

EDUCATION

Saint Mary's College of California July 2019 to Dec. 2020
Masters of Science Business Analytics 2020
California, United States

University of Delhi
BA Business

SUMMARY

MS in Business Analytics with over 1.5 years of experience in the relevant industry.

I am a highly analytical and creative Business Analyst with a special talent for analyzing tasks and evaluating the business process needs.

--- Experience in Data querying and manipulation using SQL, R, Python, SAS, Excel
--- Solid knowledge in Data Handling using Data Researching, Data Mining, Data Modeling.
--- Experience with Data Visualization using Tableau Dashboard, Excel.
--- Well-versed with NLP, Machine Learning models such as Regression, Random forest, Logistic Model, Predictive and Descriptive Models.
--- Experience in data mining, data modeling, statistical analysis, business intelligence gathering, trending, and benchmarking. Data analytics supports decisions for high-priority, enterprise initiatives involving IT/product development, customer service improvement, and process reengineering.

Data Mining and Modeling: collected, cleaned, and provided modeling and analysis of structures and unstructured data used for major business initiatives, outcomes:

- Reduced a turnaround time for the classification of customer queries-based text messages.
- Created customer personas using K-means clustering based on behavioral and spending data and identified the under-served user segments with potential business opportunities.

Dashboards: Created visual impactful dashboards in Excel and Tableau and Data visualization using Python and R script libraries like GGPlot 2 and Matplotlib, Extracted, Interpreted, and analyzed data to identify key metrics and transform raw data into meaningful, actionable information.

SKILLS

Data Analysis, Python, SQL, SAAS, AMPL, Business Analysis, R, Data Modeling, Data Visualization, NLP, Machine learning, Tableau, Agile methodologies, Microsoft PowerPoint, Microsoft Excel

EMPLOYMENT

BIZTRUSS (TOTAL DURATION: 1 YEAR 5 MON)

Data Analyst

Project - Customer Text Classification using ML/AI

The financial institution receives hundreds and thousands of messages via various sources (mobile apps, desktop apps, web forms, etc) in a day. It was required by the departments to manually classify these messages for respective departments. Thus, it was extremely time-consuming and cost-ineffective process. We had built for our client an automated process to classify the data and further send them to respective departments with over 95% accuracy using historic data.

-Tools/Languages:

- R Script
- R Studio Server
- NLP
- Sentiment libraries
- LDA, Random Forest, DNN, Data Text matrix (DTM)

-Work and duties-

- Build R libraries for other developers from GUI / backend teams to consume
- Data Cleaning to remove the noise from the raw data
- Write test cases for R libraries

Project - KMeans Clustering in Customer Segmentation(retail client)

- Built data pipelines & defined customer behavior metrics from terabyte-scale usage data on Google Cloud Platform
- Established a churn prediction model in Python using survival analysis to re-engage slipping away customers
- Created customer personas using K-means clustering based on behavioral and spending data and identified the under-served user segments with potential business opportunities.
- Identified user experience pain points by ETL & Natural Language Processing (sentiment analysis & topic modeling) on the user feedback forum data

Project - Insurance predictive modeling for fraud detection

- Apply different Machine Learning algorithms/methods on auto insurance data set to predict if an insurance claim is fraudulent or not
- With the prediction data estimated the total predicted fraudulent claim amount and zoom into various features such as a breakdown of predicted fraud count by including behavioral data - our model's best predictor.
- Work on text mining technology to read and analyze claim notes and identify trends and patterns associated with certain keywords.
