EDUCATION

Master of Science in Computer Science

San Jose State University

Aug 2023 – May 2025

GPA: 3.6/4.0

Bachelor of Science in Computer Science

Jawaharlal Nehru Technological University

Aug 2017 – May 2021

GPA: 3.9/4.0

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Go, SQL, Java, C/C++

AI & Data: LLMs (OpenAI, Anthropic), Model Orchestration, Data Extraction, Classification Pipelines, Vector Databases

Cloud & DevOps: Google Cloud Platform, Docker, Kubernetes, AWS (EC2, S3, Lambda), CI/CD (Jenkins, GitLab)

Databases: Postgres, MongoDB, Redis, Elasticsearch

Frameworks: FastAPI, React, Flask, Node.js, Spring Boot, Kafka

EXPERIENCE

Software Engineer Intern

Oct 2024 – Dec 2024

Ruby Card (Y Combinator W23 · Neobank)

Remote, USA

- Built Python/FastAPI backend with LLM-powered classification pipelines processing 50K+ daily payment webhooks; deployed on GCP with Docker achieving 90% faster reconciliation using vector database fuzzy matching
- Orchestrated multi-step data extraction workflows with model chaining for payment parsing, deduplication, and idempotent processing across distributed databases
- Shipped TypeScript/React monitoring dashboard with WebSocket real-time updates enabling \$50K+ payment recovery within 24 hours

Software Engineer

Jun 2021 – Jun 2023

Temenos (Banking SaaS · \$1B+ Revenue)

Hyderabad, India

- Built Python/FastAPI microservices on AWS processing 500K+ daily API calls with OAuth 2.0; achieved 150ms latency and 99.9% uptime for 500+ enterprise clients
- Designed Kafka/PySpark data pipelines processing 50GB+ daily transactions with classification logic and idempotent consumers; reduced processing latency to under 5 minutes
- Automated Spring Boot microservice generation with AWS CloudFormation templates, reducing creation time by 70% and accelerating feature delivery
- Enhanced CI/CD pipelines integrating GitLab with Jenkins and automated security updates via Renovate Bot, catching 90% of vulnerabilities pre-production

Software Engineer Intern

Dec 2020 – May 2021

Thomson Reuters (Legal Tech · NYSE: TRI)

Hyderabad, India

- Built Flask/React document processing API with ML classification models handling 10K+ monthly documents; automated 300+ hours/month saving \$45K annually
- Optimized Postgres queries with indexing and prepared statements, reducing execution time by 45% and improving API latency by 30%
- Enhanced Elasticsearch service processing 100K+ daily queries; improved search relevance by 25% through ranking optimization and A/B testing

PROJECTS

Agentic Healthcare AI Platform

Jun 2024

- Built FastAPI backend orchestrating LLM agents (CrewAI/AutoGen) for clinical assessments and triage; automated 40% of workflows with 95%+ accuracy on FHIR data
- Deployed React/TypeScript frontend on Kubernetes with Prometheus/Grafana observability; achieved sub-second API latency across production workflows

E-Commerce Microservices Platform

Mar 2024

- Built Spring Boot APIs and React storefront supporting 10K+ products and 500+ daily orders with sub-second response times via Redis caching and query optimization
- Implemented Kafka event-driven architecture for order processing and inventory management with retry logic and idempotent message handling
