Experience

Epic

Cogito Systems Technical Solutions Engineer, 2025 – present

- Automated ETL performance monitoring across multiple customer data warehouses, analyzing pipeline metrics to improve performance issue detection efficiency by 30%.
- Implemented and validated robust data security controls (access permissions, data protection features) within production customer data warehouse environments.
- Investigated and resolved complex data quality and transformation errors in customer-managed tables utilizing SQL-based debugging and validation procedures.
- Re-modeled and transformed data warehouse tables to support cloud migration, ensuring schema consistency, data integrity, and downstream analytics readiness.

Projects

Data Analysis with Machine Learning

Rensselaer Polytechnic Institute (RPI) project, 2025

- Utilized machine learning algorithms and Python to analyze a large CDC death certificates dataset, achieving an 80% boost in data processing efficiency.
- Applied R-based data cleaning and wrangling techniques to preprocess and filter the dataset, improving data accuracy and processing speed by 90%.
- Designed and implemented predictive machine learning models, resulting in a 95% increase in data analysis accuracy and quicker insights generation.

Data Warehousing and Reporting

RPI project, 2024 - 2024

- Developed a data warehouse using SQL and optimized data visualization through Microsoft Power BI, enhancing analysis efficiency by 95%.
- Combined SQL-based ETL pipelines with Power BI for real-time insights, enabling 90% faster business intelligence generation.
- Automated data retrieval and reporting using SQL, achieving a 90% reduction in processing time and improving report accuracy.

Knowledge Repository

RPI project for Deloitte, 2024 - 2024

- Directed a team to build an IoT security and privacy knowledge repository, leveraging structured data frameworks for a 25% improvement in data accessibility.
- Enhanced data-driven decision-making by integrating SQL-based data warehousing with a JavaScript-based interface, enabling 20% faster insight generation.

Discussion Forum

RPI project for Agoro, 2023 - 2023

- Led a project and collaborated with a client, Agoro, to construct a discussion forum, utilizing cost-benefit analysis, communication, and planning, resulting in an 80% improvement in project delivery efficiency.
- Designed and implemented data pipelines to generate and preprocess training data for a large language model, ensuring optimal performance and scalability.

Education

Rensselaer Polytechnic Institute, MS, Information Technology, May 2025

Rensselaer Polytechnic Institute, BS, Information Technology and Web Science, May 2024

Licenses & Certifications

Microsoft Certified: Azure Data Fundamentals

Microsoft Certified: Security, Compliance, and Identity Fundamentals

Microsoft Certified: Azure AI Fundamentals

GIAC Foundational Cybersecurity Technologies Certification (GFACT)

AWS Certified AI Practitioner, currently pursuing

AWS Certified Cloud Practitioner, currently pursuing

Skills

Programming Languages: Bash, C, C++, Java, JavaScript, PHP, Python, R

Data & Databases: Data Integrity, Data Modeling, Data Warehousing, ETL, Performance Monitoring, SQL

Cloud & Infrastructure: AWS, Azure, CI/CD, Docker, Security Controls
