SUMMARY:

Results-driven Data Engineer with 4+ years of experience in designing, building, and optimizing big data solutions. Expertise in Hadoop, Py Spark, Apache Kafka, Hive, Snowflake Cloud, and AWS. Skilled in Extract, Transform, Load (ETL), Azure Data bricks, Data Pipelines, and Apache Airflow. Proficient in SQL. Python, Map Reduce, Azure Data Factory, and Amazon Redshift, with a strong background in real-time streaming and cloud-based data processing. Passionate about building scalable data solutions that drive business impact.

EDUCATION:

Master of science in Business Analytics | University of Colorado Denver , United States **Bachelor's in Electronics and communication Engineering** | Gudlavalleru Eng college, India

SKILLS:

- **CloudServices:** AWS(s3,EMR,EC2,Redshift,Athena,Lambda,RDS,Glue,DDB, step function, Elastic search), Azure, GCP, Snowflake
- **Technologies:** Hadoop, spark, Hive, Sqoop, NIFI, Kafka, Airflow
- **DataWarehousing:** Redshift,Bigquery,Schemadesign(star schema, snowflake schema), Teradata
- **DevOps:** CI/CD ,Terraform, ,Kubernetes ,Docker
- **Source control & Agile:** Git, GitHub, JIRA
- **VisualizationTools:** Tableau,powerBI,looker,Quick Sight
- **Languages:** Python, SQL, Scala, Power shall
- **Database:** MySQL,MongoDB,DynamoDB,Postgres SQL, snowflake, Casandra
- **Security & Compliance:** Aws IAM, Aws KMS
- **Monitoring Tool:** AWS CloudWatch. Cloud Trail

PROFISSIONAL EXPERIENCE:

Data Engineer | Smarc solutions Inc ,CA

Mar 2025 - present

- Developed and maintained ETL pipelines using Python and various data manipulation libraries (such as Pandas, NumPy, and Py Spark) to extract, transform, and load data into Snowflake data warehouse.
- Built and optimized complex SQL queries in Snowflake to perform data analysis, data modeling, and data aggregation tasks.
- Automated data processing tasks by leveraging Python scripts, Airflow, or other similar tools, reducing manual effort and improving the efficiency of data pipelines.
- Participated in assisting the Business team with data profiling, data quality, and analysis of the company's data.
- Analyzing data access patterns and designing data structures to optimize data retrieval, storage, and processing performance in distributed computing environments (e.g., Hadoop, Spark).
- Implemented a 'serverless' architecture using API Gateway, Lambda, and Dynamo DB and deployed AWS Lambda code from Amazon S3 buckets. Created a Lambda function and configured it to receive events from your S3 bucket.
- Worked on AWS CLI Auto Scaling and Cloud Watch Monitoring creation and update.
- Implement data governance strategies and ensure compliance with data privacy and security regulations.

Data Engineer | Dish ,TX.

Aug 2023 – Mar 2025

- Engineered real-time streaming solutions using Apache Kafka and Spark Streaming, processing 2+ TB of data .
- Built a real-time analytics platform using Kafka, Py Spark, and S3, cutting query resolution time by 40%.
- Designed & automated ETL pipelines using AWS Lambda, Step Functions, and redshift, ensure 99.9% up time.
- Implemented Apache Airflow for scheduling Hadoop-based batch processing workflows.
- Integrated AWS services (S3, Lambda, Athena) for scalable data storage and processing.
- Developed and optimized Spark jobs on EMR, improving Hadoop-based ETL workflows and reducing cloud costs by 20%.

Big Data Engineer | SRM Tech Pvt Ltd ,India

Mar 2020 – Aug 2022

- Configured Apache Kafka and Azure Event Hubs for real-time data streaming and processing.
- Developed Map Reduce and Swoop-based data ingestion solutions for Hadoop ecosystems.
- Managed Azure HD Insight clusters and optimized Hive queries, improving data retrieval speeds by 30%.
- Designed Azure Data Factory pipelines to efficiently extract and transform data from Amazon S3 and ADL.
- Built Scala-based ETL workflows in Azure Databricks, reducing data transformation time by 50%. **PROJECTS:**

Real-Time Data Processing Platform

- Developed a real-time data pipeline using Apache Kafka, PySpark, and Amazon S3, enabling sub-second analytics.

AWS Data Lake Implementation

- Designed a Snowflake Cloud-based data lake architecture using **Amazon S3** and **AWS Glue**, improving storage efficiency for 5+ TB of data.
- Automated data ingestion using Scala-based ETL workflows in Amazon EMR or AWS Glue Jobs, reducing manual intervention by 70%.

DevOps Integration for ETL Pipelines

- Implemented an ETL framework using Apache Airflow and Amazon Redshift, improving data reliability and reducing processing time by 60%.
- Migrated Hadoop workloads to AWS S3 and Snowflake Cloud, optimizing performance and storage costs.
