

TARUN DONDA

+1 (502) 795-6850 | donda.tarun.data@gmail.com | [Linkedin](#)

SUMMARY

Results-driven Data Analyst with expertise in data manipulation, statistical analysis, and visualization techniques. Proficient in SQL, and Python, adept at deriving actionable insights from diverse datasets. Skilled communicator, translating technical findings into strategic recommendations for stakeholders.

SKILLS

Programming Languages: Python (Libraries: Pandas, NumPy, Seaborn, Scikit-learn, Matplotlib, TensorFlow, PyTorch, Keras, PySpark, Transformers, BeautifulSoup, Selenium, Dask), R (Visualization), SQL, JavaScript, ReactJS, HTML, C.

Databases: MySQL, Oracle, PostgreSQL, MongoDB, SQL server.

Visualization Tools: Tableau, Power BI, MS Excel, D3.js.

Tools and Cloud Technologies: AWS, Oracle Data Modeler, Hadoop, Git, Docker, JIRA

Analytical: Time Series Analysis, NLP, Data Scraping, Data Wrangling, Feature Engineering, Statistical Analysis.

WORK EXPERIENCE

Little John's Derby Jewelry

Louisville, Kentucky, USA

Business Analyst

Sep 2023 - present

- Conducted customer segmentation using **Python (Pandas, Scikit-learn)**, **SQL Server**, and **Power BI** to analyze demographics and purchase behavior, enabling personalized marketing campaigns that increased engagement and conversion rates by **18%**.
- Developed sales forecasting models using **Python (statsmodels, Prophet)** and **Time Series Analysis**, deployed through **Jupyter Notebooks**, accurately predicting peak demand periods and improving stock planning accuracy.
- Collaborated with **high-value** jewelry vendors to source inventory on a memo basis, tracked inventory turnover using **Excel**, **Power BI**, improving product availability without upfront capital and **reducing financial risk** from unsold stock liabilities.
- Collected and analyzed customer feedback from online reviews, surveys, and in-store comments using **Python (TextBlob, NLTK for Sentiment Analysis)**, **Excel**, and **PowerBI**, delivering actionable insights that led to enhancements in customer service and a measurable increase in satisfaction rating.

Grasp Technologies Pvt. Ltd

Pune, INDIA

Data Analyst

August 2022 - July 2023

- Developed and implemented predictive models using **Python (Pandas, NumPy, scikit-learn)** after comprehensive **EDA** to forecast patient admission patterns and optimize inventory of medical supplies, reducing carrying costs by **20%** while ensuring uninterrupted availability of essential items.
- Optimized relational database infrastructure using **SQL Server** by restructuring tables and optimizing SQL queries, improving data retrieval speed across patient and clinical information systems.
- Designed and deployed real-time **PowerBI dashboards** for monitoring **KPIs** such as outpatient volume, treatment adherence, and diagnostic turnaround times, enabling hospital administrators to act on insights and achieve a **15%** boost in patient care efficiency.
- Leveraged **Google Analytics** to evaluate patient engagement on hospital websites and appointment portals, identifying user behavior patterns that informed digital strategy improvements and increased portal usage.
- Utilized **Power BI (with DAX)** and **Microsoft Excel** for advanced healthcare reporting, budgeting, and operational performance reviews, enhancing decision-making and accuracy in administrative tasks.

- Collaborated with cross-functional IT teams to design and deploy interactive **PowerBI dashboards**, integrating data from over 5 enterprise systems (ERP, CRM, and ticketing tools) to streamline stakeholder reporting.
- Automated repetitive **data processing tasks using Excel VBA**, addressing formatting and validation inconsistencies across operations reports.
- Utilized **Python (Pandas)** for cleaning and transforming client-provided raw datasets, ensuring compatibility with custom software solutions and accelerating model deployment by 3 days per project.
- Developed and maintained **data governance documentation in Confluence**, creating 10+ standardized templates for metadata, **API** field definitions, and integration logs, reducing new developer onboarding time by **20%**.
- Supported the development and validation of **predictive analytics models** using regression techniques for client-facing applications, benchmarking accuracy against legacy KPIs and reducing forecast deviation by 12 units monthly.

PROJECTS

U.S. Electricity Market Analysis

- Analyzed a dataset comprising 60,000 records from the U.S. electricity market spanning 2010 to 2023.
- Employed API data retrieval, transformation, and cleaning techniques to prepare comprehensive datasets for analysis.
- Preprocessed the data for null values handling and label encoding for machine readability.
- Compared to Linear Regression and Random Forest for predictive modeling; Random Forest achieved higher accuracy (R2: 84.3% vs. 68.9%) and lower error (MSE: 2.45 vs. 8.17).

Spark-y Rock Anthem : Song Lyrics Generator - Big Data | Spark | Dask | LSH

- Compiled comprehensive dataset comprising 800,000 song tracks, totaling 17 GB in size. The dataset encompasses basic song information scraped from the Spotify API and lyrics obtained through the Genius API using BeautifulSoup library
- Implemented MinHashLSH search algorithm to facilitate song browsing based on user input of lyrics. Additionally, curated song lyrics generator utilizing GPT-2 model, generating top-notch lyrics tailored to user preferences.

EDUCATION

University of Louisville - Master of Science in Business Analytics Louisville, USA	
GPA: 3.78 / 4	August 2023 - July 2024
Osmania University - Bachelor of Business Administration Hyderabad, India	
GPA: 3.2 / 4	June 2019 - July 2022

CERTIFICATIONS

- **Data Analysis** - Google Data Analytics Professional
- **Google Analytics**
- **The Trade desk edge academy foundation** - Marketing Foundation
