SUMMARY

- Seeking a data analyst role to leverage my expertise in **data analytics** and **visualization**, delivering impactful insights in a dynamic environment
- **5+ years** of experience in the IT industry as data analyst and mainframe developer
- Worked extensively in the **banking & financial domain** for leading U.S. banks
- Experienced working on **large and complex data sets**
- USA **Master's** degree holder in Data Science
- Experienced in writing **SQL** queries for data extraction, validation & analysis
- Experience in using **python** and **R** tools for exploration data analysis (**EDA**)
- Ability to analyze complex data & present in an understandable format using **Tableau & Power BI**
- Presented high impact overviews for various projects to the leadership team, effectively communicating insights and driving informed decision-making
- Experience in working with **Waterfall & Agile** methodology
- Fast learner, problem-solver, collaborative team player, committed to meeting deadlines with evolving priorities, self-motivated, strong critical thinking and analytical skills.

EDUCATION

University of Nebraska Omaha

Master of Science, Data Science (GPA: 3.7/4)

Nebraska, USA

Jan 2021 - Dec 2023

Relevant Coursework: *Business Intelligence, Tools for data analysis, Probability & Statistics, Business Forecasting, Data visualization, Introduction to data science, Data Mining, Information data management.*

Jawaharlal Nehru Technological University

Bachelor of Technology, Information Technology (GPA: 7.5/10)

Hyderabad, India

Sep 2010 - June 2014

TECHNICAL SKILLS

Languages: SQL, Python, R, Cobol, JCL

Packages: NumPy, Pandas, Matplotlib

Database: DB2, Relational databases

Tools: Tableau, Power BI, MS Excel (VLOOKUP & Pivot), PowerPoint, Word, Access

IDE: Jupyter Notebooks, R- Studio, SQL Server, JIRA

CERTIFICATIONS: Tableau Desktop Certified

May 2020

GRADUATE PROJECTS

Analysis for Nebraska's Tech Sector

Aug 2023 – Dec 2023

- Analyzed the growth of the tech sector for Nebraska Tech Collaborative (NTC), comparing it to other states by examining how demographics and various factors impact technology growth
- Analyzed complex data sets from IPUMS for the U.S Census data and created a concise set of data tables while retaining the integrity of data using Python
- Designed dashboards for NTC to visualize the impact of the demographics on the growth of tech workers and non-tech workers & for profits in business investment decisions.
- Published a Tableau dashboard, accessible on the website <https://nebtechcollab.com/dashboard/>

Fossil fuel consumption and price

Jan 2023 – May 2023

- Analyzed the consumption of fossil fuels (Electricity, Gas and Coal) and price variations for different states in the US in comparison to trends during the COVID-19 pandemic
- Performed data cleansing using R tool for sample data considered from public domain

- Developed a Power BI dashboard to visualize price trends & compare growth across recent years

IMDB Data analysis

Aug 2022 – Dec 2022

- Python based Web scrapping the IMDB database to extract movie data.
- Leveraged libraries such as beautiful Soup for data extraction. Performed comprehensive data cleaning using Pandas to handle missing and duplicate values.
- Conducted EDA to uncover the trends and insights based on genres.
- Designed visually compelling data visualization to communicate effective findings, showcasing patterns and key takeaways from dataset.

Data Mining for Heart disease prediction:

Jan 2021 – May 2021

- Conducted an in-depth analysis to predict heart disease by identifying key signs & risk factors
- Performed data preprocessing & frequency comparison to explore relation between various predictors using python.
- Tested multiple machine learning models to evaluate predictive accuracy with logistic & linear regression emerged the most effective model yielding good interpretable results.
- Analysis provided insights into key factors like chest discomfort being the primary sign of heart disease.

PROFESSIONAL EXPERIENCE

Cognizant Technology Solutions

Client: Northern Trust

Dec 2016 - Jan 2020

- Worked as data analyst on streamlining the database for all unused data for cards and payments
- Utilized various SQL queries to extract, transform and manipulate data, followed by validating the transformed data to ensure correctness of results
- Used queries to efficiently purge redundant and unused data from the database, adding enhancements to existing card members as per requirement
- Created detailed reports and documentation of the workflow using MS Excel to ensure it can be easily understood by downstream teams

Client: Key Bank

Oct 2015 - Nov 2016

- Worked on deconstruction and understanding existing functionality before upgrading and creating multiple SFTP jobs with COBOL, SQL to load data to target applications
- Worked in migrating the database to Oracle & Cobol to Ab-Initio in SIEBEL teams to help them understand DFSORT & QMF codes & provided design inputs
- Worked closely with end user teams like GL, HOGAN and CMOD to ensure data is received
- Implemented projects in Agile methodology by logging efforts on JIRA board and attending daily stand-up scrum calls
- Documented detailed reports of the changes and implementations for each project

Client: American Express

Sep 2014 - Aug 2015

- Demonstrated proficiency in writing complex SQL queries for DB2 database & building reports
- Supported database teams to successfully run the mainframe/Db2 jobs and did validation of new database records.
- Understanding of the DB2 database environment and working closely with clients on the requirements and modifying the databases based on their inputs.
- Created packages for promotion and deployment for pre-implementation activities for smooth deployment of code
