Professional Summary

Full Stack Java Developer with 3+ years of experience designing and delivering scalable, secure, cloud-native financial applications. Skilled in Java 17+, Spring Boot, React, Next.js, GraphQL, and modern microservices architectures. Strong expertise in distributed systems, event-driven design, caching strategies, CI/CD automation, and security compliance. Adept at optimizing performance, improving deployment efficiency, and enhancing system reliability through advanced DevOps, cloud, and testing practices in high-volume, mission-critical environments.

Technical Skills

Front-End: HTML5, CSS3, JavaScript (ES6+), TypeScript, React (v18+), Angular (v16+), Redux Toolkit, Tailwind CSS, Responsive Web Design, Web Accessibility (WCAG), Next.js, REST/GraphQL APIs, Performance Optimization

Back-End & Middleware: Java (17+), Spring Boot (v3+), Spring MVC, Spring Security, Spring Data JPA, Hibernate, Microservices Architecture, RESTful & gRPC APIs, OWASP Secure Coding, OAuth2, JWT, OpenID Connect, API Gateway, Event-Driven Architecture, CQRS, Caching Layers

Database & Storage: PostgreSQL, MySQL, Oracle, MongoDB, Redis, Cassandra, DynamoDB, Liquibase, Flyway, Indexing Strategies, Query Optimization, Database Sharding, Caching Strategies, Replication, Backup & Recovery, Distributed Databases, ACID & CAP Principles, High Availability, Performance Tuning

DevOps & Cloud: Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, AWS (ECS, Lambda, RDS, S3, CloudFront), Azure App Services, CI/CD Pipelines, ArgoCD, Helm, Nginx, SonarQube, Prometheus, Grafana, ELK Stack

Tools & Testing: Git, GitHub, GitLab, IntelliJ IDEA, Postman, Swagger/OpenAPI, JUnit 5, Mockito, Selenium, Cypress, Cucumber (BDD), Pact, Jira, Confluence, Agile/Scrum, DevSecOps, Code Reviews, Security & Cost Optimization

Professional Experience

Full Stack Java Developer, Citigroup

Aug 2024 – Present | Remote, USA

- Architected modular micro frontends using Next.js and TypeScript, integrating GraphQL APIs for real-time portfolio visualization, increasing investment monitoring efficiency by 38% for high-value institutional clients.
- Engineered high-throughput trading microservices with Java 21, Spring WebFlux, and Cassandra, supporting peak loads of 240K+ orders per hour with zero downtime during market volatility.
- Implemented distributed caching using Hazelcast and advanced indexing strategies in Oracle, reducing settlement query execution time by 62% and improving data retrieval for complex portfolio calculations.
- Automated multi-stage CI/CD pipelines with GitHub Actions, ArgoCD, and Helm, enabling blue-green deployments across three cloud regions, cutting release cycle time from 14 hours to 5 hours.
- Integrated fine-grained security using SAML, mTLS, and encrypted API Gateway policies, hardening payment routing services and meeting SOX, SOC2, and PCI-DSS audit compliance requirements.
- Designed resilient observability stack with OpenTelemetry, Prometheus, and Grafana, improving issue detection speed by 54% and enabling predictive alerting for algorithmic trading anomalies.

Software Developer, HCLTech

Oct 2020 – Dec 2022 | Remote, India

- Developed secure microservices using Java 17, Spring Boot 3, and PostgreSQL, enabling a real-time loan approval engine processing 35K+ daily transactions with strict compliance and data integrity.
- Implemented responsive React 18 and TypeScript front-end dashboards integrating REST and GraphQL APIs, improving customer onboarding efficiency by 41% while meeting WCAG accessibility and performance benchmarks.
- Optimized PostgreSQL queries, Redis caching strategies, and indexing layers, reducing statement processing latency from 820 ms to 290 ms for high-volume financial transaction pipelines across multiple branches.
- Automated CI/CD pipelines with Jenkins, Kubernetes, achieving stable deployments in under 11 minutes and lowering release rollback incidents by 32% across distributed environments.
- Integrated OAuth2, JWT, and OpenID Connect authentication modules, securing payment APIs for 1.3 million+ daily users while ensuring compliance with PCI-DSS and OWASP security standards.
- Designed event-driven architecture using Kafka and CQRS for payment settlement workflows, ensuring fault-tolerant transaction handling and maintaining consistent SLA adherence across critical banking systems.
- Built and maintained comprehensive JUnit 5, Mockito, and Cypress test coverage, increasing automation reliability to 92% and reducing critical defect leakage by 36% during UAT cycles.

Education

Master of Science, Wilmington University
Information Systems and Technology

Jan 2023 and Dec 2024 | Delaware, USA

Bachelor of Engineering, Jain University
Computer Science and Engineering

Jul 2018 – Jun 2022 | Karnataka, India
