Summary

Skilled Data Engineer specializing in e-commerce, healthcare, and enterprise analytics, with expertise in SQL, Python, Spark, AWS, and ETL pipelines to enhance data quality, boost efficiency, and cut costs for clients.

Experience

Walmart

Sep 2024 – Present

Data Engineer

Dallas, TX

- Designed and implemented ETL pipelines to integrate sales, inventory, and customer data from online and in-store channels, reducing data processing time by 65% and enabling near real-time analytics.
- Developed dynamic Power BI dashboards to monitor store performance, product availability, and regional sales trends, improving supply chain visibility and decision-making efficiency by 40%.
- Migrated data from legacy retail systems to a cloud-based data lake using Azure Synapse, ensuring data accuracy and reducing reporting delays by 55%.
- Identified and resolved data quality issues across inventory and fulfillment systems using SQL and PySpark, reducing stock discrepancies and reconciliation time by 35%.
- Collaborated with operations and merchandising teams to define standardized retail KPIs, streamlining reporting across hundreds of store locations.

Tata Consultancy Services(TCS)

Feb 2022 – Jul 2022

Associate Data Analyst

Hyderabad, India

- Engineered automated ETL workflows using SQL, Python, and Databricks to process patient records and claims data, enhancing pipeline reliability, reducing processing time by 40%, and aligning with HIPAA and GDPR.
- Created Power BI dashboards to track clinical KPIs, appointment volumes, and claim processing times, improving operational visibility and aligning reporting with governance and compliance standards.
- Deployed AWS services including S3, Glue, and Lambda to build secure, HIPAA-compliant data pipelines, enhancing data accessibility, enforcing role-based access controls, and reducing infrastructure costs by 30%.

Inpixon

Sep 2020 – Jan 2022

Data Analyst

Hyderabad, India

- Integrated APIs with client databases and streamlined ETL workflows using SQL, Python, and Informatica, improving data accessibility by 30% and achieving 99% data accuracy for reporting.
- Built automated data pipelines using Apache Airflow to improve revenue analysis, delivering a 15% increase in actionable insights across six business units.
- Created real-time dashboards in Looker and Power BI to track KPIs, enabling faster operational decision-making and boosting reporting efficiency by 25%.
- Conducted ROI analysis on marketing spend using SQL and Python, uncovering cost-saving strategies that improved return on investment by 20%.
- Developed interactive revenue tracking dashboards for cross-functional teams, streamlining performance monitoring across marketing, finance, and operations.
- Collaborated with stakeholders in IT, Operations, and Finance to apply predictive analytics and data modeling, enhancing process efficiency and informing strategic planning.

Skills

Programming : Python, SQL, R, C, DSA.

Framework : Apache Spark, PySpark, SparkSQL, Apache Iceberg.

Cloud Technologies : AWS(EC2, Glue, EMR, IAM, S3, Lambda, VPC, RDS, CloudFormation), Azure, GCP.

Big Data : Hadoop, HDFS, Hive, Data Warehouse, NoSQL

Data Platforms : Databricks, Apache Airflow, Teradata, Delta Lake, Snowflake.

DevOps Tools : Github, Jenkins, Unix/Linux

Other : Data Analysis, Data Modelling, ETL optimization, Spark tuning, Data Lineage, Data Glossaries.

Education

University of Texas at Dallas

Dallas, TX

Master of Science (M.S.) in Information Technology and Management

Aug 2022 – May 2024

Certifications

AWS Certified Solution Architect
