

PRAGASH VIJAYARAGAVAN

Address : 303 West Squire drive, apt 1,
Rochester, NY, 14623

Ph : (585)-764-4662
Email : pxv3620@rit.edu

Objective :

Seeking a Fulltime position where my software engineering skills are challenged and utilized. (From : May 2017)

Education :

Rochester Institute of Technology (RIT)		Rochester, NY
Masters in Computer Science	GPA : 3.33/4	May 2017
<u>Courses</u> : Python, Java, Computer Science Theory, Distributed Systems, Algorithms, Intro to Big Data, Computer Graphics, Intelligent Systems, Foundations of Networks, Cryptography		
SSN College Of Engineering, (SSN)		Chennai, India
Bachelor of Technology in Information Technology	GPA : 7.36/10	June 2012

Skills :

OS and Languages : Linux, Windows, Python (preferred), Java, TCL, expect scripting.

Web and Databases : HTML, XML, MySQL, MongoDB, CGI scripting.

Networking : L2/L3 basics, TCP/IP, Switching, QoS, Spanning Tree, VLAN, ACL, Trunking, EtherChannel, VPC, TCP, UDP, FEX, RIP, OSPF, SDN OpenFlow (theoretical), ISSU, IP addressing, Data Center, IXIA (traffic generator), knows about HSRP, DHCP, MPLS, Multicast.

Other Tools : AutoTEST (testing framework), CDETS (bug tracking), earms (automated regression management system), pycharm, netbeans, eclipse, MS Visio, VMware vSphere, OpenStack (beginner).

Interests : Networking, Cloud computing, Virtualization, Network Security (will be concentrating on security courses for my final semester).

Experience :

Software Engineer at HCL Technologies, India

Aug 2012 – May 2015

- * Worked for almost 3 years in a Data Center project for cisco as a network protocol automation tester.
- * Automated more than 300 scripts for various platforms like Nexus 3000, 5000, 6000 and latest series Nexus 9000 switches which caught more than 50 bugs.
- * Developed CGI scripts to reduce manual interventions, Handled Automation, Regression and Sanity testing.
- * Trained incoming employees on TCL scripting and Ixia and python by conducting reviews and code challenges.
- * Beta tested py-ats framework and filed bugs and provided suggestions to improve it.
- * Deployed vms using vSphere in the data center and scripted the same.

Projects :

Amazon Dynamo :

As part of our Distributed Systems project we implemented Amazon's Dynamo using our college servers. We tried to dynamically allocated the priority N, for the data items which needed to be replicated in the ring, which is statically done by amazon servers.

Tools at Work :

- Created a tool which automated Database creation by dynamically creating a database to keep track of the automated test cases from a test plan. It saved time for my colleagues to record their completed tasks with ease.
- Created Libraries which ease up the automation process for my team mates, my QoS library was well appreciated by the client.

Sensor network analysis :

Analyzed the room temperature using real time heat sensors and Arduino and detected outliers in the network using the derived data. This project made me realize my coding skills, I coded the script for the Network Simulator and also learned to code the Arduino board which had to be connected to my laptop to get the sensor data.

Others :

- | | |
|---|------------------------------------|
| * Honored as topper of my training batch in HCL | * Member of intramural soccer team |
| * Won HCL spot award for productivity for the year 2014 | * Loves to game DOTA 2, CS |

When bored at work, reading documents of interesting technologies always amused me and instilled my passion for technology.
