Summary

Experienced Software Engineer with 3+ years in the software development industry, specializing in Java, TypeScript, and SQL database programming. Skilled in building scalable, high-performance applications with a strong emphasis on unit testing, test automation, and software quality. Proficient in modern development practices and tools, with hands-on experience in agile environments. Looking for a challenging mid-to-senior level position to leverage my technical expertise in a collaborative and growth-focused organization. Passionate about new and developing technologies, and algorithmic paradigms

Experience

March 2023 – Present

Bullhorn Inc. - Software Engineer

- Full-stack Development: Develop both front-end and back-end features using Java for server-side logic and TypeScript for building scalable automation solutions and front-end development.
- Automation and Testing: Write and maintain automated test suites using TypeScript for automation frameworks; perform unit and integration testing to ensure high-quality code delivery (Wdio, Protractor, Kafka).
- Database Development & Scripting: Design, implement, and optimize SQL queries, stored procedures, and database schemas. Write rollback and roll-forward scripts to ensure smooth database updates and changes, minimizing risk and ensuring consistency across development, staging, and production environments.
- Agile Team Collaboration: Actively contribute to agile ceremonies (sprints, daily standups, sprint planning, retrospectives) and collaborate with cross-functional teams to deliver software on time and within scope.
- Continuous Improvement: Participate in code reviews, propose improvements to development processes, and implement best practices for software design and testing.

December 2022 – March 2023

Hub Group - Pricing Analyst

- Collaborated with managerial staff to refine and optimize pricing strategies for intermodal moves.
- Provided accurate and timely rates for both long-term contract bids and daily transactional spot moves, ensuring alignment with market conditions and company objectives.
- Played a key role in the preparation and negotiation of year-long contract bids, ensuring competitive and profitable rates for the company.
- Handled collections work by actively investigating and resolving disputed rates, leveraging communication with clients and identifying relevant documentation to ensure favorable outcomes for Hub Group.
- Analyzed historical pricing data to recommend adjustments and improvements in pricing models, contributing to overall cost efficiency.

Education

Master of Science – Computer Science – DePaul University, Chicago

Bachelor of Science – Computer Science – DePaul University, Chicago

Skills

Java, JavaScript, TypeScript, Swift/SwiftUI, Python, C, C#, C++, HTML/CSS • Software Testing (Unit and Automation) • Familiar with Node, Maven • Object Oriented Programming, Data Structures, Algorithms, Database programming, REST • Agile Methodologies, Dev Ops Experience • Eclipse, IntelliJ IDEA, Xcode, Visual Studio, N++, Maven, Gradle • Adobe tools (Premier, Photoshop)
