

YASHWANTH BALAMURUGAN

Tempe, Arizona - 85282 • 602-516-3783 • yashwxnth@gmail.com • [LinkedIn](#)

EDUCATION

M.S. Computer Engineering Arizona State University, Tempe, AZ	May 2024
B.E. Electronics and Communication Engineering Anna University, India	May 2022

TECHNICAL SKILLS

Programming	: Python, C++, Java, JavaScript, SQL, R, HTML, CSS, React.
Cloud	: AWS (Lambda,S3,EC2,EMR,QuickSight), Azure, Google Cloud Platform.
Database	: PostgreSQL, MongoDB, Snowflake, Docker, CI/CD, Git, Kubernetes, BigQuery
Tools / Frameworks	: PyTorch, TensorFlow, Pandas, Tableau, Power BI, Scikit-learn, Apache Spark, Kafka, Airflow, Excel, Jupyter, Spring Boot, Kotlin, Selenium, Junit, Flask, JIRA, Postman, Rest API, Firebase.

EXPERIENCE

Software Developer Intern Imagine Marketing Pvt Ltd (BoAt India)	January 2022 – June 2022
- Developed mobile app using Kotlin integrating a voice coach module using Text-to-Speech & speech recognition for user engagement. - Executed ETL processes using Google Cloud Platform's Storage Bucket and BigQuery for data management and analysis. - Engineered alert system in Google Firebase, reducing emergency response time by 10% through semi supervised machine learning approach, bolstering safety measures.	

PROJECTS

Elemental Agenda: Context-Aware Calendar App	December 2023
- Engineered a context-aware calendar mobile app using Flutter, leveraging real-time weather data from OpenWeatherMap API to enhance daily planning, meeting readiness, and offer outfit recommendations based on meeting context. - Integrated Flutter-based frontend with Python-Flask backend, ensuring a seamless data flow from event input to personalized weather-based suggestions, resulting in a 50% reduction in synchronization time with the user's calendar.	
TLC Data Analytics using Google Cloud	September 2023
- Developed a robust data analytics solution on Google Cloud Platform (GCP) using TLC data. - Engineered a modern data pipeline utilizing GCP Storage, Python, Compute Instance, and Mage Data Pipeline Tool. - Integrated with BigQuery and Looker Studio for scalable data warehousing and insightful visualizations.	
Heart Disease Prediction Model Development and Analysis	April 2023
- Developed a prediction model for heart disease prediction using Data.Gov's medical datasets, employing Python's Pandas, Scikit-learn for comprehensive data preprocessing and feature engineering. - Applied machine learning algorithms, encompassing Perceptron, Logistic Regression, Support Vector Machine (SVM), Decision Tree Learning, Random Forest, and K-Nearest Neighbor (KNN) algorithms with optimized hyperparameters. Conducted rigorous evaluation of prediction accuracy, resulting in the establishment of a highly adaptable and robust predictive model.	
DFW Amusement Park Optimization	January 2023
- Executed data analysis on Dino Fun World amusement park operations, using Postgres, and crafted data visualizations using Tableau for optimizations. Leveraged PySal for valuable geographic insights. - Designed dendrograms using Python, R, Matplotlib, and ggplot2 for detailed visitor trajectory analysis, resulting in impactful data visualizations that substantially improved the visitor experience and overall park success.	
SmartInventory Management System	August 2022
- Engineered Inventory Management System, leveraging Python and Django framework. Designed an intuitive web interface for real-time inventory monitoring and management. - Implemented algorithms for demand forecasting and inventory optimization, enhancing operational efficiency in supply chain management.	

CERTIFICATIONS

Data Analytics Professional Certificate (Google)	October 2023
IT Security: Defense against digital black arts (Google)	May 2020
IoT Protocols and Cloud Interface using Arduino (Pantech eLearning)	September 2019
Principles of Management (NPTEL)	December 2020
