Work Experience

Software Development Engineer II

Oct 2019 - Feb 2024

Expedia, INC | SEATTLE

- Worked closely with cross-functional teams in an Agile environment to gather requirements, design solutions, and implement features efficiently.
- Designed REST APIs using Java and Spring Boot to create chatbot skill for Expedia chat users to query about their booked hotels or room's amenities.
- Automated laborious and time consuming API invokes using Python scripts.
- Utilized AWS StepFunction and AWS lambda to route the Service Request to the agent on the scheduled time.
- Built Grafana and Splunk dashboards which allowed to check the health and traffic of different services.
- Created Datadog monitors and hooked them to PagerDuty system to notify the on-call person of error alerts.
- Mentored and trained junior developers in best practices and coding standards.

Java Software Engineer

May 2018 - Oct 2019

PEAK17 CONSULTING INC | CENTENNIAL

- Engineered Backend REST and GraphQL services using Kotlin, Java, Spring Framework optimizing performance and scalability with AWS Services.
- Created performance test using JMeter and Wiremock server to evaluate performance of applications and provided performance report.
- Used CloudWatch and Splunk to log data for the purpose of searching, monitoring and analysis of data.
- Designed microservices to support cancel and relocation of hotel bookings for customer care platform.
- Ensured high code quality by conducting thorough code reviews, enforcing quality unit tests, integration tests, and providing constructive feedback to team members.
