Professional Experience

Intern

March 2015- June 2015

Cipet-Mysore, India

- Underwent extensive training in the fields of System Analysis, information Organization and Management, Information Architecture, Process design and Improvement and Business Consulting.

Education

Master of Science: Information systems

Expected: December 2016

New Jersey Institute of Technology (NJIT), Newark, NJ

GPA: 3.6/4

Enterprise Database management | System Analysis and Design | User Experience Design | Organizational Behavior | Internet Higher Layer and Protocols | Statistics | Project Management | Strategic Management | Business Process Innovation | Data Analytics Info Systems | Web Mining

Bachelor of Engineering: PS & Technology

September 2009-May 2015

Visweswariah Technological University- Belgaum, Karnataka, India

Accomplishments

- In-depth knowledge of Software Development Life Cycle (SDLC) methodologies like RUP, Waterfall, Agile.
- Developed applications using Python and MySQL for database design.
- Coordinated with the management to discuss business needs and designed database solutions accordingly.
- Analyzed SQL server environment for quality checks.
- Expertise in gathering, analyzing, and documenting business requirement documents and functional requirement specifications.
- Expertise in writing and implementing Test scenarios, Test cases, System testing, Regression testing and maintaining traceability for baseline documents.
- Expertise in achieving cost-effective production with increased quality.
- Analyzed massive and highly complex data sets, performing ad-hoc analysis and data manipulation.
- Delivered Seminar in a National Level Conference on 'Total Quality Management' in 2nd year of Engineering.
- Won 'Student of the Batch' (2009-2011) and 'Best project Leader' Award.
- Student Advisor for Undergraduate Students and Distinction Award for Academic Achievement.
- Successfully trained 25 uneducated students to use Operating System.

Certifications

- Python, PyCharm, Cassandra, MCSA-SQL 2016, Tableau

Projects

E-Commerce Website

Project leader for a group of 9 members. Created an e-commerce website (using XML, HTML, CSS) using which a customer could buy items online and updated the database accordingly (using MySQL, PHP).

Bike Sharing on Demand (Data Mining/Web Mining)

We were provided with historical rental data of bikes for of the first 19 days of each month. The task was to forecast the "Rentals" column for the test set by using data mining and analytics, given a certain set of parameters and to identify any significant pattern(s) of the result on which the driver variables have a greater impact.

Enterprise Database Management project: (Toxic Release Inventory)

This project was a depiction of Database Management in real live industry.

NJIT Parking Finder

The project addressed the overall problem of parking at NJIT. The project aims at addressing this problem by developing an app which allows the users to request for a parking spot in the campus and the app will send a notification to the user with a link to the GPS coordinates of the spot.
