EDUCATION

The George Washington University, Washington, DC

Master of Science- Data Science

Jan 2021 - Dec 2022

GPA: 3.79/4

Relevant Coursework: Data Visualization, Time Series Analysis, Machine Learning, Cloud Computing.

Great Lakes Institute of Management, Chennai India

Postgraduate in Artificial Intelligence and Machine Learning

Jan 2019 - Feb 2020

Mumbai University, India

Bachelor of Engineering- Computer Science & Engineering

July 2014 - May 2017

GPA:8.23/10

PROFESSIONAL EXPERIENCE

Amazon.com LLC, Seattle, WA | Data Engineer Intern

May 2022-Aug 2022

- Built infrastructure-driven data pipeline for understanding datasets from Elastic Data Exchange and constructing IAM Roles, Policies, S3 bucket, and AWS Batch using CDK.
- Utilized Boto3 to convert Shell Script to Python for uploading/downloading files from S3; Deployed data pipeline into production and optimized up to 60% scalability and efficiency rate by containerizing Python Script in AWS Batch, ECR/ECS

Basil Labs, Washington, DC | Data Science Intern

Sept 2021-Dec 2021

- Developed a Deep learning model to recognize the age and gender of the people from camera captured images of a shopping mall using YOLO and ResNet which helped improve their business worth ~95M.
- Utilized Latent Dirichlet Allocation algorithm to develop and visualize NLP prediction model on Stream Lit for real-time shopping centre data, which enhanced efficiency of over 70% in classifying shopping centre listings based on user feedback.

The George Washington University, Washington DC | Bioinformatics Intern

May 2021-April 2022

- Saved 24 hours of manual evaluation per day by developing a script using Python and SQL to perform data comparison and extraction of missing entities from 300K entries in 5 excel files along with visualization using Tableau.
- Identified patterns between Microbiomes with predicted training and testing accuracy of 85% and 65% using Random Forest Algorithm by prototyping machine learning model for Anterior Nares Microbiomes (Nasal) data.

Tata Consultancy Services, Mumbai, India | Data Engineer

June 2018-Dec 2020

- Developed a Predictive Maintenance ML Model using DevOps including Airflow, Kafka, ElasticSearch and Kibana.
- Performed data integration on metric beat data of 2500 entries fetched from data servers and applied feature engineering on cleaned scalable data: automated tasks for CPU utilization, file system and disk space.
- Developed a prototype for deploying ML models using Kubeflow via Google Compute, Google Kubernetes Engines, performed Extract, Transform and Load (ETL) on the raw data and applied feature engineering using PCA on cleaned data and fetched entries from 1000 Big Table records on GCP.

Tata Consultancy Services, Mumbai, India | Middleware Administrator

July 2017- May 2018

- Enhanced efficiency of customer portal by 70% for redeeming 30K+ existing customers using WebSphere aimed at resolving time sensitive production bug with precision.

TECHNICAL PROJECTS

Covid-19 ICU Bed Prediction | Python, Machine Learning, AWS [\[GitHub\]](#)

April 2022

- Performed a ML prediction on Covid-19 ICU Bed data using XGBoost Algorithm and Sage Maker with 80% accuracy.

Speech Command Recognition | Python, Computer Vision[\[GitHub\]](#)

May 2022

- Built a Neural Network using CNN, LSTM algorithm to perform keyword spotting of speech commands sourced from ESC50 dataset.

Chat Bot for Intent Recognition | Python, NLP, Hugging Face

Dec 2021

- Built a Chat Bot for recognizing the intent of the inputted user message by using Transformers (BERT, Distilled BERT, LSTM) with a predicted accuracy of 78% [\[GitHub\]](#)

TECHNICAL SKILLS

Programming Languages: Python (Numpy, Pandas, Stats models, Scikit-Learn, PyTorch) | Java | SQL

Tools/Frameworks: Docker | Kubernetes | mongo dB | PySpark | Zookeeper | Kafka | Tableau | Plotly (DASH) | NLP | Computer Vision | KERAS | TensorFlow | Flask/Django | MLOps | AWS | GCP | Jenkins | Unix | CentOS
