ACADEMIC QUALIFICATION

Master of Science in Data Science (Aug 2023 - May 2025) University at Albany, State University of New York	GPA: 3.12 Albany, USA
Bachelor of Technology in Electronics and Communication Engineering (Aug 2019 - June 2023) CVR College of Engineering	CGPA: 7.96/10 Hyderabad, India

EXPERIENCE

Health Research Inc (NYSDOH) Data Analyst Intern - Collaborated with Senior Research Scientists to Analyze New York State Occupational Health Clinic Network (OHCN) data using R, SAS, and SQL to assess occupational disease burdens, workplace exposures, workplace injuries and health disparities. - Cleaned, standardized, and linked OHCN datasets (2006-2023) involving ICD9/ICD10 codes, exposure types to improve data accuracy, statistical modeling, and reporting. - Lead analysis for the High-Risk and Low-Wage Workers Project, identifying workplace exposures, health outcomes, evaluating occupational risks and directing outreach for vulnerable workforce populations. - Conducted statistical modeling to uncover relationships between diagnoses and demographics, with a focus on identifying racial/ethnic and socioeconomic disparities critical for policy adjustments. - Developed statistical analyses (SAS, SAS Macros, R), Tableau Dashboards to track 10+ KPIs and ArcMap (ArcGIS) to analyze spatial health data and developed geographic reports, interactive epidemiological reports to support statewide public health initiatives and inform policy decisions.	Albany, New York Sep 2024 - May 2025
EFORGE NexGen INNOVATIONS Pvt. Ltd. Director and Data Analyst - Led a student startup focused on prototype conversion and product delivery across sectors like Agriculture, Environmental Sustainability, and Home Automation. - Leveraged Alteryx and Excel to blend and analyze market data using statistical techniques and data interpretation, identifying key consumer trends that contributed to a 15% increase in customer acquisition. - Developed and implemented data-driven strategies using Power BI dashboards to track 20+ marketing KPIs, informing marketing strategy and leveraging business intelligence to optimize resource allocation and boost campaign ROI by 25%.	Hyderabad, India Oct 2022 - Apr 2023
CVR College of Engineering Research Assistant - Developed and patented multiple data-driven healthcare solutions, including IoT-based weather stations and air quality monitoring systems. - Applied Predictive modeling and Machine learning techniques to environmental and health-related datasets, resulting in 3 patents published under the Government of India.	Hyderabad, India Jan 2021 - Apr 2023

PROJECTS

➤ Machine Learning Based Heart Disease Prediction R, EDA, ML GitHub - Developed a Machine Learning model By R which can predict whether an individual has heart disease based on their medical attributes. - Logistic Regression offers the highest sensitivity (0.9667) in the results, meaning it is most effective at correctly identifying individuals with heart disease. In the context of predicting heart disease, sensitivity measures the proportion of actual heart disease cases that the model correctly identifies as having heart disease.	Jan 2024 - May 2024
➤ Data Analytics Powered IoT Weather Station to Determine the AQI Index DA, ML - To Determine the Air Quality in a specific Location and to provide the information to the public about the air quality in their area. - The AQI provides a way to communicate the effectiveness of air quality management strategies to the public.	Jan 2023 - May 2023
➤ Solar Powered Weather Station using IoT DA, ML - Developed a solar-powered weather station integrated with IoT technology to predict weather and monitor pollution levels and calculate Air Quality Index using sensors. - Derived actionable insights from weather station data providing valuable information on environmental patterns and predicting urbanization trends with 85% accuracy. Enhanced decision-making through machine learning-driven insights, enabling proactive measures based on precise weather forecasts.	June 2021- Aug 2022

TECHNICAL SKILLS

Programming : Python, R Programming, SAS, SAS Macros, SQL, MySQL, REDCap
Data Analysis & Business Intelligence: ETL, NumPy, Pandas, Matplotlib, Snowflake, Scikit-learn, TensorFlow, Machine Learning, MATLAB, Power BI, Tableau, Statistical Analysis
Office Productivity & Reporting: Microsoft Word, Excel (PivotTables, VLOOKUPS), PowerPoint, Access
Additional Tools : ArcGIS

CERTIFICATIONS

- Database Programing with SQL - ORACLE
- Google Data Analytics Professional Certificate

PATENTS

- Patent published under Intellectual Property India (Government of India) in **2023**
 - “Data Analytics Powered Smart Precision Farming to Increase Crop Yield” - 202341008759.
 - “Machine Learning Powered IoT Weather Station to Predict the Rate of Urbanization” - 202341008760.
 - “Data Analytics Powered IoT Weather Station to Determine the AQI Index in a Micro Climatic Zone” - 202341027954.
