INTRODUCTION

A Rutgers CS graduate, current Software Engineer, and incoming part-time CS master's student at Georgia Tech, with experience in the design, development, and testing of both large- and small-scale software projects. Knowledgeable in multiple relevant technologies, frameworks, programming languages, and fundamental AI concepts. Possesses an understanding of operations and the Software Development Life Cycle within large corporations, thanks to years of experience at multiple industry-leading companies. Known for innovative problem-solving skills and the ability to learn new systems quickly.

SKILLS

- Java (Spring, Quarkus)
- TypeScript/JavaScript (React Frontend, Node.js, Express.js)
- Python (Django RESTful API, Pandas, NumPy, Jupyter Notebook for Python)
- SQL(PostgreSQL, OracleDB, MySQL), Familiar with NoSQL(MongoDB)
- C
- Agile methodologies
- Kubernetes
- HTML, CSS
- Postman/Insomnia (API testing), JUnit, Jest, Playwright, Cucumber/Gherkin (Software testing)
- Git/Github
- Github Copilot
- Rally for Enterprise Agile Management
- Aqua Security Docker Container Security Platform
- Drools Business Rules Language
- Github Actions for CI/CD

WORK EXPERIENCE

Technology Intern

June 2022 - August 2022

Ernst & Young Hoboken, NJ/Remote

- Developed Python scripts to use with Micro Focus Operations Orchestration tool, in order to create automated incident response workflows
- Developed REST API endpoints (using Django REST framework and Postman for testing)
- Developed scalable Python script to help optimize how employees fetched specific data within Excel files

Cloud & Network Security Engineer

September 2022 - January 2023

Ernst & Young Hoboken, NJ/Remote

- Used Aqua Security platform, in which I wrote Python scripts that performed security scans of Docker containers
- Ran compliance checks on Docker images
- Configured security checks for cloud environment

Software Engineer

January 2023 - Present

UnitedHealthGroup Basking Ridge, NJ/Remote

- Led an effort to build a modernized UI Portal from scratch (Using React Frontend Framework and Express.js) for internal Healthcare clients to see live insights into their claims data, upload and generate reports, visually see their filtered data trends in the form of various charts, and use countless other modernized features
- Designed and developed Java Spring Microservices responsible for managing and processing Healthcare Provider and Claims Data
- Built Java Quarkus repositories which processed and functioned to ingest Cloud data
- Created JUnit tests to ensure developed code was created correctly and up to professional and production-level standards
- Created numerous tests using Cucumber to evaluate JSON schemas submitted by Healthcare Providers
- Used Drools to develop and manage business rules needed for the intake of Healthcare Provider Data
- Deployed pods to Kubernetes environment using created KafkaSource files
- Worked within PostgreSQL databases to make sure data is ingested correctly

EDUCATION

Rutgers University (New Brunswick, NJ)

Class of 2022

B.S. Computer Science

Notable Courses Taken:

- Intro to Artificial Intelligence
- Data Management for Data Science
- Systems Programming
- Principles of Programming Languages
- Software Methodology
- Numerical Analysis & Computing
