Data Engineer

Professional summary:

- **5 years** of IT experience in a variety of industries working on Big Data technology using technologies such as **Cloudera** and **Hortonworks** distributions. **Hadoop** working environment includes **Hadoop, Spark, MapReduce, Kafka, Hive, Ambari, Sqoop, HBase, and Impala**.
- Fluent programming experience with **Scala, Java, Python, SQL, T-SQL** and Hands-on experience in developing and deploying enterprise-based applications using major Hadoop ecosystem components like **MapReduce, YARN, Hive, HBase, Flume, Sqoop, Spark MLlib, Spark GraphX, Spark SQL, Kafka**.
- Proficient with **Spark Core, Spark SQL, Spark MLlib, Spark GraphX** and **Spark Streaming** for processing and transforming complex data using in-memory computing capabilities written in **Scala**. Worked with **Spark** to improve efficiency of existing algorithms using Spark Context, **Spark SQL, Spark MLlib, Data Frame, Pair RDD's and Spark YARN**.
- Hands-on experience in **Azure Analytics Services - Azure Data Lake Store (ADLS), Azure Data Lake Analytics (ADLA), Azure SQL DW, Azure Data Factory (ADF), Azure Data Bricks (ADB)** etc.
- Experience working with Data warehouse like **Oracle, SAP, HANA** and databases like **Azure SQL DB, Azure SQL DW**.
- Experience in building **ETL(Azure Data Bricks)** data pipelines leveraging **PySpark, Spark SQL**. Experience in building the Orchestration on **Azure Data Factory** for scheduling purposes and Experience working with **Azure Logic APP Integration tool**.
- Hands-on experience with **Amazon EC2, Amazon S3, Amazon RDS, VPC, IAM, Amazon Elastic Load Balancing, Auto Scaling, CloudWatch, SNS, SES, SQS, AWS Lambda, EMR** and other services of the **AWS** family.
- Instantiated, created, and maintained **CI/CD** (continuous integration & deployment) pipelines and apply automation to environments and applications and worked on various automation tools like **GIT, Terraform, Ansible**.

Technical Skills:

- **Data Engineering Tools:** Azure Data Factory, Azure, Synapse Analytics, Databricks, AWS Glue, Amazon Redshift, Google Cloud Dataflow, BigQuery.
- **Data Visualization:** Power BI, Tableau, Kibana.
- **CI/CD Tools:** Azure DevOps, Jenkins, Maven.
- **Data Management:** SQL, NoSQL, Cosmos DB, Cassandra, MySQL, PostgreSQL, MongoDB.
- **Programming & Scripting:** Python (Pandas, PySpark), Scala, .NET, Java, Power Shell.
- **Data Processing & Analytics:** Spark, Hadoop, Data Bricks, Machine Learning, Stream Analytics, Power BI
- **Hadoop Components / Big Data:** HDFS, Hue, MapReduce, PIG, Hive, HCatalog, HBase, Sqoop, Impala, Zookeeper, Flume, Kafka, Yarn, Cloudera Manager, Kerberos, PySpark Airflow, Kafka, Snowflake Spark Components
- **Databases:** Oracle, MySQL, SQL Server, PostgreSQL, HBase, Snowflake, Cassandra, MongoDB.

Education:

- Bachelor in computer science, JNTUH, India.
- Masters from Trine University , USA.

March 2019

May 2024

Project experience:

Client: Wells Fargo, NC

June 2024 – Present

Role: Data Engineer

Responsibilities:

- Developing, deploying, and maintaining scalable and efficient data pipelines on **Azure** to support various healthcare data needs. This includes integrating data from multiple sources, ensuring data quality, and making it available for analytics, reporting, and operational processes.
- Utilizing **Azure services** like **Azure Data Factory**, **Azure Synapse Analytics**, and **Azure Databricks** to process and transform large volumes of healthcare data.
- Ensured **data integrity** by implementing robust validation protocols and data quality checks throughout clinical trials.
- Designed and optimized **data capture** mechanisms to streamline patient data collection processes in clinical trials.
- Developed systems for **anomaly detection**, enabling early identification of irregular patterns in clinical trial data.
- Collaborated with **research teams to perform metadata** analysis on clinical trial datasets, ensuring proper documentation and organization.
- Focused on **patient safety by analyzing and managing clinical trial data** to identify any potential safety concerns.
- Leveraged **AI technologies** to improve data processing and predictive analytics in clinical trials.
- Communicated **complex data insights to stakeholders**, enhancing communication skills in cross-functional teams.
- Maintained thorough documentation of **data processes**, ensuring transparency and traceability in clinical trial workflows.
- Ensuring that all data management processes comply with healthcare regulations (e.g., **HIPAA**) and UC Health's internal security policies. Implementing robust security measures, including encryption, access controls, and monitoring.
- Experience managing **Azure Data Lakes (ADLS)** and **Data Lake Analytics** and an understanding of how to integrate with other **Azure Services**. Migration of on premise data (**Oracle/ Teradata**) to Azure Data Lake Store(**ADLS**) using **Azure Data Factory(ADF V1/V2)**.
- Designed and created optimal pipeline architecture on **Azure** platform and Created pipelines in **Azure** using **ADF** to get the data from different source systems and transform the data by using many activities.
- Used **Azure Devops & Jenkins** pipelines to build and deploy different resources (Code and Infrastructure) in **Azure**.
- Created numerous pipelines in **Azure** using **Azure Data Factory v2** to get the data from disparate source systems by using different **Azure** Activities like Move & Transform, Copy, filter, for each, Databricks etc. Maintain and provide support for optimal pipelines, data flows and complex data transformations and manipulations using **ADF** and **PySpark** with Databricks. Automated jobs using different triggers like Events, Schedules and Tumbling in **ADF**.
- Created pipelines **CI/CD** pipelines in Azure using **ADF** to get the data from different source systems and transform the data by using many activities.
- Created, provisioned different Databricks clusters needed for batch and continuous streaming data processing and installed the required libraries for the clusters.

- Wrote data ingestion systems to pull data from traditional RDBMS platforms such as Oracle and Teradata and store it in **NoSQL** databases such as **MongoDB**.
- Developed custom **UDFs** in **python** to be used in **spark-SQL**. Utilized Elasticsearch and **Kibana** for indexing and visualizing.

Environment: API, Azure, Azure Analysis Services, Azure Synapse Analytics, Blob, Cassandra, CI/CD, Data Factory, Elastic search, ETL, Factory, HBase, HDFS, Java, Jenkins, Kafka, Kubernetes, lake, Oracle, Power BI, PySpark, Python, RDBMS, Services, Snowflake, Spark, Spark Streaming, SQL, SSIS, Teradata.

Client: SkyStone Soft Solutions PVT LTD, India

April 2019 - Nov 2022

Role: Associate Data Engineer

Description: Unilever is a global consumer goods company known for its diverse portfolio of products in food, beverages, cleaning agents, beauty, and personal care. Contributed to the design and optimization of data architectures and pipelines to enhance data analytics and reporting capabilities, facilitating seamless data integration and migration to cloud platforms.

Responsibilities:

- Developing and designing scalable, secure, and efficient data architectures on **Google Cloud Platform (GCP)** to support the insurance company's data analytics, reporting, and business intelligence needs.
- Implementing and managing **data warehouses on GCP**, such as **Google BigQuery**, to store structured and unstructured data, enabling advanced analytics and reporting.
- Integrating data from various internal and external sources, including policy management systems, customer databases, and third-party **APIs**, ensuring seamless data flow across the organization.
- Continuously optimizing data processes, improving performance, and reducing costs by fine-tuning **GCP** resources and services.
- Got involved in **migrating** on perm **Hadoop** system to using **GCP (Google Cloud Platform)**.
- Worked on Analysis and understanding of the data from different domains in order to integrate to Data Market Place.
- Developed **Pyspark** programs and created the date frames and worked on transformations.
- Working with **AWS/GCP** cloud using in **GCP Cloud storage, Data-proc, Data Flow, Big-Query, EMR,S3, Glacier and EC2** with **EMR Cluster**.
- **Continuously optimizing data processes**, improving performance, and reducing costs by fine-tuning GCP resources and services, with a focus on supporting fintech applications and SaaS solutions.
- **Analyzing data using Pyspark, Hive, based on ETL mappings**, and implementing solutions tailored for financial technology and SaaS use cases.
- Experienced in working Services like **Data Lake, Data Lake Analytics, SQL Database, Synapse, Data Bricks, Data factory, Logic Apps** and **SQL Data warehouse** and **GCP services** Like **Big Query, Dataproc, Pub sub** etc.
- Worked on analyzing the data using **Pyspark, Hive**, bases on **ETL** mappings.
- Experienced in Implementing Continuous Delivery pipeline with **Maven, Ant, Jenkins**, and **GCP**. Experienced in **Hadoop** and **Hadoop**
- Developed multi cloud strategies in better using **GCP** (for its **PAAS**) and experienced in migrating legacy systems into **GCP** technologies.

Environment: GCP, Pyspark, GCPS Data Proc BigQuery, Fintech,Saas,AWS, Hadoop, Hive, GCS, Python, Snowflake, Dynamo DB, Oracle Database, Power Bi, SDK'S, Data Flow, Glacier, EC2, EMR Cluster, SQL Database, Synapse, Data Bricks.
