SUMMARY

DevOps Engineer with 4+ years of experience designing, automating, and optimizing cloud-native infrastructure, CI/CD pipelines, and containerized workloads. Proven expertise in AWS, Kubernetes, Infrastructure as Code (Terraform, Ansible, Pulumi), and GitOps (ArgoCD, Helm) with strong knowledge of DevSecOps practices, compliance frameworks (SOX, FFIEC, GLBA), and cloud cost optimization. Adept at building secure, scalable, and high-availability systems that reduce deployment times, enhance monitoring/observability, and improve reliability across multi-cloud environments (AWS, Azure). Skilled communicator with experience collaborating across Agile/Scrum teams to deliver business-critical applications.

EDUCATION

Master of Science in Information Technology Project Management Cumberland University, Lebanon, Tennessee, USA	May 2025
Bachelor of Technology in Computer Engineering Gurunanak Institutions and Technical Campus, Hyderabad, Telangana, India	Apr 2019

SKILLS & CERTIFICATIONS

- **Methodologies:** SDLC, Agile (Scrum), TDD, DevSecOps
- **Cloud Platforms:** AWS (EC2, EKS, Fargate, S3, CloudFormation, CDK, Lambda, API Gateway, CodePipeline), Azure (AKS, DevOps, App Services)
- **Containerization & Orchestration:** Docker, Kubernetes, Helm, Docker Swarm, OpenShift
- **Infrastructure as Code:** Terraform, Ansible, Pulumi, AWS CDK
- **CI/CD Tools:** Jenkins, GitHub Actions, GitLab CI, Azure DevOps, Bitbucket Pipelines
- **Configuration & Secrets Management:** Puppet, ArgoCD, HashiCorp Vault, AWS Secrets Manager
- **Monitoring & Observability:** Prometheus, Grafana, ELK, Splunk, Datadog, Dynatrace, CloudWatch, CloudTrail, Nagios
- **Programming & Scripting:** Python, Bash, PowerShell, Ruby, YAML
- **Build & Release Tools:** Maven, Gradle, Ant, SonarQube, Trivy
- **Databases:** DynamoDB, MongoDB, MySQL, Amazon RDS
- **Certifications:** AWS Cloud Practitioner | AWS SysOps Administrator | Kubernetes CKA (In Progress)

EXPERIENCE

Citigroup	Oct 2024 – Present
DevOps Engineer	USA
• Built and deployed enterprise-grade Kubernetes clusters on AWS EKS using AWS services (EC2, S3, Lambda, CloudFormation, IAM, CloudWatch) with GitOps workflows via ArgoCD and Helm, achieving an 80% reduction in manual deployments and enabling continuous delivery for regulated financial applications. • Architected and optimized CI/CD pipelines with Jenkins, GitHub Actions, GitLab CI, CircleCI, and Bamboo, integrating automated testing, vulnerability scanning, and approval gates to ensure compliance with SOX, FFIEC, and GLBA standards. • Developed standardized Infrastructure as Code modules using Terraform, AWS CloudFormation, AWS CDK, Helm, Ansible, Puppet, and Chef to provision EC2, Fargate, RDS, and API Gateway with security baselines, increasing environment consistency and audit readiness. • Strengthened secrets management and data protection by implementing AWS Secrets Manager, HashiCorp Vault, and KMS encryption across Kubernetes clusters and CI/CD workflows, eliminating hard-coded credentials. • Enhanced observability and real-time monitoring by integrating Grafana, Prometheus, CloudWatch, ELK Stack, and Datadog dashboards, cutting Mean Time to Detect (MTTD) and Mean Time to Resolution (MTTR) by 50%. • Partnered with InfoSec to enforce DevSecOps practices, embedding container security scans (Trivy, Aqua Security) and compliance checks into pipelines for proactive vulnerability management. • Automated operational workflows and Linux administration tasks with Python, Bash, Shell, and PowerShell scripts for log analysis, instance cleanup, and performance monitoring, improving engineering productivity by 30%. • Drove cloud cost optimization initiatives, analyzing AWS usage with CloudWatch metrics and Trusted Advisor, reducing compute and storage costs by 20% while maintaining system performance.	
Palni India Pvt Ltd	Feb 2022 – Sep 2023
AWS DevOps Engineer	Hyderabad, India
• Led multiple client engagements by overseeing the end-to-end lifecycle of AWS-based deployments on Linux environments, automating infrastructure provisioning, application releases, and monitoring across development, staging, and production, resulting in a 60% reduction in manual effort. Utilized Git/GitHub/GitLab for version control and collaborated through Agile practices with Jira and Confluence. • Created and delivered serverless architectures leveraging API Gateway, AWS Lambda (Docker-based), and DynamoDB, accelerating deployment cycles and enhancing application scalability for 3 enterprise-grade, real-time data solutions, while integrating cloud networking best practices and IAM security policies. • Automated provisioning and configuration of AWS resources, including EC2, VPC, S3, SQS, and SNS using Terraform, CloudFormation, and Ansible, improving environment consistency by 70% and cutting project onboarding timelines by 40%. Added Bash/Shell scripting to streamline repetitive tasks and ensured cloud security & compliance (IAM, encryption, SOC2, HIPAA). • Built and optimized robust CI/CD pipelines with Bitbucket Pipelines and GitHub Actions, integrating SonarQube for static code analysis and Trivy for vulnerability scanning. Deployed containerized workloads via Amazon ECR to AWS Lambda and orchestrated releases using Kubernetes for cluster management and deployment orchestration, improving release quality and deployment frequency by 35%. • Developed and maintained Docker-based environments, creating reusable images and managing container lifecycles with Docker Compose and Kubernetes, leading to faster testing cycles and improved configuration portability across teams. • Migrated and consolidated 20+ repositories from Bitbucket to GitHub, implementing standardized branching strategies and release workflows to improve source code governance, collaboration, and traceability across multiple version control systems (Git, GitHub, Bitbucket, Perforce, SVN). • Implemented centralized monitoring and logging with AWS CloudWatch, Prometheus, Grafana, Datadog, and ELK Stack by setting up dashboards, metrics, and alerts to proactively detect issues, reducing MTTR by 45%, and used AWS X-Ray for distributed tracing and faster incident resolution. • Improved data security and reduced storage costs by 30% through configuring S3 bucket policies, lifecycle rules, and Glacier archiving, while implementing IAM controls and encryption to ensure compliance with NIST and client retention requirements.	
TopHat Software Technologies	May 2020 – Jan 2022
Jr. DevOps Engineer	India
• Automated infrastructure provisioning by leveraging Ansible and Puppet for configuration management, reducing environment setup time by 40% and significantly improving deployment reliability across QA and staging environments. • Implemented monitoring dashboards with Grafana, Prometheus, and Dynatrace, providing real-time performance visibility and accelerating issue detection and resolution for production workloads. • Developed automation scripts for Amazon RDS and MongoDB provisioning, including backups, access controls, and scaling workflows, improving consistency and reducing manual setup errors across staging and production. • Configured API Gateway routes, security policies, and custom endpoints to optimize API performance while enforcing security through fine-grained IAM roles, throttling controls, and monitoring for unauthorized access. • Contributed to the design and optimization of CI/CD pipelines using Bitbucket, integrating automated testing, peer code review, and deployment workflows to accelerate feature delivery in Agile sprints. • Containerized application components with Docker, enabling seamless deployments to AWS Elastic Beanstalk and Azure App Services, and improving cross-cloud portability for multi-cloud client environments. • Facilitated cross-functional collaboration during deployments and incident response using Slack and Microsoft Teams, coordinating with developers, testers, and product owners to reduce deployment lead time by 25%.
