

SUMMARY

Software Developer with **3+ years of experience** delivering backend systems, cloud-native architectures, and AI-integrated features. Effected API latency by 28%, cut cloud setup time from 6 hours to 18 minutes, and prepared inventory forecasting accuracy by 22%. Skilled in Spring Boot, AWS, Terraform, Docker, Kubernetes, and ML tools like TensorFlow. Strong background in API security, Agile, CI/CD, and test-driven development. Eager to contribute to fast-paced teams solving real-world software challenges.

TECHNICAL SKILLS

Languages: Java (8/11), Python, JavaScript, Go, Bash, SQL, C++, Solidity
Backend Frameworks: Spring Boot, Hibernate, Django, Flask, Node.js, Express.js
Web & API Technologies: REST, SOAP, WebSockets, HTML/CSS, AJAX, Swagger/OpenAPI, OAuth2, JWT, Postman
Frontend Libraries: React.js, Angular
Cloud Platforms: AWS (Lambda, EC2, S3, RDS, DynamoDB, CloudWatch), Azure, GCP
DevOps & CI/CD: Docker, Kubernetes, Jenkins, Git, Terraform, Ansible, GitHub Actions
Monitoring & Logging: AWS CloudWatch, ELK Stack, Prometheus (basic)
Machine Learning & AI: TensorFlow, Scikit-learn, Keras, PyTorch, GitHub Copilot (prompt debugging)
Testing: JUnit, PyTest, Jest, Mocha, Postman, TDD, BDD, mocking frameworks
Security: Secure coding (OWASP), input validation, API authentication (OAuth2/JWT)
ServiceNow & ITSM: Flow Designer, Integration Hub, Glide API, Orchestration
Methodologies: Agile (Scrum/Kanban), CI/CD pipelines, Sprint Planning, SDLC

PROFESSIONAL EXPERIENCE

Hyland Software, OH, USA

Software Developer

Feb 2025 - Current

- Analyzed Spring Boot microservices handling millions of API calls daily implemented backend system response time by 28% and enhanced modularity, scalability, and unit test coverage across services.
- Guided AWS infrastructure provisioning using Terraform and Ansible, decreased manual deployment time by 95%, collaborated infrastructure reliability, and revised consistent cloud resource configuration across environments.
- Developed AWS Lambda functions integrated with EventBridge and S3, enabled real-time, event-driven data processing pipelines for internal audit logging and product event orchestration.
- Created ServiceNow integrations using Flow Designer, Glide APIs, and REST connectors, revamped ITSM processes, liaised ticket resolution time by 35%, and discovered support backlog.
- Containerized backend applications using Docker and managed Kubernetes-based deployments, increased deployment frequency by 40% and assessed system fault tolerance through blue/green rollouts and proposed health checks.
- Developed secure DynamoDB + S3 storage solutions for transactional event logs, scheduled high availability, encryption at rest, and produced failover during peak operational loads.
- Collaborated in Agile cross-functional sprints with DevOps, QA, and Product teams, created velocity by 20% while maintaining compliance with CI/CD, test automation, and release documentation standards.

TJX Companies, Inc., India

Software Developer

Oct 2019 - Nov 2022

- Planned RESTful APIs using Node.js and Express.js for e-commerce platform, supported over 1 million daily users and maintained 99.99% service uptime during promotional campaigns and peak sales traffic.
- Led backend migration from Django monolith to Flask-based microservices, enhanced modular development, upgraded deployment failures, and awarded recreated testing coverage across multiple retail business modules.
- Developed ML models using TensorFlow and Scikit-learn to forecast product demand, developed prediction accuracy and decreased inventory stockouts by 22% across 300+ store locations.
- Directed real-time Angular dashboards with WebSockets to monitor backend system performance, enabled engineering teams to preemptively detect and fix 90% of bottlenecks before SLA breaches.
- Implemented Jenkins-based CI/CD pipelines with Git hooks, refined testing, and Docker image builds, spearheaded release cycle time from 5 days to 1 day across engineering teams.
- Achieved 90%+ code coverage with JUnit, PyTest, and Jest for backend modules, resolved stable and error-free releases across checkout, inventory, and product catalog services.
- Collaborated with product managers and engineers during Agile sprints to define scope, clarify use cases, and deliver backend solutions aligned with customer journey and business priorities.

PROJECTS

Intelligent IT Workflow Automation Platform
Designed serverless automation using AWS Lambda, EventBridge, and ServiceNow. revitalized incident response delays by 45% and defined SLA compliance across global IT support workflows.

Predictive Inventory Optimization Engine
Authored and deployed a machine learning model in TensorFlow to forecast product demand across 300+ stores. mastered stockouts by 22% and increased operational efficiency in inventory cycles.

EDUCATION

Master of Science in Computer Science

University of Dayton — Dayton, OH, USA

Dec 2024

Bachelor of Technology in Computer Science and Engineering

Jawaharlal Nehru Technological University (JNTU) — Hyderabad, India

Jul 2021
