

Rishitha Reddy K

Cincinnati, OH | +1 571-249-4577 | krishithareddy8@gmail.com

PROFESSIONAL SUMMARY

Data Scientist with 4+ years of experience delivering high-impact **analytics** and **machine learning** solutions across **finance**, **healthcare**, **consulting**, and **pharmaceutical** domains. Proven ability to translate complex business challenges into actionable insights through **forecasting**, **segmentation**, and **risk modeling** using **Python**, **SQL**, and cloud-based ecosystems such as **Snowflake**, **Airflow**, and **dbt**. Skilled in building **automated reporting pipelines**, developing stakeholder-facing dashboards in **Power BI** and **Tableau**, and aligning data science efforts with **go-to-market strategy**, **compliance**, and **operational KPIs**. Adept at collaborating with cross-functional teams including **underwriting**, **marketing**, **R&D**, and **supply chain** to drive data-informed decisions and measurable business outcomes.

EDUCATION

University of Cincinnati, Cincinnati, OH

Jan 2024- May

2025 Masters of Science in Information Technology

Relevant Coursework: Amazon Web Services(AWS), Google Cloud Platform(GCP), Microsoft Azure , Advanced Storage Technologies, Infrastructure sustainability , Data-Driven Cybersecurity , IT Research

TECHNICAL SKILLS

- **Programming Language:** Python, R, SQL, Scala, Java
- **Machine Learning Libraries:** Scikit-learn, TensorFlow, Keras, PyTorch, XGBoost, LightGBM
- **Big Data Technologies:** Hadoop, Apache Spark, HDFS, Hive, Pig, MapReduce
- **Data Visualization Tools:** Tableau, Power BI, Matplotlib, Seaborn, Plotly
- **Statistical Analysis:** Hypothesis testing, A/B testing, regression analysis, time series forecasting
- **Data Processing & ETL:** Pandas, NumPy, Dask, Apache NiFi, Alteryx
- **Cloud Platforms:** AWS (S3, EC2, EMR, SageMaker), GCP (Big Query, Dataflow), Azure (Data Lake, Machine Learning)
- **Databases:** MySQL, PostgreSQL, MongoDB, Oracle, Redis
- **Big Data Warehousing:** Amazon Redshift, Google Big Query, Snowflake, Azure Synapse
- **Natural Language Processing (NLP):** NLTK, SpaCy, BERT, Word2Vec, Genism
- **Deep Learning:** Convolutional Neural Networks (CNNs), Recurrent Neural Networks (RNNs), Long Short-Term Memory •
- **Version Control:** Git, GitHub, Bitbucket
- **Model Deployment & MLOps:** Docker, Kubernetes, Jenkins, Flask, Fast API, MLflow

PROFESSIONAL EXPERIENCE

Data Scientist
Capital One

McLean, Virginia , USA
Jun 2025 - Present

- Improved fraud risk prediction accuracy by **12%** by designing and deploying forecasting models and classification algorithms in **Python** and **SQL**, aligning outputs with compliance metrics and operational KPIs.
- Led revenue trend and behavioral analysis using **Snowflake** and **dbt**, uncovering early indicators of category growth and enabling sales teams to realign go-to-market strategies.
- Developed **Power BI** dashboards for fraud monitoring, campaign tracking, and customer segmentation, reducing decision turnaround time for business teams by **30%**.
- Collaborated cross-functionally with risk, product, and GTM teams to translate ambiguous strategic questions into structured analytics projects, delivering actionable insights for executive leadership.
- Built lightweight statistical models to support **quarterly planning**, **sales forecasting**, and **resource allocation**, integrating business context with iterative modeling cycles.
- Automated monthly business reviews and performance scorecards by building **Airflow-based reporting pipelines**, streamlining analytics delivery across fraud and credit functions.

Data Scientist
Cincinnati Financial Corporation

Fairfield, Ohio, USA
Aug 2024 – May 2025

- Enabled underwriting and product teams to drive retention-focused pricing strategies by developing policyholder lifetime models using **Python**, **SQL**, and historical lapse behavior, directly supporting regional risk planning.
- Reduced turnaround time for claims trend insights by 35% by building interactive dashboards in **Tableau** for the actuarial and risk teams, allowing faster exploration of seasonal patterns and geographic anomalies.
- Improved visibility into loss ratio volatility by performing root cause analyses using large-scale claims and policy data in **Spark** and visualizing the findings through executive-ready reports in **Power BI**.
- Increased segmentation precision in marketing efforts by applying unsupervised clustering techniques such as **K-Means** and behavior-based cohorting in **Python**, helping refine audience selection for retention and upsell campaigns.
- Streamlined delivery of recurring metrics by automating ETL workflows using **Airflow** and structured SQL pipelines, ensuring accurate and timely updates for KPI dashboards consumed by actuarial leads.
- Standardized performance metrics across underwriting and strategic planning by working with cross-functional stakeholders in IT and finance, implementing consistent data transformations using **dbt**.
- Supported monthly leadership reporting by merging data from policy, claims, and CRM systems and delivering clear, story-driven summaries tailored to business priorities using a combination of **SQL** and **visual storytelling**.

Data Scientist
Deloitte

Bangalore, India
Oct 2022 – Dec 2023

- Improved client marketing ROI by uncovering performance drivers through **SQL-based cohort analysis** and **descriptive analytics**, enabling GTM teams to optimize budget allocation across underperforming channels.
- Accelerated leadership decision-making for quarterly sales strategy by developing **forecasting models** using **Python** (ARIMA, linear regression) on multi-year revenue data, delivering scenario-based growth projections.
- Enhanced stakeholder visibility into customer and sales trends by building weekly-use **Tableau** and **Power BI dashboards**, integrated with client CRMs and used across cross-functional sales and planning meetings.
- Increased campaign conversion efficiency by conducting **A/B testing** and uplift modeling, translating open-ended client goals into measurable experimentation frameworks supported by statistical validation.
- Identified expansion opportunities within underserved customer cohorts by performing behavioral segmentation using **K-Means clustering** and **EDA** in **Python**, directly informing geographic and digital growth strategy.
- Eliminated hours of manual reporting effort across multiple projects by developing reusable **SQL pipelines** and scheduling report automation via **Airflow**, supporting both internal and client-facing analytics delivery.
- Strengthened analytics consulting value by translating ambiguous business prompts into data-backed deliverables, aligning final reports and models with stakeholder OKRs and strategic timelines.

Data Analyst
Dr.Reddy's Laboratories

Hyderabad, India
Jan 2021 – Sep 2022

- Improved API inventory accuracy and reduced stockout risk by forecasting material demand using **ARIMA** and **Prophet models** in **Python**, enabling the supply chain team to better align procurement cycles with production needs.
- Accelerated data preparation for clinical trial analysis by automating extraction and transformation workflows with **SQL** and **Pandas**, cutting turnaround time for analysts by over 40%.
- Enabled cross-functional R&D and manufacturing teams to track formulation batch progress by building interactive **Power BI dashboards**, visualizing trial metrics, batch deviations, and patient cohort trends.
- Informed formulation quality reviews by applying **K-Means clustering** and exploratory data analysis to production datasets, identifying underperforming batches and assisting QA teams in root cause identification.
- Transformed unstructured adverse event logs into structured insights using **NLP techniques** with **spaCy** and **NLTK**, helping compliance teams quickly surface critical issues for regulatory reporting.
- Improved strategic visibility for senior leadership by delivering integrated reports across QA, clinical, and operations data sources, aligning insights with GMP compliance standards and manufacturing KPIs.
- Increased analytics scalability across teams by documenting workflows and collaborating with IT to transition manual Excel processes into reusable Python scripts and modular **SQL queries**.
