

Rishmanth Dokku

Data Analyst

☎ 508- 293- 4586 | ✉ rishmanth.d@jobstechmail.com |  LinkedIn

SUMMARY

Data Analyst with 3+ years of experience transforming complex datasets into actionable business insights. Proficient in SQL, Python, and data visualization tools, with expertise in developing data collection processes, automating reporting solutions, and conducting advanced statistical analyses. Strong analytical and problem-solving skills in data mining, and root cause analysis. Adept at working in fast-paced, ambiguous environments while ensuring data integrity and accuracy. Experience in database management, ETL pipelines, and business intelligence reporting to drive cost savings and process optimization.

SKILLS

Methodologies: SDLC, Agile, Waterfall

Programming Languages: Python, SQL, R

Libraries: Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn

Database Management: MySQL, SQL Server, PostgreSQL

Data Visualization Tools: Tableau, Power BI, Excel

Analysis Techniques: Statistical Analysis, A/B Testing, Exploratory Data Analysis, Root Cause Analysis, Time Series Analysis

Big Data Tools and Technologies: Apache Hadoop, Spark, Apache Hive, Airflow, Kafka

Cloud Platforms: AWS (S3, Redshift, Glue), Azure, Snowflake

Version Control: Git, GitHub

Technical Skills: Data Cleaning, Data Mining, Data Analysis, Data Wrangling, Data Modeling, Data Warehousing, Data Governance

Soft Skills: Critical Thinking, Strong Communication, Problem Solving, Attention to detail, Analytical Skills, Team Collaboration

EDUCATION

Master of Science in Information Systems | Dakota State University, Madison, SD

May 2024

Bachelor of Technology | Prasad V. Potluri Siddhartha Institute of Technology, India

May 2021

WORK EXPERIENCE

Data Analyst | PNC Financial Services, Massachusetts

August 2023 - Current

- Automated financial reporting workflows using **Python**, **NumPy** and **SQL**, resolving inconsistent data across 12+ reports and reducing manual errors, saving 20 hours/month for finance teams.
- Diagnosed root causes of transactional data mismatches by implementing **SQL** validation scripts, improving data accuracy and cutting reconciliation time by 15 hours/month.
- Analyzed 50K customer profiles with **Python**, **Pandas**, **Scikit-learn** to identify adoption barriers, boosting product engagement through targeted marketing campaigns.
- Enhanced risk models using **Spark** and **time-series analysis** on 2M records, identifying critical risk factors and reducing false negatives, preventing \$1M in potential losses.
- Migrated legacy data to **Snowflake** on **AWS** and designed real-time **Tableau** dashboards for sales KPIs, uncovering \$50K cost-saving opportunities.
- Optimized **Snowflake** schema design and indexing for 10 critical tables, reducing query processing time by 40% and enabling faster insights for 50 users.
- Processed 5M financial records with **Hadoop** and **Spark** for **ARIMA forecasting**, improving long-term budget accuracy by 35% to guide strategic planning.

Data Analyst | Citus Infotech, India

January 2021 - August 2022

- Centralized EHR data from 10+ clinics into **Snowflake** using **SQL** and **Airflow**, reducing processing errors by 35% while ensuring HIPAA compliance for 100K+ patient records.
- Identified high-risk patient groups through predictive analysis using **Python**, and **logistic regression**, enabling targeted care plans that reduced 30-day readmissions and saved \$200K annually.
- Designed 8 **Power BI** dashboards with real-time **MySQL** integrations for ICU teams, reducing manual reporting time and improving bed turnover efficiency.
- Performed sentiment analysis on patient surveys using **Python** and **NLTK**, uncovering key service gaps that improved satisfaction scores via staff training and reduced wait times.
- Streamlined clinical data ingestion by collaborating with engineering teams to optimize **ETL** workflows, reducing lab result delays and improving ER decision-making.
- Collaborated with clinicians to design patient engagement metrics, increasing retention through personalized care plans for high-risk cohorts.
- Redesigned Snowflake schemas and materialized views for clinical reporting, reducing query execution time by 30% and improving cross-departmental data access.
