EDUCATION

Stevens Institute of Technology

Master of Science in Computer Science - 3.52/4.0

Sep. 2023 – May 2025

Hoboken, NJ

WORK EXPERIENCE

Okada & Company

Frontend Engineer

July 2025 – Aug. 2025

Manhattan, NY

- Architected enterprise-grade authentication system using React 19, TypeScript, Redux Toolkit, and React Router 7 with JWT token management, automatic refresh handling via Axios interceptors across 10+ API endpoints, and secure cookie-based persistence implementing master-only login flow
- Designed and implemented centralized Redux state management architecture migrating from local React state to establish single source of truth with memoized selectors handling authentication, email management, client data caching, and UI state across 20+ components
- Built reusable component library translating Figma designs into a comprehensive design system featuring DataTable with pagination, React Toastify notifications, composition-based page layouts, and custom Tailwind CSS styling system across 15+ application pages

GimmieAI

Full Stack Engineer

May 2025 – Present

Remote

- Built contact discovery system with privacy controls using React Native Contacts API and Supabase edge functions, implemented branch.io deep linking for invite tracking and conversions, designed weighted scoring analytics with PostgreSQL schema for tracking product interactions and recommendation algorithms
- Implemented OAuth2 Google Calendar sync for automated occasion reminders with real-time Supabase sync, developed centralized priority queue system preventing UI conflicts with feedback collection using idle detection and smart cooldowns
- Fixed critical email verification and UI bugs, optimized contact list with alphabetical navigation, integrated recommendation algorithms for personalized user experiences using React Native, PostgreSQL, Supabase, and Zustand

PROJECTS

LeaseConnect | TypeScript, React, Redux, GraphQL, MongoDB

[link](#)

- Built a full-stack subleasing platform. Implemented JWT authentication with refresh token rotation and secure user authorization
- Designed and implemented multi-step onboarding and listing workflows using React Hook Form, Redux Toolkit, and Zod schema validation, integrating Google Places API for address autocomplete and geolocation accuracy
- Integrated Cloudinary for CDN-based image storage and developed a responsive, accessible UI with Tailwind CSS and Radix UI, ensuring mobile-first performance and full WCAG 2.1 accessibility compliance
- Developed dynamic search and filtering functionality with GraphQL query composition and indexed MongoDB operations, enabling fast, paginated results by location, price, date availability, and amenities

NutriTrack | React, Redux, OpenAI, Node.js, Jest, CI/CD

[link](#)

- Built a nutrition tracking SaaS platform with React 18, Node.js/Express, and MongoDB. Integrated OpenAI GPT-4 Vision API for real-time meal analysis. Followed Agile/Scrum methodology
- Implemented security features including JWT authentication, bcrypt password hashing, CORS configuration, and HTTP-only cookies. Maintained 100% uptime with error boundaries and graceful degradation
- Deployed automated testing infrastructure with Jest, Supertest, and React Testing Library through GitHub Actions CI/CD pipeline, ensuring code quality with pull request workflows and branch protection rules within Agile development framework

ACHIEVEMENTS

2nd in Folio Hackathon for MarketAutomator | Next.js, Supabase, Vercel-AI SDK, API Integrations

[link](#) | [videolink](#)

- Engineered a multi-agent AI platform leveraging LLMs to automate end-to-end marketing campaign creation, integrating Canva design analysis, content generation, and multi-channel distribution (Mailchimp, GitHub Pages, Notion) via a unified dashboard
- Designed and implemented a scalable, modular architecture with specialized agents (Orchestrator, Brand, Content, Technical, Refinement) for visual context extraction, brand consistency, and natural language-driven campaign refinement, using Next.js 14, TypeScript, and Supabase for secure authentication and real-time streaming
- Reduced campaign deployment time by 90% for small businesses by developing visual-first AI workflows, OAuth integrations for 5+ platforms, and robust error handling, democratizing access to professional marketing automation without technical expertise

TECHNICAL SKILLS

JavaScript, TypeScript, Python, C++, Java, CSS3, HTML5, SQL, NoSQL, TailwindCSS, React, React Native, Next.js, Material-UI (MUI), Redux Toolkit, ShadCN, Tanstack Query, Node.js, Express.js, FastAPI, LangChain, RESTful APIs, GraphQL, MongoDB, PostgreSQL, Supabase, LangChain, AI Agents, Claude Code, OpenAI API, HuggingFace, ReactHookForm, Zod, SocketIO, Authentication: Firebase Auth, JWT, OAuth 2.0, Supabase Auth, VSCode, ClaudeCode, PyCharm, Postman, Slack, JIRA, Figma, Jest, React Testing Library, CI/CD, Git
