

TECHNICAL SKILLS

- **Programming Language:** Python
- **Database:** MySQL
- **Tools:** Linux, MS Excel, Power BI, Azure, Docker, Kubernetes

WORK EXPERIENCE

Data Analyst Intern

Wydescape Consulting Pvt. Ltd., Rajkot, Gujarat

April 12, 2023 - September 30, 2023

- Proficient in data collection, cleansing, and analysis from various sources.
- Developed interactive dashboards and visualizations using Tableau, enhancing data comprehension for technical and non-technical stakeholders; reduced report creation time by 40% and improved decision-making efficiency by 25%
- Engineered comprehensive data analysis models with sophisticated statistical techniques, identifying key trends that informed executive strategies, resulting in a 20% boost in market share and revenue increase.

EDUCATION

Bachelors of Technology in Computer Science

Aug`2020 - Aug`2024

Lovely Professional University

Phagwara, India

CGPA: 7.63

Intermediate

Aug`2018 - Aug`2020

Evergreen Public School

New Delhi, India

Percentage: 63%

PROJECTS

Integration of Power BI and SQL

- Implemented Revenue Analysis using SQL and Power BI, performed ETL processes and applied conditional formatting to reveal stable revenue, with monthly revenue at 69.79K and annual revenue at 817.86K, aiding in forecasting and planning.
- Utilized Power BI and DAX functions to generate new columns, uncovering that Fridays have the highest orders at 3.5K and July peaks at 1,935 orders, indicating significant sales surges.
- Identified Category Performance to show classic pizza as the highest-selling category, contributing 26.91% of total revenue.
- Applied data engineering insights and used the Data Visualization tool to determine that large-sized pizzas account for 45.89% of sales, highlighting consumer preference.
- Generated top 5 best performing and worst performing pizza from the data set, which can help companies to analyze their products and reduce the losses by 20-25%.

End-to-End Data Pipeline and Analysis Using Azure Services

- Implemented Azure's secure storage solutions to handle large-scale data, improving data access efficiency by 35% and reducing storage costs by 20% through optimized resource allocation.
- Implemented Azure Data Factory to build and orchestrate data pipelines, enabling seamless data loading into storage accounts, which improved data processing efficiency by 40% and reduced manual intervention by 60%.
- Leveraged Azure Databricks within a dedicated workspace to perform in-depth data analysis using Spark SQL, enhancing scalability and advanced analytics capabilities, resulting in a 50% increase in data processing speed.
- Strengthened security protocols by implementing Azure Active Directory app registration, resulting in a 40% reduction in unauthorized access incidents and enhancing overall system security.
- Centralized all Azure services within a resource group for streamlined management and organization efficiency.

CERTIFICATIONS

- **Applied Data Science with Python** | Simplilearn -July 2022
- **Tableau Specialization** | Coursera -Mar 2023
- **R Programming** | Coursera -Mar 2023
