 Centreville, VA 20121

SUMMARY

- Over 3+ years of professional experience in the analysis, design, development, implementation, and maintenance of enterprise software applications using Java, Kotlin, J2EE, and Spring-based frameworks, with full involvement across all phases of the Software Development Life Cycle (SDLC) including requirements analysis, system design, development, testing, and deployment.
- Hands-on experience implementing modern software development methodologies, including Test-Driven Development (TDD) and Pair Programming, while working in Agile SCRUM, Kanban, and Waterfall project environments.
- Strong expertise in Model-View-Controller (MVC) frameworks such as Struts 1.x, Spring 2.x, Spring Boot, and Spring Web Flux, with experience building scalable, reactive, and non-blocking web applications.
- Extensive proficiency in web application development technologies including Servlets, JSP, JSTL, HTML, CSS, JavaScript, jQuery, AJAX, as well as XML and XSL/XSLT for data representation and transformation.
- Solid experience in middle-tier application development, utilizing Servlets, JSP, and Enterprise JavaBeans (EJB) to implement business logic for enterprise-scale systems.
- Designed, developed, and consumed SOAP and RESTful Web Services, adhering to SOA standards such as WSDL, XSD, and SOAP protocols, and implemented XML processing using DOM4J, JAXB, JAXP, and XML Beans.
- Designed application architectures using UML modeling techniques with tools such as Rational Rose, and implemented industry-standard design patterns including MVC, Singleton, Facade, Factory, DAO, and DTO to ensure maintainability and scalability.
- Demonstrated experience in developing distributed systems and enterprise applications using Java, Kotlin, Spring Framework, Spring Boot, Hibernate, and the Java Collections Framework.
- Developed, deployed, and supported applications in UNIX/Linux environments, leveraging Shell Scripting to automate application deployments, maintenance tasks, and operational workflows.
- Produced and maintained functional, technical, and business documentation to support development activities and ensure alignment with organizational and project objectives.
- Deployed and managed applications across enterprise application servers including IBM WebSphere, Oracle WebLogic, JBoss, Apache Tomcat, and WebSphere ESB in multi-environment setups.
- Utilized industry-standard IDEs such as Eclipse, NetBeans, Rational Application Developer (RAD), and WebSphere Integration Designer (WID) to support efficient software development and debugging.
- Implemented source code version control and collaboration workflows using GIT, SVN, and CVS, following branching and release management strategies.
- Applied build automation and dependency management using Maven, Gradle, and Apache Ant, and integrated Log4J for centralized application logging, monitoring, and troubleshooting.
- Worked extensively with enterprise messaging systems including Java Messaging Service (JMS) and IBM MQ Series to support asynchronous, event-driven application architectures.
- Applied advanced relational database concepts using Oracle (9i/10g/11g), DB2, and MySQL, developing complex PL/SQL procedures, functions, triggers, and performance-tuned SQL queries.
- Collaborated with Release Management and DevOps teams to coordinate build promotions and deployments across Development, QA, SIT, UAT, and Production environments.
- Demonstrated strong analytical, problem-solving, and communication skills, effectively collaborating with cross-functional teams, stakeholders, and technical leads while also working independently in fast-paced, deadline-driven environments.

TECHNICAL SKILLS

Languages: Java, Kotlin, SQL, Python, PL/SQL, UML, C/C++, JavaScript, React

Web Technologies: Spring Boot, Spring Web flux, Spring MVC, JSP, Servlets, JNDI, JDBC, JSTL, JMS, JPA, EJB, Web Services, SOAP, WSDL, JAX-RS, JSX-WS, HTML, DHTML, Java Beans, JavaScript, AJAX.

XML Technologies: XML, XSL, XSLT, SAX, DOM, AXIS, Castor, XML Beans and JAXB Web/App.

Servers: Apache Tomcat 4.0/5.0/6.0, Web Logic 8.1/9.1, Web sphere9.0, 8.5, 8.0, JBoss.

IDEs: Eclipse, IntelliJ, Red Hat Developer Studio, WSAD, IBM RAD

Tools: TOAD, XmlSpy, Ant, PL/SQL Developer, JUnit, iReport

Operating systems: Windows, UNIX, Linux, MacOS

Databases: Db2, Oracle 8 / 9i / 10g, HSQL, My SQL, MS SQL Server 7.0, Firebase

Design Patterns: MVC, Singleton, Business Delegate, Service Locator, Session Facade, DTO, DAO, Factory Pattern ETC

Frameworks: Struts, Spring Dependency Injection, Spring MVC, Spring Core, Spring Context, Spring AOP, Spring DAO, Spring IOC, Spring JDBC, spring with Hibernate, Hibernate, DWR, Log4j.

Version Control: CM Synergy, Rational Clear Case, CVS, VSS, SVN, GIT, TFS

EDUCATION

Bachelor of Science in Computer Science, Virginia Tech, Blacksburg, VA

WORK EXPERIENCE

Java Software Developer

June 2024 - Present

Epic - Remote

- Designed and developed RESTful APIs using the Spring Framework, including Spring Boot and Spring MVC, leveraging transaction management, dependency injection, and MVC architecture.
- Collaborated with business stakeholders and product owners to gather business requirements and convert them into functional and technical specifications.
- Followed SDLC best practices while working in Agile and Waterfall development models for enterprise-scale applications.
- Developed dynamic and interactive UI components using JSP, Servlets, JSTL, AJAX, jQuery, and JavaScript.
- Implemented Struts 2 MVC architecture, configuring Action classes to manage client requests and application flow.
- Designed and integrated REST and SOAP web services to support system integration and data exchange with external applications.
- Implemented business logic using Enterprise JavaBeans (EJB) including Stateless Session Beans, Entity Beans, and Message-Driven Beans (MDBs) to support JMS queues and topics.
- Designed and implemented DAO layers using Hibernate ORM for efficient database interaction with Oracle and DB2 databases.

- Created and optimized PL/SQL stored procedures, triggers, and SQL queries to improve database performance and data integrity.
- Applied enterprise design patterns including MVC, DAO, DTO, Session Facade, Service Locator, Business Delegate, and Intercepting Filter to build scalable and maintainable applications.
- Developed and executed unit test cases using JUnit and Mockito to ensure code quality, performance, and reliability.
- Deployed enterprise applications on IBM WebSphere and Oracle WebLogic Application Servers, supporting production stability and scalability.
- Used Maven for build automation, dependency management, and application packaging.
- Maintained source code repositories using TFS and ClearCase, and implemented centralized logging using Log4J.
- Participated in daily stand-ups and status meetings, and collaborated closely with QA and UAT teams to validate functionality prior to production releases.
- Worked with server and infrastructure teams to support application deployment, configuration, and environment setup across staging and production environments.

Environment: Java 1.17, Spring Boot, Spring Web flux, Kotlin, Python, J2EE, REST, SOAP, Spring 3.0, Ajax, JQuery, React, Java script, Angular, JSP, XSD, XML Bean, WebSphere 6.0, DB2, JUnit, Log4J, Spring Framework security using LDAP, TFS, Mockito

Java Developer

May 2023 - May 2024

Capital One - Tyson's Corner, VA

- Used Spring Framework and Spring Boot for dependency injection, auto-wiring, and DAO/Bean management to build modular, scalable applications.
- Implemented business logic using standard design patterns with Java and Kotlin, ensuring clean, maintainable, and reusable code.
- Configured Bamboo CI/CD pipelines to automate builds, testing, and artifact publishing to Gradle repositories.
- Developed Controller Servlets to handle HTTP requests from JSP pages in Spring MVC-based web applications.
- Built UI components using JSP, HTML, Servlets (Front Controller pattern), and JavaScript for client-side validation and user interaction.
- Participated in requirements gathering, analysis, and design discussions, contributing to functional and technical specifications.
- Performed analysis, design, development, and testing using Agile SCRUM methodology, with exposure to Waterfall development models.
- Developed SOAP Web Services using JAX-WS and implemented service consumers using Apache CXF following SOA standards.
- Developed web-based applications using Spring MVC architecture, including modules built with Spring Boot and Spring Web Flux for reactive programming.
- Implemented Hibernate ORM integrated with Spring Boot for transaction management and data persistence.
- Created Hibernate configuration files, mapping files, and entity classes for Oracle and DB2 databases.
- Used Dozer Bean Mapper for DTO and domain object mapping across application layers.
- Wrote SQL queries in Java and Kotlin to perform CRUD operations for real-time data processing.

- Used Stored Procedures through Spring JDBC to improve database performance and reusability.
- Modified and maintained XML Schema Definitions (XSDs) based on evolving business requirements.
- Worked extensively with XML technologies including XSL/XSLT, DOM4J, XPath, and XML Beans.
- Performed XML to XSLT transformations using Altova MapForce for UI and data presentation.
- Applied XPath queries to extract and validate data from complex XML documents.
- Used JAXB for XML marshalling and unmarshalling in web service communication.
- Developed JSP-based XML schema viewer applications to display structured XML content in browsers.
- Managed source code using GIT, improving collaboration and version control workflows.
- Automated build, test, publish, and deployment processes using Gradle with dependencies hosted in Nexus Repository.
- Configured and maintained WebSphere JNDI resources for external service integration.
- Implemented XA transactions to ensure ACID compliance across multiple data sources.
- Developed multithreaded components using Java Concurrency utilities, executing background tasks with Executor and Future frameworks.
- Used UNIX/Linux commands to analyze logs, monitor processes, and support production systems.
- Contributed to all phases of SDLC, including development, deployment, and production support.
- Implemented logging and exception handling using Log4J for debugging and monitoring.
- Developed unit test cases using JUnit and validated SOAP services using SoapUI.
- Wrote Shell scripts to automate file transfers and nightly batch processing jobs.
- Deployed enterprise applications on IBM WebSphere Application Server and deployed Spring Boot microservices to cloud-hosted environments.

Environment: Java 1.17, Python, Spring Boot, Spring MVC, Java Beans, J2EE, SOAP, Spring 3.0, CXF, Hibernate 3.0, Ajax, JQuery, JSP, XSD, XML Bean, WebSphere 8.5, Eclipse Juno, DB2, JUnit, Log4J, Unix, GIT 1.9.3, Gradle 1.11, Altova mapForce 2014, Soap-UI 4.6.4, MobaXTerm, LogExpert, FileZilla, Spring Framework security using LDAP, Oracle ADF Business components

Junior Java Developer

May 2022 – May 2023

State Farm – Bloomington, Illinois

- Analyzed and designed application modules using J2EE architecture, with implementation in Java and Kotlin for enterprise applications.
- Applied Information System Development Methodology (ISDM) for system analysis, design, and development of enterprise-grade software solutions.
- Developed Hibernate annotation-based entity classes in Java, mapped to Oracle database tables for persistent data management.
- Implemented Session Facade design pattern and Java Messaging Service (JMS) APIs to enable asynchronous messaging across distributed services.
- Developed SOAP-based web services, defined WSDL contracts, and built client applications using JAXB, XML, and SOA principles.
- Contributed to high-level system architecture design and created logical architecture views using standard enterprise documentation practices.
- Designed object-oriented solutions using UML, creating Use Case, Class, and Sequence Diagrams for effective application modeling.
- Implemented multithreading in Java to improve concurrency, performance, and prevent deadlocks under high-load conditions.

- Developed core Java interfaces and abstract classes to support reusable, extensible, and modular application components.
- Built Spring Core and Spring MVC components to integrate DAO layers with business logic, and later refactored monolithic modules into Spring Boot microservices.
- Developed PL/SQL procedures for complex database operations using Oracle and Hypersonic SQL (HSQL) databases.
- Configured data sources and deployed enterprise applications on IBM WebSphere Application Server, ensuring production readiness.
- Implemented Java Server Faces (JSF) in the presentation layer along with JSTL, AJAX, and Google Web Toolkit (GWT) to build interactive user interfaces.
- Developed responsive UI components using HTML, DHTML, CSS, JavaScript, and JSON.
- Created Controller Servlets to handle HTTP requests from JSP pages, enabling server-side business processing.
- Implemented client-side form validations using JavaScript, and developed JavaBeans to manage Data Transfer Objects (DTOs).
- Implemented Enterprise JavaBeans (EJB) including Session Beans, Entity Beans, and Message-Driven Beans (MDBs) for scalable business logic.
- Developed client-side interfaces using JSP and Servlets, aligned with Spring MVC architecture.
- Used GIT and SVN for source code version control, supporting collaborative development and release management.
- Queried enterprise data using EJB QL with Hypersonic SQL, optimizing entity-based data access.
- Developed and consumed SOAP web services using Java, integrating internal systems through SOA standards.
- Created and maintained Apache Ant build scripts for automated builds across test and production environments.
- Integrated Spring Web Flux into modernized modules to enable reactive programming and improve non-blocking system performance.

Environment: EJB2.0, Struts, Hibernate, JSP, JSF, Servlets, Web services, XML, XSLT, XSL, JavaScript, Ant, JBoss, HSQL, Net Beans, Oracle 9i, SQL, PL/SQL, Windows 2000/ XP, Enterprise Architect.
