Education

The University of Illinois at Chicago

Aug. 2019 - May 2023

College of Engineering - BS in Computer Science

UIC Chancellor's Fellow Award Winner, GPA: 3.76

Work Experience

Redmane Technology | Software Developer | Chicago, IL

June 2023 - August 2025

- Implemented CCWIS solutions for state government contracts by configuring an in-house human services platform, writing and maintaining custom C# solutions to execute complex business logic per client requirements, optimizing system execution times by up to 90%.
- Majorly contributed to a testing framework for in-house software, expanding and implementing a Playwright framework for modules of the software and writing 150+ unit tests for quality assurance of input fields and server communication.
- Took ownership of large modules in CCWIS solutions such as user maintenance, and handled all future incoming bug reports and change requests regarding said modules.
- Wrote a custom C# solution utilized to handle large scale batch processes of conversion data, and utilized SQL to query, filter, and modify data.
- Collaborated with business analysts to identify system limitations, adjust implementations, and fulfill client change requests in a timely manner.
- Utilized Azure DevOps to track and estimate ticketed work, maintain repositories, and execute pipelines.
- Created a client demo for user processing via Angular and a Java backend, utilizing GitHub Copilot.

Projects

One More Cup of Ego | Unity and C#

September 2022 - October 2022

- Collaboration project with a partner to create an interactive VR experience via C# scripts and 3-D colliders and modeling, inspired by the games of *Project Moon*.
- Modeled and textured 3-D environments for users to explore via models created and animated in either VRoid Studio, Blender, and Mixamo.

Health Chatbot | Python

September 2021 - November 2021

- Trained multiple machine learning models to identify weighted key phrases in user responses using Sci-Kit and Numpy libraries, iteratively improving the ability to interpret user input of symptoms over the course of the semester.
- Parsed strings with complex regular expressions to filter and classify user input.

Keno | Java

September 2020 - October 2021

- Coded the functionality of the casino game *Keno* in collaboration with a partner.
- Represented a Keno board with a GUI made in JavaFX, alongside necessary UI elements to handle gameplay elements such as player ticket selections and rewards.

Skills

Technical: C#, .NET, Playwright, SQL, Python, Java/JavaFX, C/C++, Ruby, Typescript, Javascript

Dev Tools: Git/Github, VS/VSCode, Azure Devops, SSMS, PyCharm, IntelliJ, MySQL, Unity, Blender, RubyMine

Experienced with hybrid, in-person, remote work and Agile Scrum teams.

Relevant Coursework: Software Design, Systems Programming, UI Design and Programming, Introduction to Networking, Natural Language Processing, Artificial Intelligence, Virtual/Augmented and Mixed Reality, Data Structures

Non-Technical: Seal of Bilingualism in Bulgarian, 10+ years of Computer Assembly/Maintenance, primarily for personal desktops.
