SUMMARY

Software Developer (MS CS, UTA '26) with industry experience modernizing .NET Core + React apps and building Spring Boot microservices. Delivered 6+ secure REST APIs, improved API latency by 35%, and shipped production features used by 100+ internal admins. Strengths in Java, C#, Spring Boot, .NET, React, SQL/EF Core, Azure, testing, and clean architecture; passionate about high-quality code, measurable impact, and shipping reliably.

EDUCATION

The University Of Texas At Arlington

Master's of Science in Computer Science

Aug 2024 – Expected graduation: May 2026

Arlington, TX

SKILLS

Languages: Java, C#, Python, JavaScript/TypeScript, SQL

Backend: Spring Boot, .NET Core, REST APIs, Hibernate/JPA, EF Core, LINQ.

Frontend: React

Databases: MySQL, SQL Server, MongoDB, Redis, T-SQL, Stored Procedures.

Testing and QA: Unit Testing, Cypress (UI), Jest/xUnit (if used).

Cloud and Devops: Azure, Git, CI/CD, Postman, SonarQube, Docker (add if you've used).

EXPERIENCE

ISN — *Software Developer Intern*

June 2025 – August 2025

- Modernized a legacy Web Forms admin module into a clean .NET Core + React experience, removing viewstate/server-side rendering bottlenecks and improving initial load by 40%.
- Delivered 3 PBIs to migrate native AG Grid screens to the OdysseyTable component across multiple pages, unifying sorting/pagination/export and reducing ongoing UI maintenance by 40%.
- Built and integrated 6+ REST APIs (search, add/edit, uniqueness check, task-list check, providers, types) with unit tests and secure coding practices; shipped to production for 100+ internal admins.
- Optimized LINQ/EF Core (projection, no-tracking, tuned includes) to cut average API response time by 35% and database round-trips by 30%.
- Improved code quality via SonarQube: resolved 120+ code smells and 25 security hotspots; achieved 85% unit-test coverage on new/modified services to pass quality gates consistently.
- Strengthened validation to block duplicates/invalid entries, reducing manual data correction by 25%.

Brane Enterprises PVT LTD — *Software Development and Testing Intern*

September 2023 – July 2024

- Built 50+ Flutter UI screens and integrated 40+ Java/Spring Boot REST APIs, ensuring seamless front-back communication for complex workflows.
- Owned QA for 15+ products (functional, regression, performance); expanded Cypress automation to cut manual testing by 30% and reduced bug rate by 25%.
- Contributed across the SDLC to a data-management platform handling 100,000+ entities; supported Windows/web deployments and applied SOLID/design-pattern practices for maintainability.

PROJECTS

Microservices Architecture for Ride Sharing Application | *Spring Boot Microservices*

2024

- Developed a ride-sharing application using ReactJS for the front-end and Spring Boot microservices for the back-end.
- Services: Location, Entity, Booking, Socket, Review, Eureka, Auth.
- Features: Kafka for async communication, Retrofit for API calls, DB migrations with Flyway.
- Technologies: Spring Boot, Spring Data JPA, Spring Security, Redis, MySQL, Kafka.

Skin Cancer Detection Using Deep Learning | *Deep Learning*

2023

- Developed a CNN model using Python, TensorFlow, and Keras to detect skin cancer, achieving 92% accuracy on a dataset of over 10,000 images by employing image augmentation and normalization techniques.
- Integrated the model into a Spring-based web application for real-time image classification, reducing the misclassification rate by 15% through model tuning and optimization.

Certifications and Courses

Microsoft Certified: Azure Fundamentals (AZ-900): Completed 2025

Java, Spring Boot, LLD, HLD by Concept and Coding: Core Java basics, Spring Boot, LLD, HLD
