

SUMMARY

Experienced Software Developer with 4+ years of expertise in full-stack development, cloud migration, and application modernization. Proficient in Java, C++, C#, and Python, with extensive experience in AWS, microservices, and RESTful APIs. Adept at designing and optimizing scalable systems, enhancing database performance, and delivering customer-focused solutions. Skilled in front-end technologies such as React.js and Angular, with a strong focus on building high-performance, maintainable applications in Agile environments. Passionate about leveraging cloud technologies to drive business transformation and improve operational efficiency.

SKILLS

Programming Languages: Java, C++, C#, Python, JavaScript, C, SQL, Node.js
Frameworks & Tools: Spring Boot, Spring Framework, React.js, AngularJS, Angular 2+, ASP.NET MVC/Core, Docker, Kubernetes
Cloud Services & DevOps: AWS (EC2, S3, Lambda, DynamoDB, CloudFormation, CloudWatch, RDS), Terraform, CI/CD
Databases: PostgreSQL, MySQL, SQL Server
Other: RESTful APIs, Microservices, HTML5, CSS3, jQuery, Git

EDUCATION

Master of Science in Computer Science, UCMO , Warrensburg, MO.	May 2021 - June 2022
Bachelor of Technology in Computer Science & Engineering, MRCE , Hyderabad, India. (Affiliated to JNTUH)	June 2016 - December 2020

EXPERIENCE

United Airlines – Software Developer II (Contract) / Chicago, IL

June 2023 – November 2024

- Contributed to the migration of a legacy revenue management system to AWS, transforming C-based jobs to C++ with binary input files, improving system scalability by 40% and reducing operational overhead by 20%.
- Optimized workflows using multi-threading and modern C++ features, designing and implementing efficient C++ code for processing binary files, reducing job execution time by 30% and runtime by 35%, while improving overall system efficiency.
- Migrated job scheduling from IBM Orchestrate to AWS-native solutions, increasing system reliability by 25%.
- Validated post-migration system performance, ensuring 99% data integrity and documenting strategies for scalable solutions.
- Leveraged AWS services (S3, Lambda, EC2) to host and execute the migrated processes, enhancing system performance and resource utilization.
- Documented migration strategies, workflows, and code changes, ensuring seamless ongoing maintenance and scalability.
- Identified system bottlenecks and implemented performance improvements during the migration, gaining practical experience in modernizing legacy systems and transitioning to scalable, cloud-based solutions.
- Collaborated with cross-functional teams to resolve technical challenges and meet project deadlines.

Amazon – Software Development Engineer / Seattle, WA

August 2022 – April 2023

- Developed and automated key workflows for claim management, refunds, and orders within the A-to-Z Guarantee team.
- Developed the Enhanced Customer Communication (ECC) system using Drools rule engine, dynamically displaying order status messages, leading to a 55% improvement in Customer Positive Response Rate (CPRR).
- Developed and implemented the Claim Status Tracker (CST) and an image upload feature on the orders claim page using Java, JavaScript, and JSP, allowing customers to track claim status and submit supporting images, leading to a 60% improvement in Customer Positive Response Rate (CPRR).
- Automated and optimized claim management workflows, reducing manual intervention by 40% and enhancing system efficiency.
- Migrated datasets from a relational database to MongoDB, designing efficient ETL pipelines to ensure 99.8% data accuracy and 35% faster query execution, enhancing system scalability for claim management workflows.
- Refactored unstructured JavaScript code for the order claims page, reducing debugging time by 30% and improving code maintainability and testability, leading to 20% faster script execution and smoother UI performance.
- Designed and maintained AWS cloud infrastructure using CloudFormation and Terraform, optimizing deployment, scalability, and real-time monitoring with CloudWatch, CloudTrail, and AWS Config.
- Built and optimized microservices-based applications using Java 8, Spring Boot, Hibernate, and Web Services, integrating with Kubernetes, Swagger, and Docker for scalability and deployment.

BYJU’S – Software Engineer / Hyderabad, India

May 2020 – April 2021

- Collaborated in the development of a role-based access control (RBAC) service, managing user permissions based on roles and team memberships, improving security and scalability across 10+ internal applications and ensuring only authorized access to sensitive data.
- Integrated the RBAC service with over 10 applications, improving access control policies, reducing unauthorized access incidents by 30%, and streamlining permissions management across the organization.
- Optimized database queries for the RBAC system, achieving a 20% improvement in data retrieval times across SQL Server, MySQL, and PostgreSQL, improving system performance and access efficiency.
- Automated user role assignments, reducing manual intervention by 40%, which led to faster onboarding and streamlined workflows for users and administrators.
- Implemented robust security features, including audit logs and permission tracking, enhancing accountability and ensuring compliance with internal policies, reducing access-related errors by 25%.
