SUMMARY

Software Development Engineer with 4+ years of industry expertise in developing WebServices and designing product features using Java/J2EE and Amazon Web Services (AWS). Strong exposure in leveraging AWS services such as Elastic Container Service (ECS), Amazon S3, and AWS Lambda. Collaborative mindset with a focus on delivering efficient software solutions.

EXPERIENCES

Amazon.com Services LLC, Seattle

Software Development Engineer

Sept 2022 – May 2024

- Developed a service using Java, ECS Fargate Service and DynamoDB to enable BuyWithPrime page functionality for customers with a reduced latency of 15ms.
- Experimented on usage of computing platforms such as Fargate, ECS and Lambda during the design, to limit the Maintenance, CPU, Memory and Scaling efforts and DynamoDB to store the data.
- Enhanced system reliability and performance by implementing chaos engineering principles using Gremlin and Spring Cloud Circuit Breaker.
- Developed a high-performance and low latency service using Spring boot and AWS Fargate, resulting in 15ms reduction in response time.
- Composed fine tuning of services through throttling mechanisms using Java to manage the peak traffic load of 5000 TPS while maintaining 98% availability rate, which resulted in decreased operational costs.
- Developed custom Java libraries and utilities to enhance code reusability and efficiency.
- Revamped existing architecture to support displaying of non-prime orders purchased as a part of Mixed-cart design.

Infosys Limited, Mangalore

Senior Systems Engineer

Nov 2020 – Jun 2021

- Designed AllState Remittance applications using the Spring Framework, leveraging robust capabilities for efficient software development.
- Constructed robust, scalable RESTful APIs using Spring Boot to expose critical quote proposal data, enabling efficient data consumption by downstream systems.
- Implemented a comprehensive Spring Security framework to safeguard sensitive quote proposal information, enforcing granular access controls and mitigating security risks.
- Architected and led the design of the eProposal service, employing a robust microservices or monolithic architecture aligned with project objectives and scalability requirements.
- Improved diverse functionalities of payments into a unified service, bolstering operational efficiency and client convenience. Implemented secure SOAP calls, ensuring data integrity and privacy.
- Implemented an ideal communication protocol using annotation based communication for payment related functions, reducing server response times and increasing application performance by 25%.
- Developed and maintained automated CI/CD pipelines for Java applications targeting Tomcat and WebLogic servers using Jenkins and Maven reducing deployment time by 30%.

Systems Engineer

Sept 2018 – Oct 2020

- Crafted a Spring Boot wrapper service, for returning customer details, which helped in extracting data from different relational databases to create a list of applicable quotes for customers.

- Architected and developed high-performance RESTful APIs to support complex business operations, significantly improving data accessibility and system integration.
- Engineered Spring Boot based wrapper services, for customer retrieval and billing with SOAP calls to retrieve data from ICS and Billing Service, reduced data retrieval time by 40%.
- Designed and implemented scalable microservices architecture using Spring Boot, applying Object-Oriented Programming (OOP) principles to ensure modularity, reusability, and maintainability of code across services.
- Implemented complex UI components and interactions using Angular Material or other UI frameworks, ensuring a seamless user experience.
- Authored and deployed EJB components using the WebSphere Application Server, enhancing the scalability and efficiency of applications.
- Devised comprehensive Postman test cases to validate different application testing scenarios, ensuring robust and error-free performance.

EDUCATION

- **University at Buffalo, Buffalo, NY** | *Aug 2021 – Jul 2022*
Master of Engineering Science (Data Science)
- **GITAM University, Hyderabad, Telangana** | *Jun 2014 – May 2018*
Bachelor of Technology in Electronics and Communication Engineering

TECHNICAL SKILLS

Programming Languages: Java, Python, R language, TypeScript, C, C++, MySQL, Linux

Operating Systems: Windows, IOS

Tools: Eclipse, IntelliJ IDEA, SOAP UI, RStudio, Tableau, PostMan

Web Technologies: Angular, CSS, HTML, JSON

J2EE Technologies: SERVLETS, JSP, EJB, HIBERNATE, SPRING, LOG4J, JUNIT, JAXB, JDBC.

CERTIFICATIONS

- **AWS Certified Developer – Associate** | *May 2024*
Amazon Web Services Training and Certification
- **AWS Certified Data Engineer – Associate** | *July 2024*
Amazon Web Services Training and Certification

TRAININGS

- Diploma in DataScience and trained in Hadoop, R Language, Python, Spark and Machine Learning.
- Trained in RESTful Web Services, Java, Python and SQL at Infosys Limited, Mysore.

PERSONAL PROJECTS

Analysis of Google Play Store Apps Data:

- Created a App Rating prediction prediction model which determines trends and ratings on the applications in Play Store by using Python, Linear Regression and Poisson Distributions with an 0.47 Root Mean Squared Value.

Credit Card Transaction Fraudulent Detection:

- Devised a credit card fraud detection model using machine learning on historical transaction data. Trained and validated with Random Forest with accuracy of 98.6%.
