SUMMARY:

5 years of experience designing, building, and deploying scalable enterprise software solutions in **Banking, FinTech, ERP, and EdTech** domains.

Strong expertise in **Java (J2EE, Spring Boot, Spring Cloud, Hibernate, JPA)** and building **microservices-based architectures**.

Proficient in **frontend development** using **React.js, Redux, TypeScript, Material UI**, with focus on performance optimization and responsive design.

Skilled in building **REST APIs, batch jobs, and distributed systems** with strong focus on **performance, resiliency, and scalability**.

Hands-on with **Databases (MySQL, PostgreSQL, MongoDB, MS SQL, Redis)** including query optimization, stored procedures, and caching.

Cloud-native development using **AWS (EC2, S3, EKS, CloudWatch, Route53), Azure, Docker, Kubernetes**, ensuring seamless deployments. Strong exposure to **CI/CD (Jenkins pipelines, GitHub, Bitbucket), Monitoring & Logging (ELK Stack, Grafana)**, and **Agile/Scrum** practices.

EDUCATION:

Master of Science, Computer Science

Aug 2022 - Dec 2023

University at Buffalo, SUNY, Buffalo, NY, USA.

TECHNICAL SKILLS:

Languages & Frameworks: Java (J2EE, Spring Boot, Spring Cloud, Hibernate, JPA), JavaScript (ES6+), TypeScript, Node.js, Express.js, React.js, Redux, HTML5, CSS3

Databases: MySQL, PostgreSQL, MongoDB, MS SQL Server, Redis

Cloud & Deployment: AWS (EC2, S3, EKS, Route53, CloudWatch), Azure, Docker, Kubernetes, Vercel

Tools & Platforms: Git, GitHub, Bitbucket, Jenkins, Jira, Postman, Swagger, ELK Stack (Elasticsearch, Logstash, Kibana), Grafana

Testing & CI/CD: JUnit, Mockito, React Testing Library, Jenkins pipelines, Agile/Scrum practices

Methodologies: Object-Oriented Design, Microservices Architecture, RESTful Services, CI/CD Pipelines

PROFESSIONAL EXPERIENCE:

Software Engineer, Barclays Bank, USA

Feb 2024 – Present

- Spearheaded the **development** of a specialized **performance optimization application**, enabling **enterprises** to analyze **computing resource utilization** and **cost metrics** for informed decision-making.
- Designed and implemented advanced **Java solutions** using **OOPs, Collections, and Multithreading** to enhance application responsiveness and throughput.
- Leveraged **Java 8 features** such as **Lambda expressions** and **Parallel Streams** to optimize investment-related functionalities and improve system performance.
- Built and integrated **RESTful APIs** and **microservices** with **Spring Boot**, ensuring scalable and resilient communication across distributed applications.
- Orchestrated **Spring Batch jobs** for bulk processing of banking transactions, improving accuracy and execution speed.
- Integrated **Spring Cloud** features to achieve distributed tracing and monitoring of mission-critical financial applications.
- Engineered the persistence layer using **Hibernate ORM** and **Spring Data JPA**, enabling seamless and efficient database operations.
- Developed and optimized **SQL queries, joins, and stored procedures** in **MS SQL** to ensure high-performance data retrieval and integrity.
- Containerized microservices with **Docker**, improving deployment portability and reducing environment configuration issues.

- Automated CI/CD workflows with **Jenkins pipelines**, streamlining microservice builds and Docker image deployments into registries.
- Collaborated with DevOps teams to optimize deployment pipelines, reducing build failures and accelerating release cycles.
- Applied **unit testing frameworks (JUnit, Mockito)** to deliver robust, maintainable, and well-tested code for critical banking applications.
- Managed and tracked user stories via **Jira**, leading to a **20% reduction** in issue resolution time and **15% increase** in project efficiency.
- Partnered with cross-functional teams in Agile/Scrum ceremonies, ensuring timely delivery of sprint commitments and improved collaboration.
- Enhanced application performance monitoring and troubleshooting by integrating with tools like **ELK Stack** and **Grafana** for proactive incident management.

Environment: Java (11/17), Spring Boot, Spring Cloud, Hibernate, JPA, MS SQL, REST APIs, Microservices, Docker, Jenkins, ELK Stack, Grafana, AWS

Software Engineering Intern – Niagara Aerospace Museum, USA

May 2023 – Aug 2023

- Designed and implemented an **inventory management system** integrating **QR code scanning** with **MySQL**, reducing manual administrative workload by **40%**.
- Developed a **scalable backend with Express.js** to expose REST APIs, ensuring secure and efficient communication between frontend and database layers.
- Built a **responsive React.js frontend**, leveraging reusable components, hooks, and lazy loading to improve performance and responsiveness by **20%**.
- Migrated and optimized the application for cloud by **deploying on AWS EC2**, managing server configuration, networking, and secure access.
- Designed database schemas, optimized **SQL queries**, and integrated real-time data updates from the museum's operational records.
- Established Agile practices by using **Trello for backlog/user stories** and **Slack for stakeholder communication**, boosting project collaboration by **25%**.
- Conducted **end-to-end testing** using Postman for API validation and React Testing Library for frontend, ensuring functional reliability before client handoff.

Environment: Node.js, Express.js, React.js, MySQL, AWS EC2, Postman, React Testing Library

Software Engineer – Saras India Systems Private Limited, India

Jan 2021 – July 2022

- Designed and developed an **Application Maintenance Dashboard** to monitor customer applications' uptime, health metrics, and error logs, reducing troubleshooting time by **30%**.
- Built backend services in **Java (Spring Boot, JPA, Hibernate)** and **Node.js** for real-time reporting of app health and error diagnostics.
- Integrated **RESTful APIs** to pull monitoring data from distributed systems, ensuring seamless communication across services.
- Developed **interactive dashboards** using **React.js + Chart.js** to provide customer-facing health metrics and SLA compliance reports.
- Engineered backend APIs for **ledger management, invoicing, and tax calculation** within the accounting automation product, integrating with **MySQL/PostgreSQL**.
- Implemented **Redis caching** for frequently accessed customer health data and accounting records, cutting response latency by **40%**.
- Automated **batch jobs** for reconciliation, log cleanup, and health reports, ensuring compliance with internal SLAs and accounting standards.
- Deployed microservices on **AWS EC2** with **load balancing** and used **CloudWatch alarms** to proactively detect service failures.
- Integrated **ELK Stack (Elasticsearch, Logstash, Kibana)** for centralized logging and analytics, enhancing debugging efficiency.

- Collaborated with **auditors, product owners, and DevOps teams** to align product features with regulatory requirements and ensure **99.9% uptime** for client applications.

Environment: Java (8/11), Spring Boot, Hibernate, JPA, MySQL, PostgreSQL, Redis, React.js, AWS EC2, CloudWatch, ELK Stack

Frontend Developer Intern – Ridhan Technologies Pvt Ltd, India

Jan 2020 – Dec 2020

- Partnered with **Delhi Public School (DPS), India**, to develop a **React.js-based digital learning and school management portal** during the COVID-19 shift to online education.
- Collaborated with the school IT staff and Ridhan's backend team in Agile sprints, using **Jira** for sprint planning and **GitHub** for version control.
- Designed and implemented **responsive UI components** using **React.js, Redux, and Material UI**, enabling students and teachers to access courses, assignments, and announcements across devices.
- Built **role-based dashboards** for students, teachers, and administrators, improving usability and reducing navigation time by **30%**.
- Integrated frontend with backend **REST APIs** for attendance tracking, grade submissions, and homework management.
- Enhanced performance by applying **lazy loading, React hooks, and code splitting**, improving portal load speed by **35%**.
- Deployed the application on **Vercel**, ensuring scalable hosting and uninterrupted access for **2,000+ students and faculty**.

Environment: React.js, Redux, Material UI, REST APIs, Vercel, Agile (Jira, GitHub)
