Bay Area, CA • phalnikarrudra@gmail.com • (650) 733-3829 • github.com/rudraphalnikar • linkedin.com/in/rudraphalnikar333

EDUCATION

Purdue University

Bachelor's Degree in Data Science

West Lafayette, IN

Aug 2022 - Dec 2025

- Dean's List Honor
- Relevant Coursework: Data Structures & Algorithms, Machine Learning, Linear Algebra, Artificial Intelligence

EXPERIENCE

Data Analytics Intern

CommScope (Ruckus Networks)

Remote, CA

Jun 2025 - Aug 2025

- Trained and tested NER models to improve product name standardization across platforms, enabling accurate tagging of support content.
- Built SQL views into BigQuery and developed interactive Power BI dashboards, creating unified reporting for customer install base and case history.
- Designed a customer 360 lookup table integrating Support Portal, Salesforce, and Coveo data, forming the foundation for personalized content recommendations (digital twin initiative).

Undergraduate Data Science Researcher

The Data Mine - Purdue University

West Lafayette, IN

Collaboration with Microsoft:

Aug 2024 – May 2025

- Developed a social analysis platform for Minecraft, utilizing AI to extract player behavior insights from text, image, and video content on social media and gaming platforms.
- Built and optimized data pipelines for multi-modal content processing and enrichment using Python, Azure, ETL, Databricks, and Spark.

Collaboration with The Knudsen Institute:

Aug 2023 – May 2024

- Conducted an in-depth time series analysis of procurement trends within the automotive industry during periods of supply chain disruptions (2018-2022).
- Applied Python, Dash, and Tableau to develop and visualize various models for industry behavior, including Time Series Analysis for trend forecasting, Dynamic Time Warping for pattern matching between countries, and ARIMA modeling for seasonal data forecasting.

PROJECTS

Bangalore Property Price Predictor

- Preprocessed a dataset of roughly 13,500 real estate listings, removing anomalies by filtering out unrealistic data points and outliers based on price trends and room configurations.
- Assessed a regression model to predict property prices, subsequently optimizing model performance and accuracy.
- Developed a user interface for the project using HTML, CSS, and JavaScript to enable users to interactively predict home prices on the website.

Athlete Facial Recognition

- Developed a dataset of athlete faces through web scraping and applied image preprocessing using OpenCV and wavelet transform.
- Trained SVM and logistic regression classifiers on preprocessed image data for facial recognition.

Google Stock Anomaly Detection

- Developed a time series anomaly detection model using an LSTM Autoencoder to identify unusual patterns in Google stock prices, covering a 20-year period.
- Implemented data preprocessing techniques, including train-test split, normalization, and time series sequencing, to enhance model training and anomaly prediction accuracy.

SKILLS

Technical Skills: Python, R, SQL, Java, SAS, Tableau, Scikit-Learn, TensorFlow, PyTorch, NLP, CSS, JavaScript, HTML

Languages: English (Native), Marathi (Native), Spanish (Working Proficiency)

Extracurricular Activities: The Data Mine, Purdue Kahaani, Boiler Bhangra, ML@Purdue
