Cincinnati, OH | 682-376-3312 | [rudviqbhavsar@gmail.com](mailto:rudviqbhavsar@gmail.com) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## SUMMARY

- 3+ years of experience with a strong foundation in Full-stack Development, Database Management, and Software Engineering and adept at leveraging technologies to design and implement innovative solutions
- Experienced in using C, C++, Python, SQL, SAP ABAP, Java, JavaScript, React JS, TypeScript, Git, GitHub, React Native, Selenium, Azure, AWS, Linux, and ServiceNow for building applications and solutions

## EDUCATION

|                                                                                                            |                        |
|------------------------------------------------------------------------------------------------------------|------------------------|
| <b>The University of Texas at Arlington</b> , Arlington, TX<br>Master of Science in Computer Science       | August 2022 – May 2024 |
| <b>Savitribai Phule Pune University</b> , Pune, India<br>Bachelor of Engineering in Information Technology | August 2016 – May 2020 |

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>Student Computer Assistant, University of Texas</b> , Arlington, TX<br>• Developed responsive web applications utilizing <b>HTML</b> , <b>CSS</b> , and <b>JavaScript</b> , driving a <b>20%</b> increase in administrative effectiveness<br>• Administered <b>SQL</b> databases and helped in <b>lab management</b> and <b>ticket resolution</b> , which reduced database errors by 30%<br>• Implemented unit testing practices and leveraged <b>Git</b> for version control, enhancing collaboration by <b>50%</b> within the IT team                                                                                                                                                                                                                                                                     | December 2022 – May 2024    |
| <b>Systems Engineer, Infosys</b> , Pune, India<br>• Developed and optimized <b>SQL</b> databases to seamlessly align with customer requirements and boost system functionality, achieving a <b>30%</b> decrease in database response time<br>• Engineered an efficient <b>Python</b> application to automate <b>SAP ERP</b> software manual processes, delivering a <b>75%</b> reduction in user effort<br>• Customized SAP ERP applications developed using <b>SAP ABAP</b> to overcome complex business requirements and expand the system capacity, leading to a <b>25%</b> decrease in error rates<br>• Implemented and managed incident, problem, and change management through <b>ServiceNow</b> and achieved <b>90%</b> resolution rate within SLA targets and <b>25%</b> reduction in average downtime | November 2020 – August 2022 |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|
| <b>Wordle - Five-lettered word guessing game</b>   React JS, JSX, JavaScript<br>• Designed and developed a website using <b>React JS</b> that implements a word-guessing game. Users can play the game by guessing a <b>five-lettered word</b> within <b>six</b> tries. The website features a <b>color code</b> display for each letter entered by the user, providing feedback on the correctness of their guesses. Deployed the project on <b>Netlify</b> for accessibility. You can access the project <a href="#">here</a> | [ <a href="#">Github Link</a> ]        |
| <b>Social Me – Location based Social App</b>   React Native, TypeScript, Firebase<br>• Developed a location-based social app that notifies users when their friends enter a certain area, with added features such as <b>friend management</b> and <b>status setting</b> , built using React Native and Firebase                                                                                                                                                                                                                | [ <a href="#">Private Repository</a> ] |
| <b>Edumetrics - A Student Management App</b>   React JS, CSS, JavaScript, PHP<br>• Developed a <b>web application</b> for managing course/university-related processes with <b>multiple</b> user roles<br>• Enabled features for students to check course details, upload assignments, and <b>chat</b> with assistants                                                                                                                                                                                                          | [ <a href="#">Github Link</a> ]        |
| <b>Wishlist Wanderers</b>   HTML/CSS, JavaScript, SQL, PHP<br>• Developed an engaging online platform <b>connecting</b> individuals based on <b>shared interests</b> and <b>life goals</b> , fostering community and empowerment to achieve aspirations                                                                                                                                                                                                                                                                         | [ <a href="#">Github Link</a> ]        |
| <b>GotPot - Pothole Reporting App on the Road</b>   Java, Firebase, XML<br>• Designed and built an app using <b>Java</b> and <b>Firebase</b> to let users report potholes on road to Government using a <b>camera</b> and <b>location</b> of device to designated politician of area                                                                                                                                                                                                                                            | [ <a href="#">Private Repository</a> ] |
| <b>CONTRACTOR - Supply ordering portal</b>   HTML/CSS, JavaScript, SQL, PHP<br>• Built a website using <b>JavaScript</b> and <b>SQL</b> focusing on cutting extra costs required for Government construction projects and avoiding money laundering by contractors<br>• Involved into algorithm and use cases design and integration of <b>Google Distance Matrix API</b> and <b>Google Maps API</b>                                                                                                                            | [ <a href="#">Github Link</a> ]        |

| <b>Coursera: Google</b> Data Analytics Professional Certificate [ <a href="#">Link</a> ]                   | January 2023 |
| <b>Microsoft</b> Technology Associate: Database Administration Fundamentals (MTA) [ <a href="#">Link</a> ] | May 2019     |

## TECHNICAL SKILLS

|                                                                                                                                                                                   |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Programming Languages</b> : C, C++, Python, SQL, ERP, SAP ABAP, Java, HTML, CSS, React JS, PHP, TypeScript                                                                     |
| <b>Tools &amp; Technologies</b> : Git, Github, React Native, JIRA, Selenium, Microsoft Azure, AWS, Linux, Docker, Android Studio, Service Now                                     |
| <b>Concepts</b> : Object-Oriented Programming (OOP), Data Structures, Database Management Systems (DBMS), Machine Learning, Artificial Intelligence, Cloud Computing and Big Data |

## ACHIEVEMENTS

- Selected to participate in SMART INDIA HACKATHON 2020 - Internal Hackathon for problem statement of Government of Goa, India
- Advanced to SMART INDIA HACKATHON 2019 Grand Finale round for a problem statement presented by Central Ministry of India
