SUMMARY

I'm passionate about creating impactful solutions by combining software development, database management, and data analytics. I enjoy building applications, designing robust systems, and analyzing data to derive actionable insights. Every project is an opportunity to innovate, optimize, and make a real-world impact.

SKILLS

Programming	Python, C/C++, Java, SQL, JavaScript
Web	React.js, Node.js, Django
Data Visualization	D3.js, Power BI, Tableau
Tools	NetSuite, Excel, Microsoft Office, Jupyter, Linux,

PROJECTS

ExtinctAnimalTracker

- Developed an interactive data platform using D3.js and Python, enabling dynamic visualizations (heatmaps, pie charts, bar graphs) for extinction trends.
- Built and validated predictive models for extinction rate estimation, integrating historical datasets and user-selected regional filters.
- Optimized the data pipeline for near real-time updates, improving forecast reliability.

Healthcare Analytics Dashboard

- Built an interactive Power BI dashboard analyzing hospital and patient data (1,000 patients, 5 hospitals) to identify trends in treatment effectiveness, costs, and recovery rates.
- Processed and modeled data using Python (Pandas, NumPy) and structured storage in SQL.
- Implemented DAX metrics for total treatment costs, recovery scores, and age-based insights.

Real-Time Crypto Analysis Dashboard

- Built a Streamlit dashboard integrating Coinbase API for real-time cryptocurrency price and volume data.
- Developed LSTM models in Python (Pandas, NumPy) to forecast crypto prices and trends.
- Implemented data processing pipelines for cleaning, aggregation, and storage of historical and live data.
- Created interactive visualizations including candlestick charts and technical indicators (SMA, EMA).

Live Object Recognition Using YOLO

- Developed a real-time object detection system using YOLO algorithm to identify and classify objects in images.
- Implemented R-CNN techniques for accurate dimension estimation, enabling calculation of object area and weight.
- Engineered a user-friendly interface for seamless interaction and calibration.
- Optimized detection speed and achieved 98.4% recognition accuracy on diverse datasets.

WORK EXPERIENCE

- **India, Mumbai (Nov 2023 – Dec 2023):** Created 5+ responsive websites using HTML and CSS; transformed over 20 design mockups into functional sites.
- **India, Mumbai (Jan 2024 – Mar 2024):** Preprocessed datasets up to 5,000 records and trained various machine learning models; improved model accuracy by 15%.

EDUCATION

2024 - Present M.S. (Computer Science at **University of Utah**), GPA: 3.23/4.0
2020 - 2024 B.E. (Information Technology at **University of Mumbai**), GPA: 8.88/10.0

PUBLICATIONS

Live Object Recognition using YOLO (2024)

[Read Full Paper](#)

The research demonstrates a real-time object recognition system using the YOLO algorithm, achieving 98.4% accuracy. The system processes high-speed image data and measures object dimensions with precision.

CERTIFICATIONS

Data Analysis Bootcamp – 21 Real World Case Studies, Udemy (2021)

Gained hands-on experience in Python, Pandas, NumPy, Matplotlib, Seaborn, Plotly and Google Data Studio through practical data analysis and visualization projects.
