

OBJECTIVE

Recent college graduate with a major in computer science and minor in statistics. Experienced in computer programming, data analysis, supervised machine learning, and technical troubleshooting. Thrives in fast-paced environments that provide challenges and opportunities to learn. Seeking full-time positions in the data science field.

EDUCATION

University of North Carolina at Chapel Hill

August 2016 - May 2020

Bachelors of Science in Computer Science, Minor in Statistics

Major GPA: 3.6, Dean's List 4 semesters

Relevant Coursework: Methods of Data Analysis, Files and Databases, Spreadsheet Models, Algorithms & Analysis, Data Structures, Modern Web Programming, Artificial Intelligence, Computer Organization, and Intro to Game Dev

TECHNICAL SKILLS

Data science: SQLite, R, NumPy, Pandas, Matplotlib, SciKit-Learn, MS Excel, MS Access

Object-Oriented Programming & Web Dev: Python, Java, C#, HTML, CSS, JavaScript

Tools: Unity, Git, ServiceNow

RELATED EXPERIENCE

UNC Information Technology Services

October 2018-Present

Service Desk Technician

Chapel Hill, NC

- Providing technical assistance for incoming queries and issues related to computer systems, hardware, and software
- Performing remote troubleshooting through diagnostic techniques and pertinent questions
- Handling queries and service requests through online chat consultations via ServiceNow

The Children's Place

May 2017-August 2017

Sales Associate

Concord, NC

- Displayed familiarity with the products sold within the store and offered assistance to customers when needed
 - Operated cash registers, managed financial transactions, and balanced drawers
-

PROJECTS

Projecting Offensive Stats for 2020 NBA Draftees (Python, Pandas, Scikit-Learn)

May 2020

- Used K-nearest neighbor regression to predict offensive NBA stats for collegiate players entering the 2020 NBA draft
- Created training and validation sets from a preprocessed CSV file containing vitals, collegiate and professional stats for the rookies of the last 10 years

Predicting Prices of Diamonds (R programming)

December 2019

- Developed a multilinear regression model to predict prices of diamonds in a given data set based on their characteristics such as number of carats, color, clarity, and clarification
- Used this regression model to find the correlation between these characteristics and price

UNC Makeathon (Unity)

February 2019

- Developed a business model for the idea of Virtual Reality Therapy to assist those with mental illnesses
- Created a virtual environment in Unity and implemented the demo in Google Cardboard
- Performed a professional pitch to crowd of UNC faculty members
- Second place winner of Best Digital Product Award

American Tire Distributors Data Hackathon (Python, NumPy, Pandas, Scikit-Learn)

March 2019

- Constructed a data model using random forest regression that utilized vehicle registration data and other external data sets to predict demand for certain types of tires
 - Second place winner of Best Data Model Award
 - First place winner of Unique Thinker Award
-

ACTIVITIES

HackNC

August 2018-October 2018

- Collaborated with other committee members to organize and set up North Carolina's largest annual hackathon
- Oversaw how the logistics can coincide with the theme of the hackathon
- Coordinated between university personnel and committee leaders to make sure the 24-hour event runs smoothly
