EDUCATION

- California State University San Bernardino at San Bernardino, CA** Aug 2022-Dec 2024
Master of Science in Computer Science
GPA: **3.3/4.0**
- Ganpat University, Ahmedabad, GJ, India** Aug 2019-Jun 2022
Bachelor of Technology in Computer Engineering
GPA: **3.17/4.0**
- Atul Polytechnic, Khadat, GJ, India** Aug 2016-Apr 2019
Diploma in Computer Engineering
GPA: **3.36/4.0**

TECHNICAL SKILLS

- Programming Languages:** Python (Pandas, NumPy, Matplotlib), SQL
- Datawarehouse:** MySQL, MS Access, Google Big Query, SQL Server
- Data Visualization:** Tableau, Power BI, Microsoft Office Suite (Excel, PowerPoint, Visio), Lucid Chart, Looker
- Software Tools:** Dataiku, Microsoft Visual Studio, Dynatrace, GitHub, Figma, Alteryx
- Agile Tools:** Jira, Confluence, Azure DevOps Board, Miro Board, MS Project, Smartsheet, Keynote
- Methodologies:** Scrum, Kanban, SDLC, Project Management, Product Lifecycle, Documentation
- Other:** MS Office Suit (Word, Outlook), Communication skills, Cross-functional teamwork

EXPERIENCE

Kaseya, USA | Junior Business Analyst

Apr 2023- Jul 2023

- Utilized Python to analyze complex datasets of over 1.5k healthcare records, identifying key patterns and trends that informed five major business decisions, such as optimizing patient care programs.
- Worked on SAP Business objects BI tool for regulatory reporting and visualization requirements.
- Created detailed UML diagrams to visualize system requirements, process flows, and architectural designs, facilitating.
- Authored Business Requirement Documents (BRDs), conducted regression and UAT testing, and deployed tools meeting business needs.
- Designed scalable ETL pipelines using Apache Airflow and SQL to process healthcare financial data, enhancing real-time transaction visibility and supplier payment forecasting.
- Leveraged Microsoft Excel, Power BI, and Tableau to interpret data, generating insights that informed data-driven decisions and enhanced stakeholder presentations.
- Participated in the implementation of an EHR system, ensuring smooth integration and minimal disruption to daily operations.
- Utilized workflow, process diagram and GAP Analysis to derive requirements for existing systems enhancements.
- Implemented robust data cleaning and wrangling techniques, enhancing data accuracy and consistency, resulting in a 40% improvement in the quality of healthcare data.

Capillary Technologies, INDIA | Junior Business Analyst

May 2021-May 2022

- Conducted advanced financial modeling and trend analysis using Python and SQL to identify anomalies, reducing reporting discrepancies by 20%.
- Utilized SQL to extract and analyze patient data to support decision-making and create detailed reports for senior management.
- Collaborated with healthcare professionals and IT teams to gather and analyze business requirements for the implementation of electronic health records (EHR) systems.
- Involved in preparing project plans and identifying major milestones for each stage as per the SDLC model (Agile/Scrum Methodology).
- Developed dashboards and reports to monitor KPIs, identify trends, and drive decision-making aligned with organizational goals.
- Analyzed financial data from global service operations and made recommendations for improvements.
- Analyzed VLOOKUPS and HLOOKUPS to ensure strict data verification to make it possible to cross-check data from different datasets and ensure uniformity thus minimizing data errors by 20%.
- Facilitated and participated in Joint Application Development (JAD) sessions, and conference calls to keep executive staff and the team members apprised of goals, project status, and resolving issues.
- Extensive experience in leading User Acceptance Testing (UAT) sessions and collaborating with stakeholders to validate software functionality.
- Built interactive dashboards using Power BI and Tableau to visualize key business metrics, leading to a 15% increase in data-driven decision-making by stakeholders.

ACADEMIC PROJECTS

Financial Credit Risk Analysis | R programming, Classification Models

- Analyzed and explored data financial records of **0.1 million** customers to identify loan outcome and defaulter patterns.
- Developed **Supervised Learning Models** to predict loan defaulters and provide high returns with low risk for investors.
- Performed hyper-parameter tuning in addition to cost-based analysis to increase annual return by **5%**

KPMG Virtual Internship | Data Analysis: MS Excel (Pivot Table, VLOOKUP, Filter), Tableau

- Analyzed and explored **38k+** 'customer records' to assess the data quality, accuracy, uniqueness, validity, etc. Identified quality issues, limitations and gathered external data for modelling purpose.
- Developed a data model & utilized Pivot tables and excel functions to interpret data distributions, trends, and patterns.
- Built Tableau dashboard to visualize target customer demographic attributes and identify top **200 high value** customers.

Southwest Airlines Data Analysis | (Tableau, SQL, Statistics, MS Excel)

- Examined **3.7 million** flight records with **50** variables to analyze the performance of Southwest Airlines in FY 2023.
- Recorded **16.77%** of total Southwest flight delays amongst **11** other competitor airlines and visualized trends in delay.
- Built over **20** dashboards using Tableau Software to accomplish a comparative analysis across several airlines.
