EDUCATION

MS in Information Systems | Syracuse University | Syracuse, NY

August 2023 - May 2025

Relevant Coursework: Database Management, Data Science, Data Analysis & Decision Making, Machine Learning & Predictive Analytics, Cloud Data Warehousing, Business Intelligence & Data Visualization, Data Mining & Big Data Analytics

TECHNICAL SKILLS

Programming Languages: Python (Pandas, NumPy, Matplotlib, Scikit-Learn), SQL, R (R-Studio)

Databases: MySQL, PostgreSQL, Oracle, Redshift, BigQuery, SQL Server

Tools: PowerBI, Tableau, Snowflake, SSMS, MS Excel (Pivot tables, VLOOKUP, VBA, Data Validation), DBT, ELT, GitHub

Cloud Technologies: Azure, AWS (S3, Glue, RDS), GCP, Power Apps, Power Automate

Certifications: Snowflake Data Warehousing, Python, Advanced MS Excel

PROFESSIONAL EXPERIENCE

Research Assistant – Data Analytics & AI | Syracuse University | Syracuse, NY ([GitHub](#))

July 2025 – Present

- Built Python scripts using Pandas and Polars, which **automated descriptive statistics** for multiple public datasets combining **200K+** records, **reducing summarization time by 40%**.
- Extracted actionable insights** from F1 datasets **with LLMs**, validating natural language outputs against source data, **improving query accuracy by 25%**, and ensuring reliable analysis for performance evaluation.
- Produced AI-driven deepfake audio interviews **using Python, edge-tts, and ffmpeg**, documenting reproducible workflows and demonstrating innovative data storytelling techniques.
- Evaluated workflows **across Python, Pandas, Polars, and LLMs** by benchmarking accuracy and efficiency, recommending optimized approaches that significantly improved analytical speed and enhanced overall research outcomes.

Data Analyst Intern | Syracuse University | Syracuse, NY

August 2024 – June 2025

- Analyzed 1M+ records from Snowflake using SQL joins and aggregations** to track program utilization, **helping identify three underused services** that informed leadership decisions to reallocate resources more effectively.
- Cleaned and transformed compliance data with Python (Pandas), **standardizing 25+ recurring reports, improving accuracy by 20%**, and enhancing reporting efficiency for stakeholders.
- Designed Tableau dashboards with calculated fields and dynamic filters** to visualize program KPIs, **reducing manual reporting time by 30%** and enabling stakeholders to monitor performance in real time.
- Partnered with six stakeholder groups to gather reporting requirements and delivered tailored dashboards, **increasing adoption of analytics tools by 40%**, and fostering a culture of data-driven decision-making.

Data Analyst Trainee | Wipro Limited | Pune, India

March 2022 - May 2022

- Queried 500K+ operational records using SQL aggregations** to compare costs by department, uncovering inefficiencies that enabled managers to **reduce expenses by 15%** and streamline operational budgets.
- Built Tableau dashboards for KPI tracking with calculated metrics, **reducing reporting cycle time from weekly to daily** and empowering leadership with timely visibility into performance trends.
- Developed forecasting models** in Python (Scikit-learn) to predict business demand, **improving managerial decision-making accuracy by 20%** and providing actionable insights for resource planning and capacity management.
- Optimized SQL queries** by adding composite indexes, restructuring nested subqueries, and removing redundant joins, which **improved data retrieval speed by 25%** and enhanced the performance of critical reporting workflows.

PROJECTS

NYC Air Quality Analysis and Health Impact ([GitHub](#))

- Performed correlation and regression analysis** on 10+ years of pollution-health data in Python, identifying PM2.5 as the strongest health risk factor, enabling evidence-based health interventions.
- Built XGBoost models with hyperparameter tuning**, forecasting pollution and health outcomes with **86% accuracy**, supporting proactive environmental policy planning and decision-making.
- Designed Matplotlib visualizations to map high-risk areas, **allowing policymakers to interpret complex data trends** and take preventive action to protect public health.

EV Trends in New York State

- Cleaned and merged** EV registration, rebate, and charging datasets using **Python joins and validation checks**, ensuring accurate, consistent, and analysis-ready data for insights into adoption patterns.
- Built Tableau dashboards with **geospatial and time-series analysis**, visualizing EV adoption growth and charging infrastructure trends, **enabling stakeholders to track market development** effectively.
- Analyzed manufacturer trends and rebate-linked adoption to identify Tesla's market dominance and quantify the effect of policy-driven growth on EV adoption in New York State.
