(857)230-6817 | [Email](#) | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

## EDUCATION

### Northeastern University

Boston, MA

*Master of Science in Information Systems*

September 2023 – May 2025

**Coursework:** Advanced Data Architecture and Visualization, Data Science Engineering, Big Data Technologies

### G. Narayanamma Institute of Science and Technology(JNTUH Affiliated)

Hyderabad, India

*Bachelor of Technology in Data Science and Information Technology*

July 2017 – June 2021

## TECHNICAL SKILLS

- **Programming Languages** : SQL, Python, PL/SQL, Java, JavaScript, R
- **Libraries/ Frameworks** : PySpark, Scikit-Learn, Pandas, NumPy, Seaborn, TensorFlow, Matplotlib, LLMs, PyTorch
- **Database Systems** : Oracle, MySQL, SQL Server, Amazon Redshift, DynamoDB, MongoDB, Snowflake
- **Data Visualization** : Tableau, PowerBI, QuickSight, QlikView, Maximo, Advanced Excel
- **Big Data Technologies** : Talend, Alteryx, Hadoop, ETL/ELT, Hive, Apache Airflow, Apache Kafka, Apache Spark
- **Cloud Technologies** : AWS(S3, Airflow, Glue), Snowflake (Snow Park, Snow Pipeline), Azure
- **Collaboration Tools** : JIRA, Git, Agile (Scrum), Confluence

## WORK EXPERIENCE

### Business Intelligence Assistant | Northeastern University, Boston, MA

September 2024 – May 2025

- Mentored 90+ students in BI-focused labs emphasizing data quality, dashboard design, and root cause analysis using **Power BI**, **Tableau**, and **SQL** for operational performance.
- Designed and maintained scalable **ETL pipelines** across **Azure/AWS** to streamline internal data collection and aggregation, ensuring consistent and accurate data delivery.
- Served as SME on BI tools, driving data-driven culture and cross-functional collaboration.
- Pioneered interactive **Power BI** dashboards for **supply chain** capstone projects, visualizing predictive analytics which improved inventory forecasting accuracy by 15% and optimized resource allocation.

### Data Analyst | Accenture (Client – COTY), India

September 2021 – August 2023

- Built and maintained BI tools and ETL workflows using **Alteryx** and **Azure Data Factory**, aggregating and analyzing 1M+ daily records to uncover business trends and performance metrics.
- Reduced fulfillment time by 30% by conducting root cause analysis and designing **QuickSight** dashboards that visualized **operational KPIs**, enabling faster, data-driven decisions across supply chain teams.
- Partnered with marketing and sales teams to evaluate channel effectiveness and present insights to senior leadership for strategy refinement.
- Analyzed global sales and supply chain data for performance optimization, leveraging **QlikView**, **QuickSight**, and **Excel** to inform compensation strategy and reduce cancellations.
- Partnered with 5 **cross-functional** teams to gather requirements, define KPIs, and deliver interactive **PowerBI** dashboards that reduced decision-making time by 40% through clear visualization of key metrics and automated reporting.

## PROJECTS

### Patient Readmission Risk Analysis | *Python, SQL, Snowflake, Redshift, Airflow, QuickSight, Synthea*

Engineered an end-to-end pipeline using synthetic EHR data to predict 30-day hospital readmissions by labeling cases in Python, transforming data with SQL in Snowflake, automating workflows with Airflow, and visualizing model-driven insights using SHAP and Amazon QuickSight.

### Supply Chain Quality Analytics Dashboard| *Python, SQL, Snowflake, PowerBI, Sigma*

Developed comprehensive quality monitoring system tracking product freshness, inventory accuracy, and order fulfillment metrics across multiple distribution centers.

### Motor Vehicle Crash Data Analysis | *MySQL, Alteryx, Talend, ADF, QuickSight, Tableau, PowerBI*

Analyzed traffic crash data from three major cities to generate actionable insights for public safety; developed interactive dashboards highlighting crash frequency, high-risk zones, and contributing factors to support data-driven urban planning and accident prevention.
