

Rushmitha Parvathaneni Data Analyst

rushmitha@jobhuntmails.com | (617) 949-9807 | USA | [LinkedIn](#)

Summary

Detail-oriented Data Analyst with 4+ years of experience in data extraction, transformation, and analysis across multiple industries. Proficient in advanced SQL, Python, and R for statistical analysis, data cleaning, and feature engineering. Skilled in building automated ETL pipelines, validating complex datasets, and creating interactive dashboards using Power BI and Tableau. Adept at collaborating with cross-functional teams to deliver insights that drive business decisions and improve operational efficiency in fast-paced environments.

Technical Skills

- **Databases & Query Languages:** AWS Athena, Azure SQL Database, Advanced SQL (window functions, CTEs, subqueries, joins)
- **Programming & Statistical Tools:** Python (Pandas, NumPy, Seaborn, SciPy), R (ggplot2, statistical tests), SQL
- **ETL & Data Processing:** AWS Glue, data cleansing, validation, automation of ETL pipelines
- **Data Visualization & BI Tools:** Power BI (DAX, slicers, bookmarks, drill-through), Tableau (dashboards, filters, Tableau Server)
- **Statistical & Analytical Techniques:** Hypothesis testing (ANOVA, Tukey's post-hoc test, bootstrapping), cohort analysis, correlation analysis, feature engineering
- **Version Control & Documentation:** Git, Confluence
- **Methodologies & Soft Skills:** Agile, requirement gathering, cross-functional collaboration, data storytelling, KPI definition, performance monitoring
- **Other Tools & Technologies:** JSON, CSV data handling, data profiling, data quality assurance, business insights reporting

Professional Experience

Data Analyst, Deutsche Bank

01/2024 – Present | Remote, USA

- Worked on Customer Segmentation and Profitability Analysis project collaborating with Marketing, CRM, and Product teams using Agile methodology and requirement gathering sessions. Analyzed US retail customers to identify profitable segments and targeted marketing opportunities.
- Utilized SQL and advanced SQL techniques like window functions and CTEs to extract and optimize data from AWS Athena databases. Handled raw data from CRM (CSV, JSON) and transactional systems ensuring efficient ETL pipelines using AWS Glue.
- Performed exploratory data analysis including correlation analysis and hypothesis testing to understand customer behaviors and validate segmentation assumptions which improved feature selection accuracy by 15%.
- Employed Python libraries such as Pandas and NumPy for feature engineering and behavioral metric calculations. Applied statistical analysis and cohort analysis to track segment performance trends and customer retention patterns.
- Conducted rigorous data validation and cleansing using AWS Glue workflows. Automated ETL processes reduced data processing time by 30% ensuring high-quality integrated datasets from CRM, transaction, and product systems.
- Developed interactive Power BI dashboards incorporating slicers, bookmarks, and drill-through features. Used DAX formulas for advanced profitability calculations enabling stakeholders to visualize segment revenue contributions and optimize marketing spend.

Data Analyst, Mphasis (Client: FedEx)

01/2020 – 08/2022 | India

- Directed the Delivery Time Variance Analysis Across Regions by collaborating with FedEx logistics and BI teams to define KPIs and regional delivery metrics. Gathered requirements through cross-functional sessions and aligned on critical performance dimensions.
- Extracted and transformed delivery datasets using advanced SQL including joins, CTEs, subqueries, and window functions on Azure SQL Database. Ensured 100% data accuracy through rigorous validation, cleansing, and consistency checks across sources.
- Used Python (Pandas, Seaborn, SciPy) for preprocessing, visualizing, and statistically analyzing delivery performance. Detected over 25% variance in delivery times between regions using ANOVA and Kruskal-Wallis tests.
- Applied statistical analysis in R to reinforce Python findings using Tukey's post-hoc test and bootstrapping techniques. Created visualizations with ggplot2 to highlight regional discrepancies and variance patterns in delivery performance.
- Developed and deployed interactive Tableau dashboards with filters for courier, route, and region. Increased stakeholder data engagement by 40% through intuitive visual storytelling and publishing dashboards to Tableau Server.
- Documented the full analytics process in Confluence including SQL logic, Python and R workflows, statistical methodology, and business insights. Ensured 100% reproducibility by maintaining all scripts in version-controlled Git repositories.
- Delivered insights that led to a 12% reduction in delivery time variability by recommending courier reallocation and scheduling changes. Enabled continuous monitoring through automated Tableau dashboards with weekly refresh schedules.

Education

Northeastern University, College of Engineering – Boston, MA, USA

Master of Science in Data Analytics Engineering

09/2022 – 04/2024

Manipal Institute of Technology – Manipal, India

Bachelor of Technology in Electrical and Electronics Engineering

07/2017 – 05/2021
