Ryan Kulfan

SUMMARY

Computer science graduate with a strong enthusiasm to kick-start a tech career, showcasing a deep passion for programming through various small and large-scale projects. Eager to leverage existing knowledge and acquire new skills in a professional setting with a drive for success.

EDUCATION

New Jersey Institute of Technology

Sep 2021 - May 2025

Bachelor of Science in Computer Science

Newark, NJ

- Honors: *magna cum laude* (GPA 3.67/4.0)
- Relevant Coursework:
 - Programming Language Concepts - built a simple Perl-like programming language using C++, composed of a lexical analyzer, parser, and interpreter
 - Intensive Programming in Linux - experienced hands-on programming of relatively large applications using C, PHP, and Python along with Apache Web Server and MySQL databases
 - Advanced Data Structures and Algorithm Design - focused on discrete mathematics, search trees, hashing, graphs, and number theory
 - Guided Design in Software Engineering - focused on project management, and version control, and included a final software production project that was done in collaboration with 5 team members
 - Computer Science Project - focused on real-world project-based learning with a semester-long project for a sponsoring company

KEY SKILLS

Technical Skills:

- Proficient: Python, Git
- Experienced: C/C++, SQL, Kotlin, XHTML, CSS, JavaScript, React
- Familiar: Java, PHP, Bash, AWS, TypeScript, Rust, Django, Docker, RESTful APIs

Other Skills: Organization, Problem-solving, Persistence, Active listening, Responsibility, Collaboration

PROJECTS

Discord Bot

- Personal Discord bot created using Python for users to interact with
- Consists of interactive minigames such as Hangman, Yahtzee, and Wordle
- Utilizes PostgreSQL as a database for storing user statistics

Drop Shipping Website

- Created as an assignment for Intensive Programming in Linux
- Uses Bash to automate the updating of the website contents
- Product information is scraped from two vendors using the XML Document Object Model in Python, then inserted into a MySQL database
- Web pages are dynamically generated using PHP to retrieve product data and insert customer data into the database

Mobile App - Professional Women's Hockey League

- Created using Kotlin as a final project for Android Application Development
- Provides the current season's schedule and standings and allows users to enable notifications for their favorite team
- Utilized GitHub's organizational tools to track production and tasks
- Makes use of a public API and push notifications

Resume Analyzer Website

- Allows users to upload their resume combined with a job description, and provide a fit score and feedback for improvement using natural language processing (NLP)
- Designed the UI with JavaScript
- Used Python to create functions to act as a backup in the event the NLP failed, and to create valid backend tests for those functions

[Shermie Galaga](#)

- Project sponsored by navitend for Senior Capstone aimed to create a Galaga-like browser game using navitend branding
- Established the project files and organized directories for team collaboration
- Defined the enemy movement patterns, including entry patterns, diving patterns, and group oscillation

HONORS

- Dean's list for 8 semesters | Sep 2021 - May 2025

ACTIVITIES

Students For Hunger Relief (SFHR) General Body Member

- Attended monthly events to make and deliver food to communities in need in the local Newark area

National Residence Hall Honorary (NRHH)

- Participated in an organized community cleanup event around the local Newark area
