Seasoned Java Developer with 4+ years of experience in designing, developing, and integrating scalable applications. Proficient in Java, Spring Boot, and Groovy on Grails, with additional expertise in frontend technologies including Angular and TypeScript. Skilled at transforming complex requirements into efficient, maintainable code, with a proven ability to lead and support projects in fast-paced, competitive IT environments.

SKILLS

- **Languages:** Java, Groovy, JavaScript, Python (Basic)
- **Frameworks/Tools:** Spring, Spring Boot, Spring MVC, Hibernate, JPA, Grails, Junit, REST APIs, Microservices
- **Web & Frontend Technologies:** Angular (v11+), HTML5, CSS3, Bootstrap, Angular Material, React,
- **Databases:** MySQL, NoSQL (MongoDB, Elasticsearch), RDS
- **Cloud & DevOps:** AWS services (SQS, Lambda, S3, CloudWatch, Elastic Cache (Redis)), Git, GitHub, Docker, Kafka
- **Other Tools:** Gradle, Maven, Jira, Kibana, Apache Tomcat, Nginx
- **Methodologies:** Agile, Scrum, TDD
- **OS & IDEs:** Windows, Linux, macOS | IntelliJ, Eclipse, VS Code, NetBeans
- **Soft Skills:** Agile mindset, Collaboration, Communication Skills, Problem-solving, Initiative, Critical Thinking, Adaptability, Time Management, Leadership, Attention to Detail

Experience

CEDARGATE TECHNOLOGIES | JULY 2022 – MARCH 2025

Role: Software Engineer

Responsibilities:

- Boosted database write performance **by 97% through multithreaded JDBC batch processing using Executor Service.**
- **Reduced API response time by 80% using Elasticsearch query tuning and AWS Elastic Cache integration.**
- Implemented **Search After for pagination**, reducing **Elasticsearch cluster load by 60%.**
- Integrated **CI/CD** pipelines using **Jenkins, Maven, GitHub, and Gradle with 90%+ test coverage.**
- Developed **JWT-based** stateless authentication using **Spring Security**
- Automated cluster health checks **with Python-based multi-threaded monitoring**, reducing **downtime by 30%.**
- Built and documented **RESTful APIs** using **Spring Boot and Hibernate** aligned with Swagger/Open API specs.
- Built complex features using core Java utilizing **Time API, Streams, Parallel Streams**, which helped to efficiently perform business operations on millions of records.

- Automated filter creation, eliminating manual work and improving efficiency by 98%, ensuring dynamic data filtering and accuracy across the application
- Collaborated with 5+ cross functional teams like Enterprise Architecture, Infrastructure and Business Analyst team on technology decision and technical designs.
- Involved in all phases of software development lifecycle (SDLC) including design, development, implementation, unit testing, and on call support during production live.
- Documented code, design, and workflow for better maintenance of the solution.

Environment: Java8, Amazon Web Services (AWS), Amazon SQS, Spring MVC, Spring Boot, Groovy Grails, REST, Hibernate, Junit, GitHub, Gradle, Apache Tomcat.

F1 SOFT | JAN 2022 – JUNE 2022

Role: Associate Software Engineer

Responsibilities:

- Customized Open-Sourced Project Management Tool Redmine and deployed in Production level.
- Developed a **Reactive form module** that handle the challenge for Fonepay customer.
- Created **RESTful APIs** and backend services in **Java and Spring boot** to handle data processing and integration with frontend components.
- Added a search functionality in saved data removing minor bugs thus improving the user experience of the app.
- Worked in using **Angular components, Forms, Events, Routes, Directives, Services and Pipes Concept.**
- Worked with **Event Emitter** class to extend Rx JS (Reactive Programing) to send arbitrary values for transmission of data between components.
- Extensively used JavaScript/Typescript, and JSON to build highly interactive web pages.
- Added a functionality that allows the user to drag and drop categories inside the same component while keeping the tree hierarchy.
- Improved the UI using **Angular 11, Angular Material, Bootstrap.**
- Created Res-useable components, Custom Modules, Custom Directives, Pipes, Services in Angular
- Implemented HTTP Request to get information from web servers and process JSON information to render in the UI by utilizing observables

Environment: Java8, Microservices, Spring MVC, Spring Boot REST, Material UI, HTML5, JavaScript, Gradle, Angular Bootstrap, Hibernate, GitHub, Maven, Apache Tomcat, Nginx.

TUNA TECHNOLOGIES | JAN 2021- DEC 2021

Role: Java Backend Developer

Responsibilities:

- Developed the backend for university library clearance module backend using **Spring Boot with Java 8**, applying **Lambda expressions, Stream API, Time API, and functional programming** concepts to streamline due-book tracking and student clearance validation.

- Designed and implemented **RESTful APIs** to fetch book issue status, update clearance flags, and serve frontend requests utilizing **Hibernate** to interact with Database for any transaction.
- Integrated an email notification system that automatically sends alerts to students 5 days before book due dates using **Spring Scheduler**.
- Used Core Java concepts like **Collection Framework, Multi-threading, Concurrent Object-Oriented programming, Thread pools and Externalization**.
- Implemented **user authentication using JWT with Spring Security**, ensuring secure login and token-based session management for users.
- Followed **modular backend design principles** by separating the application into controller, service, repository, and utility layers, ensuring clean architecture and maintainability.
- Utilized **MySQL** for managing book transactions, user clearance status, and system logs.
- Implemented scheduled tasks using **Spring Scheduler** to trigger email alerts daily based on due dates.
- Developed reusable utility classes for email formatting and token handling to support future extensibility.
- Wrote unit and integration tests using **JUnit** to validate service logic and ensure system reliability.
- Participated in **Agile sprints**, collaborated with frontend developers and university staff to align backend features with functional requirements.

Environment: Java8, Spring Boot, Spring MVC REST, Hibernate, Junit, GitHub, Spring Initializer, Maven, Apache Tomcat.

Education

KATHMANDU UNIVERSITY, DHULIKHEL, KAVRE

Bachelors in Computational Mathematics - 2022
