

Sahera Tanveer Shaik

Data Analyst

sahera@techcareemail.com | (251) 373-9683 | USA | [LinkedIn](#)

Summary

Data Analyst with 4 years of experience in data extraction, transformation, and visualization using SQL, Python, Power BI, and Tableau. Proficient in statistical analysis, data modeling, and automating reporting processes to support data-driven decision-making. Skilled in analyzing large datasets across cloud platforms like AWS and Azure. Adept at uncovering trends, patterns, and actionable insights using advanced analytical techniques. Strong communicator and problem-solver, thriving in fast-paced, cross-functional, and Agile-driven environments.

Technical Skills

- Data Analysis & Statistical Methods:** Cohort Analysis, Trend Analysis, Time Series Decomposition & Forecasting, Pre/Post Analysis, Hypothesis Testing (Wilcoxon Signed-Rank Test), Statistical Aggregation, Variance Analysis, A/B Testing Basics, Root Cause Analysis
- Programming & Scripting:** Python (Pandas, NumPy, SciPy), R, SQL (Window Functions: ROW_NUMBER, PARTITION BY)
- Data Engineering & ETL Tools:** AWS Glue, AWS Lambda, AWS Athena (JSON, Parquet), Azure Data Factory, Azure Data Lake
- Data Visualization & Reporting:** Power BI (DAX, KPIs, drill-through reports, slicers), Tableau (LOD Expressions, dynamic filters, segmentation), Excel (Pivot Tables, Dashboards)
- Automation & Optimization:** Report Automation (Python), Query Optimization (Indexing, Partitioning), Data Validation & Cleansing (Outlier Detection, Cleansing Logic), Workflow Monitoring (Error Handling, Alerting)
- Tools & Platforms:** Git, Jupyter Notebook, Jira, Confluence, PowerPoint
- Other Skills:** Problem Solving, Critical Thinking, Cross-functional Collaboration, Data Storytelling, Attention to Detail, Time Management, Adaptability

Professional Experience

- Data Analyst, McKinsey & Company**

10/2024 – Present | Remote, USA

 - Collaborated with clinical, actuarial, and IT teams in Agile sessions to analyze healthcare claims data, identify trends, anomalies, cost drivers, and develop insightful management dashboards for reporting and decision-making.
 - Used SQL with advanced window functions like ROW_NUMBER and PARTITION BY to query claims data from AWS Athena in JSON and Parquet formats and built automated ETL pipelines using AWS Glue.
 - Conducted cohort and trend analysis to evaluate claim denial rates, processing times, and average claim size identifying a 12% reduction in denial rates over 6 months and a 15% improvement in claim processing efficiency.
 - Employed Python libraries including Pandas, NumPy, and SciPy for statistical analysis and time series decomposition to uncover seasonal claim patterns and variance enhancing operational decision-making without involving predictive modeling.
 - Executed rigorous data validation and cleansing using AWS Glue and AWS Lambda functions improving data quality by 20 percent and ensured ETL workflows maintained 99.8 percent uptime with automated error handling and alerting.
 - Developed interactive Power BI dashboards with slicers, drill-through reports, and dynamic KPIs Created DAX measures to track monthly cost trends and denial rate changes Automating reports for claims managers and executives.
- Data Analyst, Uber (India)**

01/2021 – 06/2023 | Remote, India

 - Collected and structured data for the Driver Incentive Effectiveness Analysis & Dashboard project, collaborated with Ops, Finance, and Product teams in Agile sprints to define KPIs and quantify ROI across weekly, seasonal, and surge-based incentives.
 - Designed optimized SQL queries and ETL pipelines using Azure Data Factory, extracting data from incentive logs, trip tables, and payout history. Improved query runtime by 40% through indexing and partitioning on tables containing many records.
 - Conducted Cohort Analysis and Pre/Post Analysis to assess incentive impact. Identified a 23% increase in weekly trip volume among tenured drivers and 31% higher retention in cities with tiered surge incentives.
 - Used Python (Pandas, NumPy) for data wrangling and statistical aggregation. Automated daily reports calculating trip volume uplift vs. incentive cost, reducing manual effort by 60% and increasing update frequency from weekly to daily.
 - Applied R's Wilcoxon Signed-Rank Test to compare driver earnings distributions pre- and post-incentives. Results showed statistically significant uplift ($p < 0.05$) in driver income during festive campaigns in major cities in India.
 - Directed data validation and cleansing using Azure Data Factory and Azure Data Lake. Implemented automated outlier detection logic for identifying incentive overpayments, reducing error rates by 18% in final reporting layers.
 - Built dynamic Tableau dashboards with Level of Detail (LOD) expressions to show trip volume uplift vs. incentive spend. Enabled segmentation by driver tier and region. Integrated time-series reporting and dynamic filters by incentive type and date.

Jr. Analyst, Uber (India)

- Assisted in the Driver Performance Monitoring & Reporting project by extracting and cleaning driver activity data using SQL and Excel under senior analysts' guidance to prepare accurate datasets tracking online hours, trip completions, and cancellations.
- Supported the automation of routine performance reports using Python (Pandas) which reduced manual work by 30 percent and helped deliver timely insights to operations teams for monitoring driver productivity and identifying improvement areas.
- Created and updated Tableau dashboards showing driver metrics with basic filters to visualize performance trends. Collaborated with senior analysts to prepare presentations for the operations team and helped improve incentive strategies.

10/2019 – 12/2020 | Remote, India

Education

Auburn University at Montgomery — Alabama, USA

Master of Science in Information Systems

MVSR Engineering College — Telangana, India

Bachelor of Engineering in Electrical and Electronics Engineering

01/2024 – 05/2025

MVSR Engineering College — Telangana, India

Bachelor of Engineering in Electrical and Electronics Engineering

07/2018 – 07/2021

Projects

Customer Churn Prediction Analysis for E-commerce Platform

- Conducted exploratory data analysis using Python (Pandas, Seaborn) on customer activity, identifying key churn indicators including session frequency, average cart size, and delayed shipping, improving segmentation strategies and retention efforts.
- Built a logistic regression model and evaluated performance using ROC-AUC and precision-recall metrics, enabling stakeholders to proactively target high-risk users with personalized offers, increasing retention by an estimated 18%.

Energy Consumption Trend Dashboard for Smart Homes

- Collected and analyzed time series data from IoT smart meters using AWS Athena and Python, identifying seasonal consumption patterns, peak usage hours, and anomalies across regions to support energy-saving recommendations.
- Designed an interactive Power BI dashboard with trend lines, region-based filters, and dynamic KPIs, empowering energy providers and homeowners to monitor usage in real-time and implement cost-effective consumption strategies.

Certificates

Microsoft Certified: Power BI Data Analyst Associate

Power Electronics & Renewable Energy using MATLAB and IoT

AutoCAD Electrical Fundamentals

Power System Basics
