Education

Indus Institute of Technology, Ahmedabad, IN

(Aug 2021 - May 2025)

B.Tech in Computer Engineering

G.P.A.: **3.53/4.0**

Relevant Coursework: Data Science, Object Oriented Programming, Operating Systems, Database Systems, Cybersecurity, Web Technology, Mobile Development, Cloud Computing, DSA, Computer Networks.

Skills

Languages and Frameworks: Python, C/C++, Java, Javascript, HTML/CSS

Core Technologies and AI: GenAI, Agentic AI, Prompt Engineering, Firewalls, Networking, SVM, Machine Learning, Data Science, Algorithms

Development Tools: Google Colab, Django Administrator, VScode, PyCharm, MySQL, Github, CrowdStrike Falcon, Android Studio, ChatGPT, Claude AI, AWS Aurora MySQL

Experience

Cyber Security Intern, Chintech Systems-Ahmedabad, IN

(Dec 2024 - May 2025)

- Fortified organizational cybersecurity defenses by orchestrating the deployment of **CrowdStrike Falcon** across **150 endpoints**, leading to a **70%** reduction in identified malware threats
- Configured, managed, and analyzed network security infrastructure using Fortinet, PaloAlto and Sonicwall firewalls to safeguard systems, enforce security policies, and ensure robust protection against cyber threats
- Gained Fortinet certifications to validate expertise in network security and firewall management

Web-App Development Intern, Macros Management Consultants- Ahmedabad, IN

(Jun 2024 - Jul 2024)

- Developed a responsive web application using core frontend technologies including HTML and CSS
- Implemented backend database management and operations in the web-app using MySQL
- Utilized and learned JavaScript to add interactivity and enhance user experience in web applications

Projects

Network and Information Security using NGAV, Chintech Systems-Ahmedabad, IN

(April 2025)

- Implemented a Network and Information Security solution using CrowdStrike Falcon NGAV to secure digital assets with real-time threat detection and automated response at an esteemed educational institute in India
- Conducted EDR (Endpoint Detection and Response) and EPP (Endpoint Protection) across over **120 endpoints**
- Automated anomaly detection and enhanced endpoint security across multiple campuses, strengthening the institutes' overall cybersecurity posture

StudyBud, Indus Institute of Technology-Ahmedabad, IN

[\(Github\)](#)

- Created a comprehensive web application providing an engaging, user-friendly chat and discussion platform for small groups and educational communities
- Devised real-time chat room functionality with CRUD operations, responsive design and intuitive UI using Python, Django, HTML, CSS, and SQLite which reduced page load time by approximately **~30%** through optimized database queries
- Collaborated in a team leading 3 developers to deliver a lightweight solution addressing the need for simple, cost-effective, and hassle-free online communication

Email Spam Detection

[\(Github\)](#)

- Conducted a CyberSecurity project for email spam detection using Jupyter, Python and Data Science techniques
- Preprocessed and cleaned a large email dataset with over **5000 data points/lines** to prepare high-quality training data for spam detection models
- Engineered features to extract spam-related patterns and tested multiple machine learning algorithms, including decision trees and support vector machines (SVMs)
- Evaluated models using key metrics (accuracy, precision, recall, F1-score) and optimized hyperparameters to maximize detection accuracy at **98.49%** making it highly effective for spam detection

Certifications:

- Prompt Engineering for ChatGPT - Great Learning
- AWS Aurora MySQL Basics- AWS
- Fortinet Certified Fundamentals in Cybersecurity - Fortinet
- Fortinet Certified Associate- FortiGate 7.4 Operator - Fortinet
- Python Programming - Axisray
- Complete Javascript Course - Udemy
