

SAHIL RAORANE

Chicago, IL | (773) 842-8295 | sahilraorane12@gmail.com | [LinkedIn](#)

Summary

Data Analyst with around 3 years of hands-on experience in analytics engineering, ETL/ELT, and predictive modeling across transportation, logistics, and consulting. Proficient in Python, R, SQL, and BI tooling; built automated pipelines on AWS/Azure, delivered KPI dashboards, and applied forecasting, anomaly detection, and statistical analysis to drive decisions. Strong stakeholder management, BRD/FRD documentation, and SDLC discipline; 4.0 GPA and multiple analytics certifications. Skilled in translating complex data into actionable business insights, optimizing processes to improve efficiency, and collaborating with cross-functional teams to deliver high-impact solutions. Adept at data governance, quality frameworks, and cloud-based data warehousing, with a proven track record of improving decision-making and driving measurable business outcomes..

Technical Skills

Programming:	Python (Pandas, NumPy, FastAPI, SQLAlchemy), R, SQL, T-SQL, Bash
ML/Stats:	Scikit-learn, TensorFlow, Predictive Modeling, Data Mining, Regression, Forecasting, Clustering, Anomaly Detection, Statistical Analysis, A/B Testing
Visualization:	Power BI (DAX), Tableau, Excel (Power Query, PivotTables, VLOOKUP, Macros), Data Storytelling
Data Engineering:	dbt, Apache Airflow, Hadoop, Spark, Hive, Alteryx, Jupyter Notebook
Databases	PostgreSQL, MySQL, Snowflake, MongoDB, Cosmos DB, NoSQL
Cloud & Analytics:	S3, Redshift, Athena, Glue, Lambda, Azure Data Factory, Azure Databricks, Azure Synapse
Data Management:	Data Cleaning, Data Quality Frameworks, Data Governance, Data Standardization, Data Validation, Data Modeling, Data Warehousing
Process & Collaboration:	SDLC, Agile (Scrum), Waterfall, HIPAA Compliance, GAAP Compliance, Git, GitHub, JIRA, Confluence, MS Project, SharePoint, Asana, Slack, CI/CD, Terraform

Experience

Business Analyst | McKinsey & Company | IL, USA | June 2025 – Present

- Created BRDs/FRDs, process maps, and acceptance criteria to de-risk scope and align stakeholders, cutting rework by 25%.
- Built Power BI dashboards with KPI definitions for throughput, cycle time, and SLA adherence; improved milestone on-time delivery by 18%.
- Led QA test plans, execution, and defect triage in JIRA, accelerated issue resolution by 30% via clear test cases and data validation.
- Facilitated Agile ceremonies; maintained Confluence spaces, SharePoint artifacts, and MS Project timelines for cross-team visibility.
- Stack: SQL and T-SQL (complex joins, views) for requirements validation; Power BI (DAX for measures) and Excel (Power Query, PivotTables, VLOOKUP, Macros) for reporting; JIRA/Confluence/SharePoint/MS Project for SDLC governance; Data Governance and Data Quality Frameworks for control design; Asana/Slack for team coordination; HIPAA/PII considerations in documentation.
- Skills: Data Modeling (star schemas for metrics), Data Standardization (source-to-target mapping), Data Validation (UAT scripts), A/B Testing (feature impact checks), Git/GitHub (versioning), Bash (batch utilities).

Data Analyst Intern (Software) | UBER | IL, USA | Oct 2024 – Dec 2024

- Automated 15+ SQL ETL pipelines to monitor trip volume, rider churn, and driver utilization; reduced dashboard latency and manual refreshes by 90%.
- Owned 20+ KPIs for fleet efficiency, surge pricing, and rider experience; delivered Tableau/Power BI views for compliance reviews and QBRs.
- Built Python anomaly detection (scikit-learn) for routing and delivery delays; identified disruptions 30% faster.
- Produced monthly analytics via Python EDA and SQL on geospatial and performance trends; shared Jupyter notebooks and Slack digests.
- Stack: AWS S3/Redshift/Athena/Glue/Lambda for ELT orchestration; Snowflake for warehousing; SQL/T-SQL for transformations; Python (Pandas, NumPy, Matplotlib, Seaborn) for EDA; Tableau and Power BI (DAX) for dashboards; Git/GitHub and JIRA for CI/CD and issue tracking.
- Skills: Apache Airflow (job scheduling), dbt (model lineage and tests), Spark/Hive (large-scale joins), Bash (CLI automation), Data Validation (assertions), Anomaly Detection (stat thresholds), Forecasting (demand projections).

Data Analyst | Adani | India | Oct 2021 – June 2023

- Engineered ETL to process 1.2M+ financial/logistics records; improved refresh cadence and enabled near-real-time reporting.
- Built 12+ Tableau dashboards for KPI and compliance; accelerated executive decision cycles with drilldowns.
- Developed forecasting models in Python (scikit-learn) for resource utilization; reduced budget variance and improved planning accuracy.
- Automated monthly reporting via Power BI and Excel macros; saved 15+ hours/month; implemented data validation to raise trust.
- Performed EDA and significance tests (SciPy/NumPy) to uncover process bottlenecks; improved on-time delivery.
- Stack: SQL on PostgreSQL/MySQL and Snowflake for ELT; Power BI/Tableau for BI; Excel (Power Query, PivotTables, VLOOKUP, Macros) for operational reporting; dbt for modular transformations; Alteryx for rapid data prep; Data Quality Frameworks and GAAP Compliance for controls.
- Skills: Data Modeling (dimensional schemas), Data Standardization (code mappings), Data Governance (data ownership), Regression and Clustering (driver KPIs), Git/GitHub (versioning), Bash (job runners).
- Collaborated with cross-functional teams to align data insights with business needs, ensuring analytics directly supported strategic decision-making.
- Streamlined data processes to boost efficiency and deliver timely insights for business stakeholders.

Projects

Portfolio Forecasting Tool | Python, REST API, Excel Modeling

- Engineered features from historical OHLCV; trained ARIMA/LSTM; backtested and selected champion model; visualized with Matplotlib/Seaborn; exposed inference via API and Excel.
- Stack: Python (Pandas, NumPy, scikit-learn, TensorFlow) for modeling; FastAPI for REST endpoints; SQLAlchemy for data access; Jupyter Notebook for experimentation; Git/GitHub for versioning; Forecasting and Regression for time series; Anomaly Detection for drift alerts.
- Skills: Data Cleaning (outliers/holidays), Data Standardization (scaling/encoding), Data Validation (train/test leakage checks), CI/CD (model packaging), Bash (deployment scripts).

Chicago Crime Data Analysis | Python, Power BI, R, ETL

- Built citywide dashboard over 100K+ records; identified hotspots and optimized resource allocation; cut manual reporting by 40%.
- Stack: SQL for extraction; Python (Pandas) and R for geospatial/temporal analysis; Power BI (DAX) for KPI rollups; dbt for transformations and tests; Data Governance for definitions; Spark for scalable joins when needed.
- Skills: Data Modeling (fact events, dim locations), Data Cleaning (dedupe/imputation), Data Standardization (date/time zones), Statistical Analysis (seasonality), A/B Testing (policy impact).

LinkedIn Data Mart Development | SQL, Power BI, Proxycurl API

- Designed SQL-based data mart for marketing analytics; improved refresh reliability and reporting accuracy.
- Stack: Proxycurl API for ingestion; SQL on Snowflake/PostgreSQL; Power BI for dashboards; MongoDB/Cosmos DB (NoSQL) for semi-structured profile storage; Airflow for scheduling; Data Validation (schema checks).
- Skills: Data Warehousing (star/snowflake schemas), Data Quality Frameworks (profiling), Data Governance (data dictionary), Bash (API batch jobs).

Education

• Illinois Institute of Technology | Chicago, IL | Aug 2023 – May 2025

MAS, Information Technology and Management Information Systems | GPA: 4.0

• University of Mumbai | Mumbai, India | July 2019 – April 2022

Bachelor of Science in Computer | GPA: 3.81

Certifications

- IBM Python Project for Data Science – Statistical modeling and predictive analytics with Python
- Data Visualization and Dashboards (Excel & Cognos) – Advanced visualization and dashboarding
- Python for Data Science, AI & Development – Python for AI/ML development
