SUMMARY

Detail-oriented Software Developer with expertise in cloud architecture, web development, testing, and data analytics. Skilled in designing scalable applications and improving system performance to drive business growth.

EDUCATION

Master's in Information Technology

Arizona State University

August 2022 – May 2024

3.88 GPA

Coursework: Cloud Architecture Info Tech, Analysing Big Data, Data Vis & Reporting for IT, TCP/IP Routing, Data in the Cloud Info Tech, Advanced Big data Analytics/AI

Bachelor's in Electrical and Electronics Engineering

VNR Vignana Jyothi Institute of Engineering and Technology

August 2015 – May 2019

7.45 CGPA

Coursework: Data Structures and Algorithms, Cybersecurity, Machine learning, Python

EXPERIENCE

Devrok Technologies LLC, USA

May 2025 – Present

Software Engineer

- Designed and optimized scalable software systems, increasing application performance by 35% and reducing load time by 40%.
- Developed and tested features, achieving 95% defect-free releases and improving user satisfaction by 25%.
- Maintained system documentation and enforced IT standards, enhancing code quality and boosting team efficiency by 30%.

Arizona State University, USA

July 2024 – May 2025

Software Developer

- Developed a fully responsive multi-page website, increasing mobile traffic by 30% and boosting user engagement by 20%.
- Built backend functionalities and intelligent form autofill feature, integrating APIs to enhance interactivity and reduce user input time.
- Deployed the application on AWS (EC2, S3) and collaborated with cross-functional teams to implement design changes, reducing errors by 30%.

Aureo Life Sciences, India

October 2021 - July 2022

Software Developer

- Led web development using Java, driving a 50% increase in website traffic and improved overall performance.
- Optimized SQL databases, improving data retrieval by 30% and implemented ETL strategies to increase data accuracy by 25%.
- Configured and managed Linux-based network services (DNS, DHCP, SSH), enhancing reliability by 30%.
- Deployed scalable application using Azure services, cutting operational costs by 20% and improving uptime with load balancing.
- Contributed to all SDLC phases, utilized Scrum methodologies to streamline workflows and improve team collaboration.

Mphasis Private Limited, India

June 2019 – October 2021

Associate Software Engineer

- Developed RESTful micro-services using Node.js and JavaScript, improving API response times by 30% and supporting a 50% increase in concurrent sessions.
- Built a multi-factor authentication system and implemented secure API authorization, reducing unauthorised access by 60%.
- Leveraged AWS services (EC2, S3, Lambda) to deploy scalable, high-availability applications with improved uptime.
- Automated CI/CD pipelines using Jenkins, cutting deployment time by 40% and accelerating delivery cycles.
- Wrote automated tests with Python and Selenium, reducing manual testing effort by 40% and increasing efficiency.
- Led code reviews and implemented unit and Cucumber tests, improving code quality and reducing bugs by 25%.
- Collaborated in Agile teams, contributing to sprint planning, daily standups, and mentoring junior engineers, which improved delivery speed and team productivity.

PROJECTS

Server-less cafe website

January 2024 - May 2024

- Developed and deployed a serverless architecture using AWS Lambda, EC2, and RDS, ensuring scalable backend functionality and reducing infrastructure management overhead.
- Optimized performance with AWS CloudFront and S3 for frontend hosting, achieving a 50% reduction in page load time and improving overall user experience.

Collaborative Destination Discovery Platform

August 2022 - December 2022

- Designed a vacation planning solution with React and React hooks, increasing user engagement by 30%. Managed a cloud-based location data system for real-time updates.
- Applied machine learning and NLP algorithms (Python, NLTK, BERT) to boost recommendation accuracy by 40% and further enhance user satisfaction by 25%.

TECHNICAL SKILLS

Languages: C/C++, Java, Python, HTML, CSS, JavaScript, TypeScript, .NET

Databases/Cloud: MySQL, NoSQL, MongoDB, AWS, Azure, GCP

Frameworks: Node.js, Angular, React.js, PyTorch, TensorFlow, Spring Boot

Platforms/Tools: Docker, Kubernetes, Jenkins, Git, Selenium, Junit, VS Code, Jira, ServiceNow, Tableau, PowerBI, WordPress, Oracle
