

# Sahithi Venna

Dallas, TX | ✉ [vennasahithi9@gmail.com](mailto:vennasahithi9@gmail.com) | ☎ 1 (214) 784-4785

🎓 Udemy | in Sahithi Venna

## Professional Summary:

- Results-driven Software Developer with 4+ years of experience in full-stack development, cloud technologies and data management. Currently contributing to Paycom's Time & Attendance module, with hands-on expertise in building and customizing enterprise-grade web and mobile applications using **React, Redux, JavaScript/TypeScript, CSS3, HTML5, PHP** and **SQL**.
- Proficient in **Python, Spark, ETL and Big Data workflows** with practical experience in **AWS services (Lambda, S3, EKS, DynamoDB, Glue, IoT Core, SNS, and SQS)**.
- Strong background in collaborating with customers to identify needs, gather and analyze requirements, document specifications, maintain clear communication throughout the development cycle, manage expectations, resolve issues, and deliver timely project updates.
- Excellent communication, interpersonal, and quick learning skills, with a proven ability to adapt seamlessly to diverse project environments.
- Worked with **Docker** to build and manage images, containers, and Docker Registry. Skilled in deploying, managing, and securing applications on **Kubernetes**, with experience in cluster operations, workload scheduling, and RBAC configuration.

## Technical Skills:

|                             |                                                                                                                                                                                                                   |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Programming Languages       | PHP, Python, C, Embedded C                                                                                                                                                                                        |
| Web & Frontend Technologies | React, Redux, JavaScript, CSS3, HTML5, Accessibility Standards (WCAG)                                                                                                                                             |
| Development Principles      | Object-Oriented Programming, Data Structures & Algorithms, SDLC, Model-View-Controller (MVC) Architecture                                                                                                         |
| Databases & Big Data        | MySQL, Oracle DB, PL/SQL, Amazon S3, DynamoDB, Data Warehousing, ETL Processes (Talend, Pentaho), Apache Spark, Hadoop                                                                                            |
| Cloud Platforms             | <b>AWS:</b> IoT Core, Lambda, S3, SNS, SQS, QuickSight, EKS, CloudWatch Events, DynamoDB, Kinesis Firehose, Glue, Athena, Elasticsearch, Kibana<br><b>Azure:</b> Data Factory (ADF), Power BI, Azure SQL Database |
| Web & Backend Services      | RESTful APIs, Node.js, JSON, AJAX                                                                                                                                                                                 |
| DevOps & Automation Tools   | GitHub, GitLab, Control-M                                                                                                                                                                                         |
| AI & Machine Learning       | CUDA, Transformers, Neural Networks (ANN, CNN, RNN), Language Models, Facial Recognition (DeepFace, FaceNet)                                                                                                      |
| Operating Systems           | Linux/Unix, Windows (all versions), macOS                                                                                                                                                                         |
| Other Skills                | Agile/Scrum methodologies, Xdebug, Data Visualization, Real-Time Data Processing, Usability Testing, Application Security, CI/CD                                                                                  |
| Certification               | Microsoft Certified: Azure Fundamentals, Microsoft Certified: Azure Developer Associate                                                                                                                           |

## **Professional Experiences:**

Client – Paycom

Role – Software Developer III

*Dallas, TX*

*Feb 2025 – Sept 2025*

### **Responsibilities:**

- Improved **punch visibility** in the Time & Attendance module by introducing **color-coded indicators** (valid vs. missing punches) using **CSS** and **PHP**, reducing user errors by **30%** and enhancing UI clarity.
- Ensured compliance with accessibility principles (**WCAG**) when designing UI changes, providing an inclusive experience for users with visual impairments.
- Designed and implemented a **centralized configuration system** for Labor Allocation Timecard Display service with **PHP** and **SQL**, creating a reusable service layer that ensured consistent formatting across multiple modules.
- Refactored and extended the **Proactive Lunch & Break Reminders** feature using PHP and React, resolving **10+ critical edge cases** and improving reminder accuracy and compliance with scheduling policies.
- Redesigned the punch change request (**PCR**) workflow in a legacy system to required employee approval before manager edits and approves the PCR. Architected the underlying database structure and user permissions to manage the flow by using **MVC** principles with **SQL, Redux, React, HTML and PHP**. Delivered UI updates by modernizing the punch change request page into a cleaner, more intuitive format.
- Developed and integrated **RESTful APIs** to connect frontend React/Redux applications with backend PHP services, ensuring reliable data exchange through JSON and improving overall system performance and maintainability.
- Enhanced **system stability** by debugging and modernizing a large legacy codebase (PHP, JavaScript/Typescript, CSS, HTML, React), increasing data accuracy and reducing support tickets from end users.
- Utilized **Xdebug** to debug and profile complex PHP applications, improving issue resolution speed and ensuring cleaner, more efficient code across legacy and modern modules.
- Ensured all new pages and **UI** elements I developed were fully translatable and accessible, following localization best practices and accessibility standards, so users across different languages and abilities had consistent experience.
- Partnered with product managers and designers to build **intuitive, user-friendly interfaces**, improving adoption and usability across time-tracking features.
- Authored backend process documentation and **standardized coding practices**, improving maintainability and accelerating onboarding for new developers.
- Streamlined **CI/CD workflows** by improving Git and Maven usage, reducing integration conflicts and deployment errors.
- Completed internal training on Secure Coding Practices (preventing SQL injection, XSS, and other OWASP top 10 vulnerabilities), Node.js fundamentals (API development and asynchronous programming concepts) and GitLab/Maven.
- Worked on **Dockers** to create and manage images, containers and Docker Registry. Hands on creating docker snapshot and virtual instances with Docker. Also, expertise on virtualization and containers (Docker) and having working knowledge on Kubernetes.

**Environments:** PHP, React, HTML5, CSS, MVC, JavaScript/TypeScript, JSON, Redux, Xdebug, SQL, RESTful APIs, Accessibility, Translations, Splunk, HUE, Maven, Docker, GitLab.

Client – HSBC  
Role – Senior Software Engineer

*Hyderabad, India*  
*July 2020 – Dec 2022*

**Responsibilities:**

- Built pipelines converting multi-source data (SAS, FTPS, Teradata) to ORC for the UK HSBC client, enhancing processing efficiency and ensuring compliance with industry standards using **Python, Spark and Shell Scripting**.
- Designed and executed complex business logic and data transformation workflows using **HQL**, ensuring data integrity, auditing, and regulatory alignment. Leveraged **Pentaho** for orchestration and effectively resolved critical database issues while managing client support tickets to maintain operational continuity.
- Optimized performance by tuning Spark jobs, reducing execution time and resource utilization. Automated job scheduling, monitoring, and regression testing through **Control-M**, ensuring consistent, reliable, and cost-efficient data operations.
- Developed end-to-end data visualization solutions by integrating **Power BI** with **Azure Data Factory (ADF)**. Streamlined supply quality management by transforming data from Excel into **Azure SQL Database** with change tracking enabled, enabling real-time monitoring of data updates and accuracy.
- Designed, built, and published interactive dashboards and reports in Power BI to provide actionable insights, improving decision-making for stakeholders across business functions.
- Partnered with cross-functional teams on website modernization projects, enhancing digital presence, streamlining content delivery pipelines, and driving brand visibility through improved user experiences.
- Implemented data governance practices, including validation frameworks and error-handling mechanisms, to ensure high-quality data pipelines and minimize downstream issues.
- Contributed to knowledge-sharing initiatives by documenting workflows, creating technical runbooks, and mentoring junior team members on **Spark** optimization, **Pentaho** usage, and **Power BI** reporting best practices.
- Collaborated with infrastructure teams to fine-tune data pipelines for high availability and resilience, while adhering to strict client SLAs and compliance requirements in the banking domain.

**Environments:** Python, Spark, Hadoop, HQL, Shell Scripting, SQL, Control-M, Pentaho, Power BI, Azure Data Factory, Azure SQL Database, SLAs

Client – Makerdemy  
Role – IOT Engineer

*Chennai, India*  
*May 2019 – Oct 2019*

**Responsibilities:**

- Authored and published a comprehensive hands-on course, **“Introduction to AWS IoT”**, on Udemy, designed to teach foundational and advanced concepts of AWS IoT through real-world projects, guided tutorials, and step-by-step labs. The course has helped learners gain practical expertise in building IoT solutions on **AWS**.
- Designed and implemented an ESP32-based IoT system with RESTful APIs in **AWS Lambda** that seamlessly integrated with **AWS IoT Core**, enabling real-time data ingestion.
- Configured alerts using **Amazon SNS** for instant notifications and orchestrated automated responses through AWS Lambda functions.
- Developed an end-to-end IoT data pipeline by streaming sensor data via **Kinesis Firehose** into **Amazon S3**, ensuring secure, scalable, and low-latency delivery.
- Leveraged **AWS Glue** to clean, transform, and convert raw JSON data into Apache Parquet format, optimizing storage efficiency and enabling faster analytical queries.
- Queried curated datasets using Amazon Athena, extracting actionable insights and validating IoT data integrity.
- Manage and troubleshoot AWS EKS infrastructure to ensure high availability, scalability, and performance.

- Configure **nodeSelectors**, **taints/tolerations**, and **pod affinity/anti-affinity rules** to optimize workload placement and resource utilization across nodes.
- Administer Kubernetes RBAC by creating and managing **ClusterRoles**, **Roles**, and **RoleBindings**, ensuring least-privilege access control.
- Configure and maintain **service accounts** and **service principals** to enable secure workload authentication and authorization with AWS and external services.
- Built interactive, data-driven dashboards in **Amazon QuickSight** to visualize patterns and trends, empowering stakeholders with meaningful analytics and real-time monitoring capabilities.
- Incorporated best practices in IoT solution architecture, including device provisioning, secure **MQTT** communication, **IAM-based access control**, and cost-optimized storage and analytics strategies.
- Emphasized scalability and extensibility within the course design, demonstrating how the same architecture can be adapted for use cases such as smart homes, predictive maintenance, and industrial IoT applications.

**Environments:** AWS, IoT Core, CloudWatch Events, Dynamo DB, EC2, EKS, Lambda, RESTful APIs, S3, SNS, SQS, AWS Glue, Kinesis Firehose, Kibana, Elasticsearch, QuickSight, Athena, Python, Embedded C, MQTT.

### **Leadership Experience:**

|                                                                             |             |
|-----------------------------------------------------------------------------|-------------|
| <b>Placement Coordinator</b><br>Placement Cell, IIITDM Kancheepuram         | 2018 - 2020 |
| <b>Mentor</b><br>Undergraduate Mentor – Mentee Program, IIITDM Kancheepuram | 2019 - 2020 |
| <b>Student Representative</b><br>ECE Department, IIITDM Kancheepuram        | 2017 - 2020 |

### **Awards:**

|                                                                                             |                                    |
|---------------------------------------------------------------------------------------------|------------------------------------|
| <b>Best Employee Award</b><br><i>Issued by Venkatesh Varadachari, Director at Makerdemy</i> | <i>Chennai, India<br/>Oct 2019</i> |
|---------------------------------------------------------------------------------------------|------------------------------------|

### **Education:**

|                                                                                                                |                            |
|----------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>University Of North Texas</b><br><i>Masters in Computer Science<br/>GPA – 4.0/4.0</i>                       | <i>Aug 2023- Dec 2024</i>  |
| <b>IIITDM Kancheepuram</b><br><i>Bachelors in Electronics and Communication Engineering<br/>GPA – 3.48/4.0</i> | <i>Aug 2016 - May 2020</i> |
