🔗 Udemy | in Sahithi Venna

Professional Summary:

- Results-driven Software Developer with around 4 years of experience in full-stack development, cloud technologies and data management. Currently contributing to Paycom's Time & Attendance module, with hands-on expertise in building and customizing enterprise-grade web applications using **React, JavaScript, CSS** and **PHP**.
- Skilled in developing and deploying J2EE components to build scalable, distributed enterprise applications.
- Proficient in configuring and deploying web applications on WebLogic and WebSphere Application Servers, with hands-on experience in using Tomcat.
- Proficient in **Python, SQL, Spark, ETL and Big Data workflows** with practical experience in **AWS services (Lambda, S3, DynamoDB, Glue, IoT Core, SNS, and SQS)**.
- Strong background in collaborating with customers to identify needs, gather and analyze requirements, document specifications, maintain clear communication throughout the development cycle, manage expectations, resolve issues, and deliver timely project updates.
- Excellent communication, interpersonal, and quick learning skills, with a proven ability to adapt seamlessly to diverse project environments.

Technical Skills:

Programming Languages	PHP, Python, C, Embedded C
Web & Frontend Technologies	React, JavaScript, CSS, HTML, Accessibility Standards (WCAG)
Development Principles	Object-Oriented Programming, Data Structures & Algorithms, SDLC, Model-View-Controller (MVC) Architecture
Databases & Big Data	MySQL, Oracle DB, PL/SQL, Amazon S3, DynamoDB, Data Warehousing, ETL Processes (Talend, Pentaho), Apache Spark, Hadoop
Cloud Platforms	<i>AWS:</i> IoT Core, Lambda, S3, SNS, SQS, QuickSight, CloudWatch Events, DynamoDB, Kinesis Firehose, Glue, Athena, Elasticsearch, Kibana <i>Azure:</i> Data Factory (ADF), Power BI, Azure SQL Database
DevOps & Automation Tools	GitHub, GitLab, Control-M
AI & Machine Learning	CUDA, Transformers, Neural Networks (ANN, CNN, RNN), Language Models, Facial Recognition (DeepFace, FaceNet)
Operating Systems	Linux/Unix, Windows (all versions), macOS
Development Tools	PhpStorm, Visual Studio Code, Jupyter Notebook, Anypoint Studio, Eclipse
Other Skills	Shell Scripting, Data Visualization, Real-Time Data Processing, Usability Testing, Application Security

Professional Experiences:

Client – Paycom

Role – Software Developer III

Dallas, TX

Feb 2025 – Present

Responsibilities:

- Improved **punch visibility** in the Time & Attendance module by introducing **color-coded indicators** (valid vs. missing punches) using CSS and PHP, reducing user errors by **30%** and enhancing UI clarity.
- Ensured compliance with accessibility principles (WCAG) when designing UI changes, providing an inclusive experience for users with visual impairments.
- Designed and implemented a **centralized configuration system** for Labor Allocation Timecard Display with PHP and SQL, creating a reusable service layer that ensured consistent formatting across multiple modules.
- Refactored and extended the **Proactive Lunch & Break Reminders** feature using PHP and React, resolving **10+ critical edge cases** and improving reminder accuracy and compliance with scheduling policies.
- Redesigned the punch change request (PCR) workflow in a legacy system to required employee approval before manager edits and approves the PCR. Architected the underlying database structure and user permissions to manage the flow by using MVC principles with SQL, Redux, React, HTML and PHP. Delivered UI updates by modernizing the punch change request page into a cleaner, more intuitive format.
- Enhanced **system stability** by debugging and modernizing a large legacy codebase (PHP, JavaScript, CSS, HTML, React), increasing data accuracy and reducing support tickets from end users.
- Utilized Xdebug to debug and profile complex PHP applications, improving issue resolution speed and ensuring cleaner, more efficient code across legacy and modern modules.
- Ensured all new pages and UI elements I developed were fully translatable and accessible, following localization best practices and accessibility standards, so users across different languages and abilities had consistent experience.
- Partnered with product managers and designers to build **intuitive, user-friendly interfaces**, improving adoption and usability across time-tracking features.
- Authored backend process documentation and **standardized coding practices**, improving maintainability and accelerating onboarding for new developers.
- Streamlined **CI/CD workflows** by improving Git and Maven usage, reducing integration conflicts and deployment errors.

Environments: PHP, React, HTML5, CSS, MVC, JavaScript, JSON, JUnit, Hadoop, Redux, Xdebug, SQL, Accessibility, Translations, Splunk, HUE, Maven, GitLab.

Client – HSBC

Role – Senior Software Engineer

Hyderabad, India

July 2020 – Dec 2022

Responsibilities:

- Facilitated the conversion of incoming data from various sources (SAS, FTPS, Teradata) to ORC for the UK HSBC client, enhancing processing efficiency and ensuring compliance with industry standards using **Python, Spark and Shell Scripting**.
- Designed and executed complex business logic and data transformation workflows using **HQL**, ensuring data integrity, auditing, and regulatory alignment. Leveraged Pentaho for orchestration and effectively resolved critical database issues while managing client support tickets to maintain operational continuity.
- Optimized performance by tuning Spark jobs, reducing execution time and resource utilization. Automated job scheduling, monitoring, and regression testing through **Control-M**, ensuring consistent, reliable, and cost-efficient data operations.

- Developed end-to-end data visualization solutions by integrating **Power BI** with **Azure Data Factory (ADF)**. Streamlined supply quality management by transforming data from Excel into **Azure SQL Database** with change tracking enabled, enabling real-time monitoring of data updates and accuracy.
- Designed, built, and published interactive dashboards and reports in Power BI to provide actionable insights, improving decision-making for stakeholders across business functions.
- Partnered with cross-functional teams on website modernization projects, enhancing digital presence, streamlining content delivery pipelines, and driving brand visibility through improved user experiences.
- Implemented data governance practices, including validation frameworks and error-handling mechanisms, to ensure high-quality data pipelines and minimize downstream issues.
- Contributed to knowledge-sharing initiatives by documenting workflows, creating technical runbooks, and mentoring junior team members on **Spark** optimization, **Pentaho** usage, and **Power BI** reporting best practices.
- Collaborated with infrastructure teams to fine-tune data pipelines for high availability and resilience, while adhering to strict client SLAs and compliance requirements in the banking domain.

Environments: Python, Spark, Hadoop, Shell, SQL, Power BI, Azure Data Factory, Azure SQL Database

Client – Makerdemy

Role – IOT Engineer

Chennai, India

May 2019 – Oct 2019

Responsibilities:

- Authored and published a comprehensive hands-on course, “**Introduction to AWS IoT**”, on Udemy, designed to teach foundational and advanced concepts of AWS IoT through real-world projects, guided tutorials, and step-by-step labs. The course has helped learners gain practical expertise in building IoT solutions on **AWS**.
- Designed and implemented an ESP32-based temperature and humidity monitoring system that seamlessly integrated with **AWS IoT Core**, enabling real-time data ingestion. Configured alerts using **Amazon SNS** for instant notifications and orchestrated automated responses through **AWS Lambda** functions.
- Developed an end-to-end IoT data pipeline by streaming sensor data via **Kinesis Firehose** into **Amazon S3**, ensuring secure, scalable, and low-latency delivery.
- Leveraged **AWS Glue** to clean, transform, and convert raw JSON data into Apache Parquet format, optimizing storage efficiency and enabling faster analytical queries.
- Queried curated datasets using Amazon Athena, extracting actionable insights and validating IoT data integrity.
- Built interactive, data-driven dashboards in **Amazon QuickSight** to visualize patterns and trends, empowering stakeholders with meaningful analytics and real-time monitoring capabilities.
- Incorporated best practices in IoT solution architecture, including device provisioning, secure **MQTT** communication, **IAM-based access control**, and cost-optimized storage and analytics strategies.
- Emphasized scalability and extensibility within the course design, demonstrating how the same architecture can be adapted for use cases such as smart homes, predictive maintenance, and industrial IoT applications.

Environments: AWS, IoT Core, CloudWatch Events, Dynamo DB, EC2, Lambda, S3, SNS, SQS, AWS Glue, Kinesis Firehose, Kibana, Elasticsearch, QuickSight, Athena, Python, Embedded C.

Leadership Experience:

Placement Coordinator

Placement Cell, IIITDM Kancheepuram

2018 - 2020

Mentor

Undergraduate Mentor – Mentee Program, IIITDM Kancheepuram

2019 - 2020

Student Representative

ECE Department, IIITDM Kancheepuram

2017 - 2020

Awards:

Best Employee Award

Issued by Venkatesh Varadachari, Director at Makerdemy

Chennai, India

Oct 2019

Education:

University Of North Texas

Master's in Computer Science

GPA – 4.0/4.0

Aug 2023- Dec 2024

IIITDM Kancheepuram

Bachelor's in Electronics and Communication Engineering

GPA – 3.48/4.0

Aug 2016 - May 2020
