EDUCATION

Rutgers University

Bachelor of Science in Computer Science

Dean's List: 2022, 2023, 2024, 2025

New Brunswick, NJ

Sep. 2022 - May 2025

EXPERIENCE

Software Engineer Intern

Jun. 2024 – Sep. 2024

Criva Marketing

Plainsboro, NJ

- Automated data extraction using Python scripts that pulled daily marketing data from Google Analytics, scheduled to run automatically via cron jobs, **reducing manual data collection time by 50%**.
- Cleaned and stored data with Pandas for processing and saved it in a PostgreSQL database, improving the accuracy reducing errors in reporting.
- Developed a real-time marketing dashboard with Flask, displaying key metrics like CTR, impressions, and conversion rates, enabling teams to quickly assess campaign performance

Frontend Engineer Intern

Jun. 2023 – Aug. 2023

NRIVA

Plainsboro, NJ

- Optimized website performance by minifying CSS/JS files and implementing lazy loading, **reducing load times by 20%**.
- Collaborated with developers to debug API failures and fix broken UI components, improving website reliability.
- Implemented database indexing and caching for frequently accessed data, cutting query response times by 30%.
- Redesigned homepage and donation pages using React and Bootstrap, improving mobile responsiveness

PROJECTS

Advanced Credit Card Fraud Detection System | *PyTorch, SQLite, Flask, AI, ML*

- Developed a fraud detection system using a neural network to analyze **1 million+** lines of **highly imbalanced** financial transaction data, leveraging **SMOTE** and regularization to boost accuracy and robustness.
- Built a robust and scalable web platform using Flask for seamless user interaction, integrated with a SQLite database to ensure efficient data management and rapid query execution.
- Optimized the ML pipeline by applying advanced data preprocessing techniques, **hyperparameter tuning**, and cross-validation to handle the complexities of **imbalanced datasets**.

Full-Stack Airline Booking and Management System | *Java, MySQL, JDBC, Apache Tomcat*

- Deployed a **full-stack** travel booking platform with advanced flight search, reservation management, and **real-time** waitlist functionality.
- Implemented robust **role-based access control** for admins, customer reps, and users, enabling secure data management and operational oversight.
- Engineered a **normalized relational database** schema with **optimized queries** and enforced data integrity to support high-performance analytics and reporting.

NASA CMAPSS – Machine Learning Model | *TensorFlow, Pandas, Numpy, Python*

- Efficiently processed and scaled large datasets (**800,000+ lines, 15M+ data points**) using Pandas, NumPy, and MinMaxScaler to prepare data for **time-series analysis**.
- Built a custom **bidirectional LSTM model** with masking, dropout, and batch normalization layers to predict Remaining Useful Life (RUL) of engines, trained over 50 epochs.
- Employed **early stopping**, learning rate reduction, and model checkpointing to ensure the model generalized well, achieving a Mean Absolute Error of 0.03 on the test set.

CERTIFICATIONS/SKILLS

Certifications: AWS Cloud Practitioner

Technical Skills: Python, Java, SQL, JavaScript, C, R, PyTorch, Pandas, NumPy, React, RestAPI
