

SUMMARY

Detail-oriented and results-driven Data Analyst with hands-on experience in data analysis, visualization, and cloud-based analytics across industries. Proficient in SQL, Python (Pandas, NumPy), and BI tools like Power BI and Tableau, with exposure to building ML models for churn and fraud prediction using scikit-learn. Skilled in working with cloud platforms such as AWS and Snowflake and experienced in automating data pipelines using Apache Airflow. Strong foundation in statistical methods, predictive analytics, and stakeholder-facing dashboard development. Passionate about transforming complex data into clear insights that drive business decisions.

SKILLS

Data Analytics & Programming: SQL, Python (Pandas, NumPy), R, Excel (Pivot Tables, Macros)

Business Intelligence: Power BI, Tableau, Looker, KPI dashboards, data storytelling

Data Engineering & ETL: Data Wrangling, Apache Airflow, Python-based ETL, Data Transformation

Cloud & Databases: AWS (S3, Lambda, Redshift), Snowflake, MySQL, PostgreSQL, MongoDB, Cassandra

Statistical & ML Techniques: A/B Testing, Hypothesis Testing, Regression, Predictive Modeling, scikit-learn

EXPERIENCE

VMware | Data Analyst

July 2025 – Present

- Performed comprehensive data profiling on cloud-based operational datasets using SQL and Python (Pandas, Seaborn), identifying inconsistencies and outliers to improve reliability of product analytics pipelines.
- Designed and developed Tableau dashboards to visualize feature adoption, usage patterns, and customer engagement metrics for key cloud-native products.
- Improved Snowflake SQL query performance for scheduled reports by tuning joins and filters, reducing dashboard refresh time by 40% and optimizing cloud compute cost.
- Contributed to the validation and monitoring of ETL pipelines hosted on AWS, enabling accurate data feeds into internal ML models for churn prediction and usage forecasting.
- Maintained end-to-end documentation of data lineage, metric definitions, and architecture flow using Confluence, Lucid chart, and Jira, driving alignment across data, product, and engineering teams.

MoneyGram | Data Analyst Intern - AI & Cloud Focus

Apr 2024 – Aug 2024

- Built real-time dashboards using Tableau and Power BI to track client transaction trends, reducing decision time by 15% and supporting data-driven strategies.
- Used Python (Pandas, NumPy) and SQL for large-scale data wrangling and automation, cutting daily reporting time by 30% and enhancing data quality.
- Conducted exploratory data analysis (EDA) and contributed to fraud detection models using R and Python, helping identify high-risk patterns and reduce fraud by 15%.
- Collaborated with the data engineering team to support AWS Redshift integration, enabling faster query performance and more reliable cloud-based reporting.
- Delivered insights to cross-functional teams and business clients, improving customer engagement by 12% and shaping marketing strategies with predictive analytics.

Dell Technologies | Software Analyst

Jan 2022 – Aug 2023

- Delivered actionable business insights by analysing large datasets using SQL, Power BI, and Python, enabling leadership to monitor KPIs and optimize operational performance.
- Supported the development of predictive analytics models using Python and scikit-learn to improve customer retention and product demand forecasting across regions.
- Collaborated with the data engineering team to automate ETL workflows using Apache Airflow, enhancing data pipeline reliability and reducing manual processing time.
- Improved query performance for PostgreSQL and MySQL databases by contributing to index optimization and analyzing slow-running queries for key business reports.
- Contributed to the design and deployment of interactive dashboards for cross-functional teams, streamlining weekly reporting and enabling data-driven decision-making.

EDUCATION

Southeast Missouri State University, MS in Computer Science

Aug 2023 – May 2025

Coursework: Data Mining, Artificial Intelligence, Cloud Computing, RDBMS

JNTUH University, BTEC in Electrical Engineering

Aug 2019 – May 2023

Coursework: Object-Oriented Programming, C & Data Structure, Python

PROJECT

RetailOps 360 – End-to-End Scalable Analytics & ML Pipeline for Retail Intelligence

Built an end-to-end data analytics pipeline to process 3M+ grocery orders using Python, SQL, and cloud tools. Developed predictive models for churn and fraud detection with scikit-learn and visualized key insights using Power BI. Automated ETL workflows with Apache Airflow and stored data in AWS Redshift for scalable, cost-efficient reporting.

Customer Analytics Data Lake | SQL, dbt, Azure Synapse, Power BI | 2023

Built an end-to-end customer analytics pipeline by integrating raw CRM data into a Delta Lake architecture using SQL and dbt. Modeled data with star schemas and published curated datasets to Azure Synapse for BI consumption. Developed interactive Power BI dashboards to visualize customer trends and purchase behaviour, reducing manual reporting time by 60%.
