SUMMARY

Results-driven Data Analyst with 2+ years of experience in data analytics, dashboarding, and ETL pipeline development. Adept at building interactive Tableau dashboards, optimizing SQL queries, and automating reporting workflows to support organizational and healthcare-aligned decision-making. Proven ability to assess and improve legacy data systems, collaborate cross-functionally, and deliver high-quality, impactful data solutions. Strong foundation in Python, data modeling, and business intelligence tools. Passionate about leveraging data for social impact, operational efficiency, and healthcare improvement.

EDUCATION

University at Buffalo, Buffalo, NY

Master of Science in Computer Science

Aug 2023 – Dec 2024

GPA - 3.56

Coursework: Deep Learning, Machine Learning, Data Intensive Computing, PostgreSQL, Data Models and Query Langs, Computer Vision, Technology Entrepreneurship.

VIT University, Chennai, India

Bachelor of Technology in Electronics and Communication Engineering

Jul 2017 - Jun 2021

GPA - 3.25

Coursework: Data Structures and Algorithms, Object-Oriented Programming, Java, Business Analytics for Engineers.

TECHNICAL SKILLS

Programming Languages: Python, Java, VBA, Ruby on Rails | **Databases:** Oracle, PostgreSQL, MySQL, MongoDB

Frameworks & Platforms: PyTorch, TensorFlow, Scikit-learn, Jira | **Tools & Technologies:** SAP BODS, Machine Learning, Deep Learning, Computer Vision, Docker, ETL Development, Data Analysis, Git, Tableau, Power BI, Power Apps | **Concepts:** SDLC, Data Modeling, Agile, Kanban | **Scripting:** Shell Scripting

WORK EXPERIENCE

Infosys (Warner Music Group)

Aug 2021 - Aug 2023

Software Engineer

- Designed and deployed 30+ ETL pipelines using SAP BODS, increasing data processing efficiency by 40% for Warner Music Group's global finance platform.
- Enhanced system performance by optimizing 50+ SQL queries and automating recurring tasks using Unix and VBA.
- Extracted business-critical data from SAP ECC systems via ABAP flows, ensuring reliability for finance reporting.
- Monitored and optimized SAP BODS ETL performance, reducing job execution times by 30% and minimizing system downtime.
- Troubleshooted and resolved job failures in pre-production and production, reducing downtime by 15% and ensuring system continuity.
- Integrated advanced features into the user interface using Ruby on Rails, leveraging the MVC architecture to enhance maintainability and development efficiency, resulting in a 20% increase in user satisfaction scores.
- Collaborated with cross-functional teams for seamless backend and UI integration, boosting operational efficiency by 12%.

Smart Bridge Ltd.

May 2020 – Jun 2020

Software Engineer Intern

- Engineered a sentiment analysis project for Amazon Kindle Store reviews using AI, ML, and NLP techniques to extract meaningful insights from user-generated content.
- Designed data processing pipelines to extract meaningful insights, improving response time for product enhancements by 15%.
- Developed interactive dashboards for real-time data visualization and decision-making.

PROJECTS

CAPTCHA Generation Using Deep Learning Models

- Designed and implemented various CAPTCHA generation models (GANs, cGANs, and VAEs) to create secure and diverse CAPTCHA images, enhancing resistance to automated attacks.
- Implemented conditional input mechanisms using cGANs, generating customized CAPTCHA images tied to specific labels, improving customization by 15%.
- Assessed CAPTCHA quality using user decipherability rates and solver resistance metrics, achieving 98% human success rates while reducing image duplication by 20%.

Predictive Modeling for Motor Vehicle Collision Severity

- Built and optimized predictive models (Naive Bayes and Random Forest) using 1M+ collision records to classify collision severity and identify key risk factors.
- Achieved consistent model predictions across various cases, improving preventive strategies by 18%.
- Engineered features by mapping time and location variables, identifying patterns contributing to higher collision rates.
- Predicted primary contributing factors for collisions using Random Forest models, assisting in road safety improvements.
- Deployed an interactive web application with Streamlit for real-time collision severity prediction based on user inputs.

Clear Sight: A Combined Deblurring and Super-Resolution for Real-World Imagery

- Formulated deep learning models integrating GAN-based deblurring and CNN-based super-resolution to enhance the clarity of real-world blurry, low-resolution images.
- Constructed custom data pipelines by preparing paired image datasets, resizing, normalizing, and injecting noise to strengthen model training and generalization.
- Refined model architecture with VGG16-based perceptual loss and MSE loss functions, improving PSNR (22.55) and SSIM (0.79) metrics.
- Orchestrated an integrated sequential pipeline for image restoration, delivering a 30% clarity enhancement for surveillance applications.

Efficient Inventory Management System (EIMS)

- Architected a PostgreSQL-based inventory management system, enabling real-time inventory tracking across 10,000+ products and reducing manual data entry errors by 95%.
- Developed optimized SQL indexing strategies and query structures, decreasing average query execution time from 3.2s to 0.8s and improving overall data retrieval performance by 22%.
- Engineered an automated inventory replenishment system using PostgreSQL triggers that monitors stock levels and automatically generates purchase orders when inventory falls below threshold, reducing stockout incidents by 40%.
- Designed and deployed a Streamlit-based web interface integrated with the PostgreSQL backend, implementing paginated product views and real-time search functionality, resulting in a 65% improvement in inventory management efficiency for e-commerce operations.
