

Sai Kartheek Goli | Data Analyst

Chicago, IL | +1(872)-297-7985 | saikartheekgoli@gmail.com | [LinkedIn](#)

➤ Summary

Data Analyst with 4+ years of experience developing data solutions to improve business operations. Proficient in SQL, Python, Power BI, and Tableau for data analysis, reporting, and visualization. Experienced in creating data pipelines and transforming raw data into meaningful insights to support business decisions. Knowledgeable in cloud platforms (AWS, Azure) and big data technologies (Apache Spark, PySpark). Skilled in collaborating with teams to gather requirements, define key metrics, and implement improvements to increase operational efficiency. Dedicated to using data to address challenges and achieve tangible business results.

➤ Technical skills

Advanced Data Analysis & Reporting: SQL (complex queries, stored procedures, CTEs), Python (pandas, NumPy, matplotlib, Seaborn), R, Power BI, Tableau, Excel (advanced functions, VBA), Jupyter Notebook, Scikit-learn

Data Engineering & ETL Processes: Data Warehousing (Snowflake, PostgreSQL, AWS Redshift), ETL pipelines using Apache Airflow, AWS Glue, Data Integration, Data Cleansing and Transformation

Machine Learning & Automation: Regression Analysis, Predictive Analytics, Statistical Modeling, A/B Testing, Customer Segmentation, Power Automate, Scikit-learn

Cloud Platforms & Big Data Technologies: AWS (S3, EC2, RDS, Lambda), Azure (Data Factory, Databricks), Big Data Tools (Apache Spark, PySpark, Kafka), Azure Blob Storage

Business Intelligence & Analytics: End-to-End Reporting, KPI Dashboard Development, Trend Analysis, Real-time Reporting Systems, Market Basket Analysis

Version Control & Tools: Git, Bitbucket, Visual Studio, PyCharm

Statistical Modeling & Analysis: Hypothesis Testing, Regression Analysis, A/B Testing, Statistical Modeling

Automation & Scripting: SQL Optimization, Automation of Reports and Dashboards, Scripting for Data Aggregation, ETL processes

➤ Experience

Data Analyst Intern | UnitedHealth Group, USA

Dec 2024 – May 2025

- Extracted, cleaned, and validated patient claims and provider datasets using SQL and Python, reducing reporting lag by 40% across Medicaid and Medicare analytics teams, improving data processing timelines.
- Analyzed pharmacy benefits utilization and built reports in Tableau, identifying anomalies and helping operational teams recognize and correct 3% of billing errors, leading to a decrease in monthly claim rejections.
- Worked collaboratively with product and compliance teams to map claim adjudication rules, improving consistency in rule application by 18% and reducing manual escalation volumes significantly.
- Developed automated scripts to segment member cohorts by visit frequency, streamlining quarterly risk score tracking and increasing chronic care flagging accuracy by 22%.
- Drafted BRD-like documentation to formalize analytical workflows, ensuring transparency in metric definitions for provider performance reviews, resulting in improved audit readiness and clarity.
- Supported the design and execution of A/B testing for a care outreach program, validating uplift hypotheses and reporting KPIs weekly, contributing to a 6% increase in member response rates.

Data Analyst | Citius Tech, India

Jul 2020 – Jul 2023

- Developed and optimized SQL procedures to monitor patient appointment adherence trends, improving resource utilization metrics and achieving a 12% increase in provider scheduling accuracy across the hospital chain.
- Used Power BI to design and implement dashboards that tracked patient encounters, billing denials, and collection rates, resulting in a 17% reduction in unresolved revenue.
- Led root-cause investigations on repeated billing disputes, aligning data insights with business workflows and reducing payment processing delays by 28% in high-volume departments.
- Collaborated with internal stakeholders to gather reporting needs, define KPIs, and standardize monthly operations summaries for leadership, improving time-to-insight and reporting accuracy.
- Validated EMR data migration outcomes by performing detailed row-level checks and reconciliations between staging and live views, ensuring 99.7% accuracy in post-implementation data.
- Worked closely with cross-functional QA teams to triage logic issues in predictive models, improving false positive rates in chronic care risk flags by 14% through enhanced documentation.

Data Analyst Intern | Sage Softtech, India

Jan 2020 – Jun 2020

- Extracted, analyzed, and processed SKU-level data using Excel and SQL to prepare daily sales trend reports, enabling category leads to monitor weekly outliers and improving inventory management by 10%, while reducing stockouts by 15%.
- Created visual summaries of pricing sensitivity and demand shifts across categories using Power BI, enabling marketing teams to adjust campaigns effectively, increasing seasonal conversion rates by 11%.
- Conducted comprehensive data quality reviews of supplier information across ERP systems, identifying duplications and format errors, contributing to a 19% improvement in master data reliability.
- Mapped discount impact trends across store clusters and built comparison charts for senior management, enabling data-driven procurement planning and improving forecasting accuracy by 20% based on quarterly footfall patterns.
- Contributed to requirement gathering sessions with business leads and collaborated on the development of KPI mapping templates and user guides for inventory variance and logistics dashboards, resulting in a 30% faster report generation.
- Documented logic flows and dataset relationships using simple ER diagrams and process notes, enhancing junior team members' understanding of data source lineage and assumptions, reducing integration errors by 25%.

➤ Education

Masters in Computer Science (Specialization in Data Analytics)

May 2025

Illinois Institute of Technology, Chicago, IL

Bachelors in Information Technology

Jul 2021

Sree Vidyanikethan Engineering College, Tirupati, AP

➤ Certifications

- Google Data Analytics Professional Certificate
- IBM Data Analyst Professional Certificate
- Simplilearn Business Intelligence Fundamentals
- Python for Everybody Specialization from University Of Michigan

➤ Projects

Claims Quality Enhancement with Machine Learning

- Designed a Random Forest model to flag unusual claim patterns, lowering rejection rates by 7% across Medicare and Medicaid data.
- Embedded results into Tableau views to assist teams in early issue identification and correction.
- Streamlined data preparation using SQL and Python, cutting reporting time by 40%.

Operational Reporting and Revenue Monitoring

- Created SQL-based reports and Power BI dashboards to track claim denials and payment delays.
- Accelerated issue resolution by 28% and minimized missed revenue by 17% through clear metric tracking.
- Ensured 99.7% data accuracy during system migration by validating record-level outputs.
