

SAIKRISHNA M

Java Full Stack Developer

msaikrishna1100@gmail.com | 954-264-4476 | [Linkedin](#)

As a full-stack software engineer with over 5+ years of experience, I thrive on building the complete picture, from the deep-seated backend logic to the polished, user-facing front end. My passion lies in bridging the gap between powerful architecture and an intuitive user experience. On any given day, you'll find me architecting scalable microservices with Java and Spring Boot to handle complex business needs, and then switching gears to build responsive, dynamic interfaces with React or Angular that make that power accessible and easy to use. I'm comfortable taking ownership of the entire development lifecycle in a fast-paced agile environment, always with a focus on writing clean, resilient, and high-performing code. Experienced in developing responsive UI with ReactJS and HTML/CSS. Familiar with WordPress plugin customization and CMS integration. Fast learner, currently exploring Adobe Experience Manager (AEM) to expand CMS proficiency.

PROFILE SUMMARY

- Accomplished Full Stack Developer with 5+ years of experience in architecting and deploying enterprise-grade **web applications** using **Java 11+ , J2EE**, and **modern frontend libraries**. Known for engineering secure, high-performing, and scalable systems using **microservices-based architecture**.
- Expertise in building robust, secure, and scalable applications with **Spring Boot (MVC, Security, WebFlux, Data JPA/REST, JDBC)** and **JPA/Hibernate** for efficient web development and RESTful service integration.
- Expertise in front-end technologies including **Angular, ReactJS, HTML5, CSS3, Bootstrap, JavaScript, TypeScript, jQuery**, and **AJAX**. Skilled at building highly responsive, user-friendly **SPAs** and interactive **UI components**.
- Highly skilled in **Java/J2EE** technologies such as **Servlets, JSTL, EJB, JNDI, JMS, JDBC, JAX-RS, JAXB**, and **custom tag libraries**. Adept at designing layered backend architectures with reusable components and seamless **API integrations**.
- Solid understanding of **Node.js** and **Express**, enabling the development of server-side logic and integration layers in full-stack applications.
- Familiar with multi-language environments including **Java 11+, C#, and C++**, and adept at integrating services across heterogeneous platforms.
- Experienced in consuming and exposing **RESTful** and **SOAP web services**, working with **JSON, XML**, and **Swagger/Open API** for robust API design and documentation.
- Well-versed in working with relational databases like **Oracle, PostgreSQL**, and **MySQL**, as well as **NoSQL** systems including **MongoDB, Cassandra**, and **DynamoDB**. Proficient in writing complex **SQL queries, stored procedures**, and managing high-volume datasets.
- Proven capability in building event-driven systems using **Apache Kafka**, and **RabbitMQ** for real-time streaming and asynchronous messaging.
- Experienced in leveraging **AWS services** such as **EC2, Lambda, S3, RDS, DynamoDB, API Gateway** and **CloudFormation** for cloud-based application deployment, infrastructure management, and data storage solutions. Successfully developed and deployed serverless applications and automated infrastructure using **AWS** and **Terraform**.
- Proficient in utilizing **Azure services** including **Azure App Services, Azure SQL Database, Azure Blob Storage, Azure Functions**, and **Azure DevOps** for developing, **CI/CD deploying**, and managing scalable cloud applications and infrastructure.
- Familiar with **Google Cloud Platform** services including **Cloud Run, Big Query**, and **Cloud SQL** for building cloud-native applications with efficient data pipelines.
- Proficient in using **Maven** and **Gradle** for **build automation, dependency management**, and **project management** to streamline the development process and ensure consistent application deployment.
- Hands-on experience in **Linux environments** for deployment, **shell scripting**, and automation of server maintenance tasks.
- Proficient in developing **multithreaded applications** and **debugging** complex memory and performance issues in **enterprise-grade Java applications**.
- Proficient in **object-oriented programming (OOP) principles** and design patterns, ensuring clean, maintainable, and scalable code. Well-versed in **SOLID principles** and best software development practices.
- Worked with **Docker** and **Kubernetes** for **containerization** and orchestration of microservices in production-grade deployments.
- Experience with **API rate limiting** and **exception handling patterns** for scalable, secure services.
- Designed and implemented real-time data pipelines using **Kafka** and **GCP Big Query** for ingestion and processing of structured and unstructured datasets.
- Integrated **GitHub Actions** for end-to-end **CI/CD automation**, enabling **rapid delivery** and **rollback support**.

- Experienced in developing **batch processing pipelines** using **Spring Batch** and integrating financial systems with high-volume data ingestion and transformation.
- Followed **TDD/BDD** practices using **JUnit**, **Mockito**, and **Cucumber** to ensure testable, maintainable code across distributed services.
- Experienced in **Agile** and **Scrum methodologies (SAFe)**, and **Extreme Programming (XP)** methodologies, actively participating in **sprint planning**, **daily stand-ups**, **PI Planning**, and **retrospectives** for continuous software development and delivery.
- Supported and enabled production applications by performing modern debugging and **root cause analysis** to ensure system **resilience** and reliability.
- Authored technical **documentation**, **low-level designs**, **architectural diagrams**, and **interface contracts** to ensure effective knowledge transfer and maintainability.
- Interested in applying enterprise **Java** and **cloud-native full stack** expertise to complex, mission-critical domains such as **airline operations** and **travel services**.
- Passionate about solving **complex challenges**, **mentoring peers**, and **delivering performant, scalable software** in fast-paced development environments, leveraging strong **communication** and **collaboration** skills.
- Interested in applying expertise in building robust, large-scale systems to the challenges of **AI-powered agentic automation**.

TECHNICAL SKILLS

- **Programming Languages** : Java, C++, C#, Reactive Programming, JavaScript (ES 6+), Python, TypeScript, SQL
- **Frontend Technologies** : ReactJS, HTML/HTML5, CSS/CSS3, Bootstrap, Angular, AngularJS 1.x, Angular Material, Karma, Jasmine, jQuery, AJAX, JSON, Webpack, NPM, Jasmine, Redux, NgRx, Webpack, WordPress
- **Backend Technologies** : Java EE / Jakarta EE (EJB, JSTL, Servlets, JDBC, JAX-RS, Apache Camel, JAXB, JNDI), Node.js, Express.js, GoLang, Grunt, Ruby on Rails
- **Frameworks & Libraries** : Spring Boot, Spring MVC, Spring Webflux, Spring Security, Spring Data JPA, Spring Data REST, Spring JDBC, Hibernate ORM, Spring Batch, Apache Commons, SLF4J, HTTP Client, HTTP Core, Spring Batch
- **Databases** : Oracle, MS SQL Server, MySQL, PostgreSQL, MongoDB, DynamoDB, Redis, SQL Server, Snowflake, SSIS
- **API & Web Services** : REST APIs, SOAP Web Services, Swagger/OpenAPI, Postman, Spring Web Client, Rest Template
- **Web Servers & Messaging** : Apache Tomcat, JMS, RabbitMQ
- **DevOps & CI/CD** : Jenkins, Github Actions, Docker, Kubernetes, CI/CD Practices, OpenShift, Prometheus, Grafana
- **Cloud Platforms** : AWS (Lambda, EC2, ECS, S3, SDK, API Gateway, CloudFormation, Elastic Beanstalk), Azure (App Services, Functions, Blob Storage, Azure DevOps, Azure Data Factory), Google Cloud Platform, Cloud-native Saas
- **Testing & Quality Assurance** : JUnit, JUnit 5, Mockito, Integration Testing, Unit Testing, Code Coverage, Log4j, Performance Testing (JMeter), Root Cause Analysis
- **Build, Version Control & IDE** : Maven, Gradle, Git, GitHub, GitLab, Bitbucket, SVN, Eclipse, IntelliJ IDEA, VS Code
- **Security & Protocols** : OAuth 2.0, JWT, SSL/TLS, Encryption & Decryption, XSS Protection, CSRF Protection, Certificate Management, Tokenization, MFA Integration
- **Methodologies & Practices** : Agile (Scrum, Kanban), Test-Driven Development (TDD), Behavior-Driven Development (BDD), Rally, JIRA, UML Modeling, SOA Concepts, Test Automation, Design Patterns

WORK EXPERIENCE

Citi Bank

Palm Beach Gardens, Florida, USA

Java Full Stack Developer

May 2024 - Present

Description: Citi is a leading global bank providing a wide range of financial services to customers worldwide, with a focus on supporting businesses and communities. It is committed to enabling growth and economic progress through responsible financial practices.

Responsibilities:

- Built scalable Java-based **microservices** using **Spring Boot**, **J2EE**, and **Domain-Driven Design** to enhance **Citibank's** transaction processing and core **financial services**.
- Engineered secure backend services using **Java EE**, **Spring Boot**, and **Hibernate**, ensuring low-latency transaction processing and PCI-compliant data handling.
- Developed and published **reusable Java libraries** and **microservice templates** to accelerate development and promote consistency across enterprise applications.
- Built secure **authentication** services using **Spring Security**, **JWT**, and **IAM** best practices.
- Exposed **JPA repositories** as **RESTful** endpoints using **Spring Data REST**, enabling **rapid API** development with minimal boilerplate code and seamless integration with front-end applications.
- Automated unit and **integration** using **JUnit** and **Mockito** to guarantee high code coverage and reliability.
- Designed RESTful Spring **Controllers** for microservices, enabling seamless front-end integration and API-first architecture.

- Assisted in the **migration** and modernization of legacy banking applications to microservices **architecture** using **Java**, **Spring Boot** and **Spring Batch** for scheduled transaction processing.
- Built responsive **front-end** components using **Angular**, **Angular Material**, **Bootstrap**, **TypeScript**, and **AJAX**, delivering optimized **UI** performance and user experience.
- Performed **unit testing** of **Angular components** using **Karma** and **Jasmine**, achieving high **code coverage** and maintaining UI quality.
- Developed complex **SQL/PLSQL** logic and indexing strategies on **Oracle** and **MySQL**, improving query response times in high-throughput financial systems.
- Implemented advanced **CI/CD pipelines** using **Jenkins**, **GitHub Actions**, **Maven**, and **Gradle**, with experience integrating **artifact repositories (JFrog Artifactory)**.
- Explored building high-performance backend services in **GoLang** to prototype scalable microservices.
- Led **sprint planning**, **backlog grooming**, and **Agile ceremonies** using **JIRA**; documented architecture and best practices in Confluence for cross-team collaboration.
- Configured **Docker** containers for local testing and deployed microservices to **AWS EC2** and **Lambda** for scalable infrastructure support.
- Developed batch jobs using **Spring Batch** for scheduled transaction processing, data transformation, and reconciliation.
- Contributed to payment workflows, risk management, and wealth management modules within banking systems including **ACH and wire transfers**, aligning with regulatory and compliance requirements.
- Collaborated across **cross-functional** teams to deliver scalable **cloud-native solutions** using **Agile** and **DevOps** best practices, improving code quality, team velocity, and deployment reliability.
- Worked on modules involving commercial banking domains such as **reporting**, **transaction initiations**, and **internal fund transfers**.
- Engineered **high-throughput**, **low-latency** transaction processing **APIs**, supporting thousands of concurrent users across global banking platforms.
- Collaborated with **product managers** and **frontend engineers** to design **API-first architectures** and optimized data flows, enhancing user experience and performance in high-throughput distributed systems.
- Built automated infrastructure tooling using **Terraform**, **AWS CloudFormation** to improve deployment reliability and operational maturity.
- Collaborated on transaction **risk validation**, **fraud detection**, and **regulatory compliance** systems in **Citi's** banking platforms.
- Configured and administered **WebSphere** Application Server for secure, scalable deployments of enterprise microservices.
- Integrated **RabbitMQ**-based messaging with batch processing to enable real-time and batch hybrid transaction workflows.
- Validated APIs using **Postman** and automated contract tests to ensure reliability and version compatibility across services.
- Created technical **documentation**, **interface specs**, and **deployment runbooks** to support **QA** and **DevOps** teams.
- Provided **L3 production support**, performed **log analysis (Log4j)**, implemented proactive monitoring with **AWS CloudWatch**, achieving **99.99%** uptime for critical services.
- Actively collaborated with **support** and **QA teams** to troubleshoot production issues, assist with software configuration, and manage defect triage using Jira and ServiceNow.

Environment: Java (SE/EE, Multithreading), Spring (Boot, MVC, Security, Cloud, Data JPA), Angular, Angular Material, HTML, CSS, JavaScript, TypeScript, RESTful APIs, Oracle (PL/SQL), MySQL, Docker, Kubernetes, AWS (EC2, Lambda), Postman, Jenkins, Git, GitHub, Maven, WebSphere Application Server, SonarQube, Veracode, JUnit, Mockito, Log4j, Apache HTTP Server, JDBC, JWT, OAuth 2.0, CI/CD Pipelines (GitHub Actions, Jenkins Pipeline).

Brown & Brown Insurance **Java Full Stack Developer**

Daytona Beach, Florida, USA
Sep 2023 - Apr 2024

Description: Brown & Brown, Inc. (Brown & Brown Insurance) is an insurance brokerage firm, specializing in risk management. I participated in deployment processes using tools like Jenkins, GitLab CI/CD, Docker, or Kubernetes. Wrote clean, maintainable code. Created and maintained the unit, integration, and end-to-end tests using tools like JUnit, Mockito, or Selenium.

Responsibilities:

- Developed end-to-end insurance software applications to manage **policy issuance**, **claims**, and **customer data**.
- Created **dynamic**, **responsive Single Page Application (SPA)** frontend interfaces using **React.js** to enhance user experience for agents and customers.
- Built robust backend services using **Java**, **Spring Boot**, and **Hibernate** to process business logic securely and efficiently.
- Built reusable **React** components and integrated **Redux** for state management across insurance modules; optimized React performance via **code splitting**, **lazy loading**, and **memoization**, ensuring cross-browser compatibility and responsive performance across diverse devices.

- Wrote **unit tests** for **React** components using **Jest** and **React** Testing Library to ensure component reliability and performance.
- Designed and consumed **RESTful APIs** to facilitate seamless data exchange between client applications, databases, and third-party services.
- Implemented **scalable, fine-grained role-based access control (RBAC)** and JWT authentication using Spring Security, ensuring secure authorization across large-scale distributed services and compliance with HIPAA and regulatory standards.
- Integrated **Kafka** for asynchronous event processing between services, reducing **API** call dependencies and improving response times.
- Designed **API authentication** flows and onboarding guidelines in line with **Apigee-style API** management.
- **Planned and aligned** with **Product Owners** and **QA teams** in an Agile process to ensure user stories were valuable, testable, and developer-ready.
- Developed comprehensive test suites, including **unit, functional, and performance tests (JMeter)**, to enable the rapid and reliable deployment of code to production.
- Utilized **Docker** and **Jenkins** for **CI/CD** pipelines to ensure smooth **deployments**, rapid **delivery** cycles, and automated continuous integration/delivery.
- Managed data models and optimized SQL queries in **MySQL** and **Oracle** for efficient data retrieval and storage.
- Led efforts in decomposing legacy monoliths into **Spring Boot microservices**, improving deployment agility and modularity of core insurance services.
- Leveraged **GCP Cloud SQL** and **Cloud Run** for pilot microservices deployment in cross-cloud architecture, ensuring fault tolerance and cost efficiency.
- Architected and maintained real-time and batch data pipelines with **Kafka, Spring Batch**, and **Google Cloud Platform (GCP Big Query)**, demonstrating a strong interest in big data processing.
- Authored technical documentation including **API specs, architectural flow diagrams**, and **deployment playbooks** for internal team usage.
- Leveraged **Azure DevOps** to design and manage **CI/CD pipelines** for automated builds, testing, and deployments, including artifact versioning for consistent release management across environments.
- Developed admin **dashboards** for **user management**, system **status monitoring**, and **configuration workflows**.
- Participated in **sprint grooming, story estimation**, and **technical walkthroughs**, **helped grow junior engineers** by providing guidance on modern **software development frameworks** and leading technical discussions to foster a collaborative team environment.

Environment: Java, Spring Boot, Hibernate, React.js, HTML5, CSS3, Bootstrap, GCP, RESTful APIs, SOAP web services, MySQL, MongoDB, OAuth 2.0, JWT, LDAP, Kafka, Junit, Mockito, Maven, Jenkins, CI/CD, Docker, Kubernetes, Selenium.

United Health Groups (Cognizant)

Hyderabad, India

Full Stack Engineer

Mar 2021 - May 2023

Description: UnitedHealth Group, a multinational health services company, specializing in health insurance and health care services. Built and consumed the RESTful APIs and microservices. Integrated the APIs with internal systems and third-party services. Deployed the applications on cloud environments.

Responsibilities:

- Developed scalable and responsive web applications using **HTML5, CSS3, JavaScript, Typescript, Bootstrap, AngularJS** and **Angular Material** enhancing customer experience across policy, claims, and renewal platforms.
- Utilized **Java 8 Streams** and **Lambda expressions** to efficiently process large volumes of insurance data for premium calculations and underwriting decisions.
- Consumed **RESTful APIs** using **AngularJS, NodeJS**, and **jQuery** to enable real-time updates for **policy status, claim submissions**, and **dynamic user data** rendering.
- Configured **Gulp tasks** in **NodeJS** for **CSS preprocessing**, file minification, and live reload, improving developer productivity and reducing build times.
- Integrated backend services hosted on **Amazon EC2** with internal systems, ensuring secure communication with core policy databases and third-party APIs.
- Integrated **Angular** applications with **Node.js/Express** services for seamless end-to-end workflows.
- Designed and optimized microservices architectures with **Kubernetes (EKS)** and **AWS ECS** for containerized deployments.
- Implemented responsive and dynamic UI components using **Angular Material**, enhancing user experience with standardized design elements and improved accessibility.
- Applied responsive **UI/UX** design principles and **mobile-first strategies** to ensure cross-platform compatibility.
- Built real-time data pipelines with **Apache Kafka**, synchronizing transactional data across **MongoDB** and **PostgreSQL**, ensuring data integrity for customer records and claims processing.

- Developed and deployed cloud-native microservices using **AWS services, Terraform, CloudFormation**, and orchestrated deployments via **Docker** and **Kubernetes** clusters.
- Automated **CI/CD pipelines** using **Jenkins, Docker**, and **Kubernetes** to accelerate delivery and improve scalability in **UnitedHealth Group's** cloud-native environment.
- Leveraged cloud monitoring tools such as **AWS CloudWatch** and **Prometheus** for real-time system health checks and proactive issue resolution.
- Integrated **Elasticsearch** to optimize full-text search across **policies** and **claims**; implemented **OAuth 2.0** and **JWT** for secure user **authentication** and **authorization**.
- Utilized **Rally** for **Agile project management**, including sprint planning, user story tracking, and velocity monitoring to ensure timely feature delivery and team alignment.
- Supported **on-call production** incidents as part of a rotating shift, ensuring **24/7** uptime for critical services.
- Mentored **junior developers** on secure **coding practices, RESTful API** design, and **CI/CD** workflows using **Git** and **Jenkins**, improving **code quality** and team delivery speed.

Environment: HTML5, CSS3, JavaScript, jQuery, Bootstrap, AngularJS, Angular Material, NodeJS, Java 8, RESTful, JSON, AJAX, Amazon EC2, SOAP, UDDI, AWS Lambda, MongoDB, PostgreSQL, Apache Kafka, CI/CD, Jenkins, Docker, Kubernetes, Elasticsearch, OAuth 2.0, JWT.

KPMG

Java Developer

Hyderabad, India

Mar 2020 - Feb 2021

Description: KPMG is a global network of professional services firms providing audit, tax, and advisory services to a wide range of industries. With a presence in over 140 countries, KPMG helps organizations navigate complex challenges and drive sustainable growth.

Responsibilities:

- Developed and maintained enterprise-level applications using **Java, Spring Boot**, and **RESTful APIs** to support the insurance company's business operations and customer service solutions.
- Customizing **RESTful** Web Service using **Spring REST API**, sending **JSON** format data packets between front-end and middle-tier controller.
- Worked with **SQL**-based databases like **MySQL** for **data extraction, reporting**, and **analysis**.
- Leveraged **Git** for robust version control and collaborative **code management**, ensuring streamlined **development** workflows and maintaining **code integrity** across project lifecycles.
- Successfully deployed and managed scalable applications on **AWS EC2** instances, implementing **Elastic Load Balancing** (ELB) and **Auto Scaling** to ensure high availability and responsiveness under varying traffic loads.
- Designed and administered **MongoDB clusters** to achieve horizontal scalability and high availability, supporting robust **data storage** and **retrieval** for demanding applications.
- Architected and implemented robust **service layer** components that encapsulated critical business **logic** and **data manipulation**, leading to a more efficient and reliable data flow throughout the application.
- Successfully configured and administered **IBM WebSphere Application Server** on both **Linux** and **Windows** environments, ensuring stable and optimized deployments for **Adobe Experience Manager** (AEM) applications.
- Implemented extensive client-side validations using **JavaScript** to enhance user experience, improve **data quality**, and optimize web application performance by reducing server-side processing for form and navigation interactions.
- Configured and optimized **IBM WebSphere Application** Server deployments for enterprise Java applications in hybrid environments.
- Configured and administered **AEM 6.1** for digital asset management and site component deployment across insurance applications, including custom template integration with **Angular frontend**.
- Built and optimized scalable, modular front-end applications using **Angular**, leveraging **RxJS** for reactive programming and **Angular Material** for consistent **UI/UX** across devices.

Environment: Java 11/17, Multithreading, Exception Handling, JVM, J2EE, MongoDB, GIT, AEM 6.0/6.1, CI/CD pipelines, RESTful API's, JSON, Angular, Angular Material, AWS, EC2, JavaScript, Junit, MYSQL, Adobe Experience Manager, IBM WebSphere Application Server, Spring Boot, Spring Rest API

EDUCATION

Master of Science in Information Technology - **University of Cincinnati**, Ohio, USA | Grade: 3.97/4

CERTIFICATIONS

- AWS Certified Developer Associate
- Oracle Certified Professional Java SE 11 Developer
